Plastics outlook brightens; steady growth forecast

Continued from Page 18

ing introduced by Citroen in Europe introduces the concept of mass production of large reinforced plastic parts by injection molding, another big plus.

Jack R. Misner, of the Fiber Glass Division of PPG, is considerably more optimistic than Cumo. He predicts a 15 percent improvement this year in business for the reinforced plastics trade.

But, he said, the projected recovery still brings the forecast for 1983 only to 1981 levels. It is some 10 percent shy of the peak years of 1978 and 1979, he said.

PPG predicts U. S. car production will rebound from 5.1 million in 1982 to 6.1 million and land transportation's use of the light, tough plastics will increase about 16 percent to over 400 million pounds. That figure jibes with that of Cumo and the trade association.

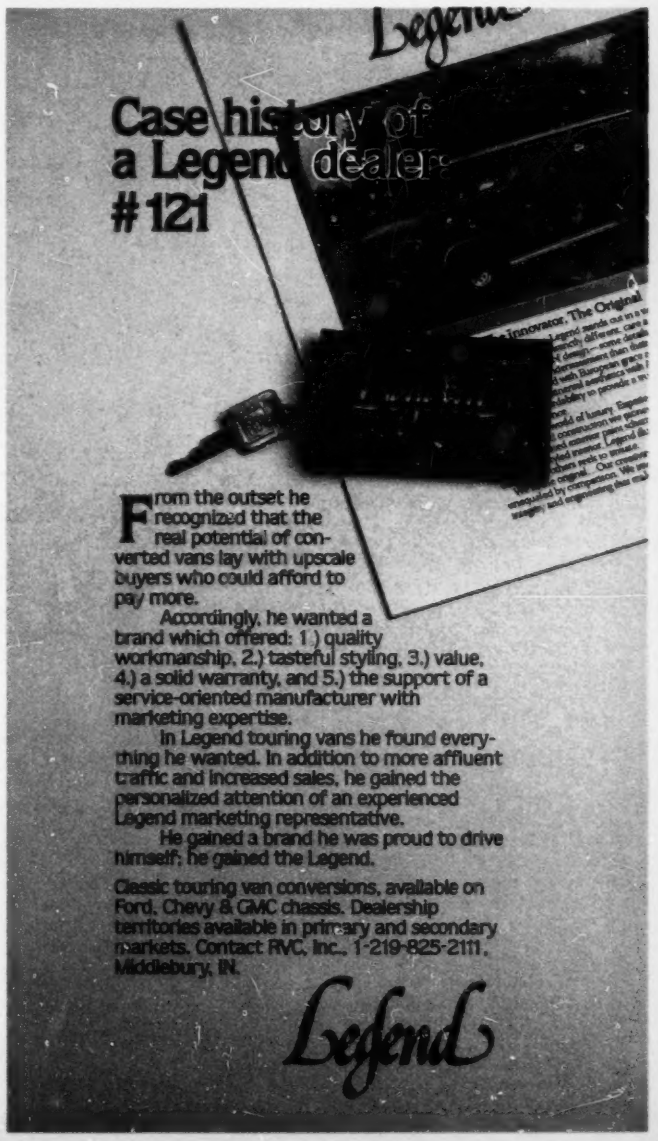
Firm in India, Bendix to build brake systems

Continued from Page 20

be added later for other brake components, and plans are already underway for Phase Two, which will broaden the company's product lines and markets, he added.

India's commercial-vehicle industry is expected to produce 150,000 units annually by 1990. The country supports five truck manufacturers and a sixth company is expected to begin bus production this year, said Reynolds. The joint venture expects to capture a substantial portion of that market, he added.

Plans call for the Jalgaon plant to be in production early in 1984. The plant will use a combination of locally sourced components and those produced internally, with few imported parts, Reynolds said.



A race to trace Swiss deposit

Where is DeLorean's missing $17.65 million?

Continued from Page 1

documents in U. S. Bankruptcy Court in Detroit which said one Swiss bank account had nearly $400,000 on deposit late last year. The documents, letters from Wittmer, indicated that former DMC general counsel and board member Thomas W. Kimmerly had authority to disburse funds from this joint DeLorean Motor Cars Ltd./GPD escrow account.

Wittmer, a Geneva lawyer, was involved in the contract negotiations between DeLorean Motor Co., GPD Services, Inc., and Lotus cars in 1978. He represented DMC; its UK subsidiary, DeLorean Motor Cars, Ltd., and the DeLorean Research Limited Partnership during the negotiations.

Wittmer is willing to disclose the information about disbursements if he can get permission rrom his clients. The receivers of DMCL have consented, but bankruptcy attorneys for DMC, which was the general partner in DRLP, have balked.

Wittmer was contacted in early March at his Geneva office by an AUTOMOTIVE NEWS reporter. He refused to discuss anything relating to the DeLorean matter.

The Swiss bank account records should provide what seems to be the major missing piece in the missing money puzzle.

Clearly, the $17.65 million did not go to Lotus. Court testimony last week by Christopher Hughes, of the London CPA accounting firm Cork-Gulley, which has been receiver for DMCL for more than a year, said Lotus received the equivalent of about $22 million for the entire project, all of which was paid by the British government through DMCL, the Belfast carbuilding unit of DMC. None of it came from GPD, Hughes said.

If the Creditors Committee and the examiner are unable to get DMC's authorization to talk to Wittmer, more litigation could result, either in Bankruptcy Court in Detroit or in Switzerland where investigators might attempt to pierce the veil of secrecy at the appropriate banks.

Virtually all of the parties investigating GPD now believe there is reason to suspect that the $17.65 million was diverted into the personal bank accounts of a few individuals.

Suspicions about what really happened to the money sent to Switzerland escalated late in 1981 when a DMC secretary, Marian Gibson, turned over certain files to British Member of Parliament Nicholas Winterton. Winterton tried to get the British government to launch an investigation.

Included in the files were certain internal memos written by a former DMC vice president, William Haddad, which raised questions about the mysterious Swiss company GPD and other financial matters.

Winterton's allegations were leaked to the press.

John DeLorean publicly dismissed them and then filed a host of UK libel suits after a 10-day investigation by Scotland Yard failed to show any wrongdoing.

DeLorean's suit against Winterton was recently dismissed although the MP still has a suit pending against DeLorean for some of the charges made publicly by DeLorean.

During an interview in London earlier this month, Winterton told AUTOMOTIVE NEWS the British Government instituted a "massive coverup" of the entire DeLorean affair "because the government knew its representatives and representatives of the previous government were guilty of abuse of public funds," referring to the $180 million in British funds put into the project.

Winterton called the short Scotland Yard investigation "a whitewash."

Like so many other aspects of the DeLorean sports car enterprise, the GPD puzzle has become more complex with the passing of time.

In 1978, DMC entered into the DeLorean Research Limited Partnership as the sole general partner. The limited partners, assembled by Wall Street investment bankers Oppenheimer & Co., were to have contributed about $20 million in funds earmarked for R&D as part of the plan whereby the DeLorean car plant would go to Puerto Rico.

Ultimately, the British Government, through its Northern Ireland economic development agencies, offered a better deal to John DeLorean and lured him to Belfast. DeLorean still needed to have pre-production work done on the DeLorean sports car, codenamed DMC-12 at that time.

Although the British representatives told DeLorean he no longer needed to do the Oppenheimer partnership because the government was to be the project's "lead banker," DMC officials proceeded with the partnership offering circular in 1978. Oppenheimer eventually raised nearly $19 million, of which nearly $7 million would be paid back to Oppenheimer in sales fees and a subsequent extended investment banking and asset management contract.

• In November, 1978, it was announced DMC had retained Lotus Cars to do R&D and preproduction engineering work on the sports car. No mention of GPD Services, Inc., was made at that time—the deal was presented as a straight DMC-Lotus transaction.

The first public mention of GPD was made in the DMC form S-2 filed with the U. S. Securities & Exchange Commission on Nov. 29, 1978. The filing said the DeLorean Research Limited Partnership had retained GPD, which in turn had retained Lotus. No copy of the contract was included.

Subsequent mention of GPD intrigued auto officials in the U. S. and Europe; they said at the time they had never heard of a product development company by that name. John DeLorean and Lotus Cars head A. C. B. (Colin) Chapman gave various explanations when asked about GPD and its credentials.

In 1981 interest by British reporters led to disclosure that a Geneva woman, Marie-Denise Juhan, who had signed the contract on behalf of GPD, was in fact the only trace of this company.

GPD Services, Inc., does in

† Volkswagen listed as domestic make since 1981. Includes imports.
††Renault joined domestics in 1982. Average includes imported Renaults and U. S.-built Alliances.

Copyright 1983 Automotive News

Continued from Page 1

from 263 in 1981. Buick nudged Chevrolet out of second place, and Ford surpassed Volkswagen to take fourth place among the domestics.

Other changes among U. S. makes included Mercury climbing over Plymouth into eighth place, while Plymouth dropped to 10th. Chrysler dealers worked their way from next to last to eleventh, Lincoln surpassed AMC, and newcomer Renault squeezed in ahead of last-place Imperial.

Among the imports, Toyota was first for the third consecutive year, followed by Honda and Nissan. Mazda and Subaru remained fourth and fifth, respectively, and Volvo was sixth. Mercedes stayed in seventh as BMW switched places with Audi, climbing to eighth, Audi slipped to ninth. Isuzu remained 10th.

Fiat dropped from 11th to 17th in its last year on the charts as Fiat of North America. Saab, newcomer Mitsubishi and Jaguar moved up.

Five imports notched record sales per outlet in 1982. Volvo hit 185, well above the former record of 159 (1981). Mercedes moved to 161 from its 1981 record of 154. Saab's 60-per-outlet average beat 48 set in 1978. Jaguar topped its 1981 record of 20 sales per outlet with a new 49-per-outlet average, and BMW wiped out its 112 record with a 132 average.

The average sales per outlet for the top 20 imports was 126 in 1982, up from 120 the preceding year. Eight makes improved their averages compared with 1981. Four domestic makes were up and one, Ford, duplicated its year-ago average.

• Average sales per outlet of domestic nameplates featured the Cadillac (Fleetwood/de-Ville) on top of the heap beating out Volkswagen Rabbit for the honor. Cadillac's average was 97, followed by Rabbit's 94. Oldsmobile Cutlass Supreme/sedan was third with 89 sales per outlet, then standard-size Oldsmobile with 86 per outlet and Buick's Regal coupe/sedan at 76.

Ford Escort was sixth with its 72 average, followed by Plymouth Reliant and Buick LeSabre/Electra tied for seventh at 58. Buick Skylark was ninth with 48 sales per outlet, and Dodge Aries was 10th at 46.

A year ago the top 10 nameplates in sales per dealer were: VW Rabbit (160); Cadillac (87); Oldsmobile Cutlass Supreme (83); Plymouth Reliant (78); Buick Regal coupe (71); Buick Skylark (68); Chevrolet Chevette (63); Dodge Aries (62); Oldsmobile Cutlass sedan (58), and Ford Escort (57).

In domestic market class categories, the Rabbit was the top-average subcompact with its 94 sales-per-outlet figure. Escort was second at 72 and Chevette was third at 43.

Reliant held on to first place among U. S. compacts, although it dropped to 58 sales per outlet from 78 in 1981. Skylark, Aries and Citroen were second, third and fourth both years. Pontiac Firebird leaped from 14th to fifth, followed by Chevrolet Camaro, climbing to sixth from 17th.

Oldsmobile Cutlass Supreme/sedan had the best average per outlet among the intermediates in 1982, and big brothers Oldsmobile 88/98 headed the standard-size nameplates list. Cadillac was the best-average luxury nameplate last year, as it was in 1981.

Renault Alliance and AMC Eagle tied for best-average nameplates at American Motors in 1982. Chrysler Corp. celebrated Reliant for Plymouth, Aries for Dodge and LeBaron for Chrysler. Escort was Ford's best seller, Lynx topped Mercury's list and the regular Lincoln nameplate was best for Lincoln dealers.

Buick dealers did best with Regal coupe/sedan, Cadillac customers preferred standard Cadillac models; Chevrolet's best was Chevette; Cutlass Supreme/sedan was the top Oldsmobile, and Firebird averaged highest for Pontiac dealers.

Makers schedule 129,564 cars

Auto production steady for week

By Patricia Hoffman
Staff Writer

With little change in plant schedules, last week's domestic auto production was about the same as the previous week's total, but output jumped 45.92 percent from the comparable 1982 period.

The makers estimated 129,564 units last week, down slightly from the prior week's 129,657, but up from last year's 88,794.

Breakdown for the week by company was: General Motors, 56.93 percent; Ford Motor Co., 22.95 percent; Chrysler Corp., 15.51 percent; American Motors, 2.44 percent; Volkswagen of America, 1.63 percent and Honda, 0.54 percent.

To date there have been 1,400,707 cars assembled this year, a 38.60 percent gain over last year's 1,010,613.

The GM Willow Run facility and Ford's San Jose point were both idle last week (March 21) for inventory control.

Ford's Kansas City plant, idled March 14, remained closed for changeover to the new Tempo and Topaz models. The plant previously assembled Fairmont and Zephyr.

Saturday overtime was scheduled last week at the Ford St. Louis facility.

With the addition of the Belvidere and St. Louis points, all of Chrysler's assembly points were working overtime last week. Belvidere operated two daily nine-hour shifts, and St. Louis worked one daily nine-hour shift. Chrysler's Jefferson and Newark points operated two daily nine-hour shifts for the eighth consecutive week last week.

The GM Detroit plant continued on overtime last week, working 1.6 hours of daily overtime on both shifts.

Beginning May 2, the GM Linden facility, source of Buick Riviera, Cadillac Eldorado and Seville and Oldsmobile Toronado, will increase production from 45 cars an hour to 50 cars an hour on each of two eight-hour shifts. The recall of about 300 laid-off workers will bring the overall employment to about 5,200.

GM slated Saturday overtime at six plants last week. Double shifts were worked at Lansing B,C and G lines (88, 98 and Cutlass Supreme); Flint G line (Regal); Detroit; Doraville and Norwood. The B and C lines at Flint (LeSabre, Electra) and Baltimore worked one shift.

Truck output hits 49,880, highest since last June

Domestic truck production last week hit the highest point this year and was also the highest since the week ending June 26, 1982.

Output last week was estimated at 49,880 units, up 9.27 percent from 45,649 built the previous week and up 13.18 percent from 44,071 finished in the comparable 1982 period. In the week ended last June 26, the domestic makers built 51,412 trucks.

The increase in production last week was attributable to overtime at six plants and the resumption of production at two facilities.

So far this year, the makers have produced 483,984 trucks, a 10.61 percent drop from 437,571 built the same time last year.

All plants were reported working last week (March 21) with the return of the Wagoneer and Cherokee lines at American Motors' Toledo facility, plus Ford Motor's Kentucky point. Both plants were idle for inventory control the previous week.

Saturday overtime was scheduled last week at General Motors' Janesville, Lordstown and St. Louis facilities. The GM Pontiac S-truck line operated six days for the second consecutive week.

Daily overtime was scheduled at both of Chrysler Corp.'s truck plants. The Belvidere point worked two daily nine-hour shifts, while the Warren plant operated on one daily nine-hour shift.

American Bosch name discontinued by United Tech

DEARBORN. — United Technologies Automotive Group announced that it will market its line of diesel fuel-injection systems, fractional horsepower DC electric motors and industrial ignition systems under the trade name "United Technologies," discontinuing the trademark name "American Bosch."

According to Edward J. Rapetti, vice president, Automotive Group, the name change is being made to "identify a broader systems strategy with these products and tie us directly to United Technologies, a name recognized worldwide."

Rapetti said that the two operations responsible for the product lines will be identified as United Technologies Diesel Systems and United Technologies Electro Systems. The two units will continue to be part of the Automotive Group.

United Technologies Diesel Systems, headquartered in Springfield, Mass., produces diesel fuel-injection systems for medium and heavy-duty vehicles. United Technologies Electro Systems is headquartered in Columbus, Miss.

Cars speak French, English but no Welsh

WINDSOR, Ont. — While Welsh nationalists are unhappy that the BL Maestro's voice synthesizer cannot speak their language, there is no reason for Canadians to make similar complaints.

Three of Chrysler of Canada's luxury models offer voice systems in either French or English.

Downtime trims Canadian output to 17,668 cars

Downtime at two more car facilities took a toll on last week's Canadian auto production, pulling output down 23.28 percent from the previous week's total.

Last week the car manufacturers estimated 17,668 units, compared with the previous week's 23,029. Output was also down 7.22 percent from 19,043 built in the comparable 1982 period.

Year-to-date, there have been 220,618 cars assembled, a 19.68 percent gain from last year's 184,340.

Truck production last week was slated at 10,465 units, off 3.72 percent from 10,869 built the previous week, and down 14.35 percent from last year's 12,218.

So far this year, the truck makers have assembled 112,933 units, up 1.64 percent from 111,114 built in the comparable 1982 period.

The American Motors Brampton facility, source of Spirit, Concord and Eagle models, closed last week (March 21) for inventory control. Brampton, which recently cut output from 192 to 160 units a day, is preparing to phase out assembly of Spirit models, scheduled to end completely this month.

Production of Concord models will be discontinued at the plant in April, leaving the Eagle as the only vehicle produced there. A decline in output is expected to continue until a daily rate of 120 units is reached in June.

Ford Motor's St. Thomas point, source of Escort, Lynx, EXP and LN7 models, was idle last week due to overstocked inventory.

The Ford Oakville car plant remains down for changeover to the new Tempo and Topaz models. The facility, which ended production of the Ford Crown Victoria Feb. 21, is slated to resume full production April 11.

All other car and truck assembly points were reported working last week.

Service Index declines after 23 'up' months

By Francis J. Gawronski
Service Editor

The string of 23 consecutive months in which dealership service parts and business has shown an increase over the comparable year-earlier period ended—but just barely—in February.

Dealers' shop business for February, according to the Automotive News Service Index, amounted to 99.5 percent of the volume recorded in the same month last year.

February was the first month since February, 1981, that the dealers' business did not show a gain over the year-ago figure. The February Service Index was 10 percentage points below that registered in January.

Most dealers were hard pressed to explain the dip in business, but some attributed it to the nation's lagging economy. Practically all who were contacted, however, were confident that service and parts business would spring back to the positive side of the ledger.

Despite the slight dip in the Service Index in February, dealers' shop business for the first two months of 1983 increased to 104.4 percent of the business recorded during the same period last year.

Two of the five indicators used in the Service Index declined in February.

Repair orders written in February were down 3.7 percent, while gross profit on all labor, parts and accessory sales — the most important indicator from the viewpoint of dealers — was down 0.5 percent below the year-earlier figure.

Sales of all parts and accessories showed the biggest gain in February, up 0.6 percent over

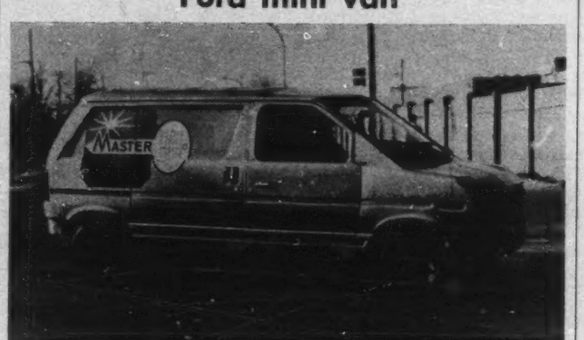
SERVICE INDEX

99.5*

	Feb., '83 vs. Feb., '82	2 mos., '83 vs. 2 mos., '82
Gross Profit on All Labor and P&A Sales	− 0.5%	+ 4.3%
Repair Orders Written	− 3.7%	+ 0.8%
Total Labor Sales (Customer & Warranty)	+ 0.4%	+ 6.3%
Shop Parts Sales (Customer & Warranty)	+ 0.5%	+ 5.0%
Sales of All Parts and P&A	+ 0.6%	− 0.1%

*—Survey by Automotive News shows that dealers' service and parts business in Feb., 1983, was 99.5 percent of business in Feb., 1982. Service business in the two months of 1983 was 104.4 percent of business in the corresponding period in 1982.

Ford mini van



Dearborn preps downsized truck for '85

Despite the rather inventive camouflage, the spy photographer still recognized this "realtor's truck" as a prototype for Ford Motor's new mini van, which bows in 1985. The van will be about a foot shorter than current models and will likely be offered with standard gasoline and optional diesel or turbo-diesel engines. It will compete against Chrysler's T-115 van and a planned entry by General Motors, codenamed the "M" van.

U.S. model total rises to 296 with spring additions

By John K. Teahen Jr.
Managing Editor

When the domestic auto makers finish introducing the cars they'll sell in the 1983 model year, they will have 296 selections, an AUTOMOTIVE NEWS study discloses.

The total will be down slightly from the 307 choices offered in the 1982 model year, but it will be the second highest since 1975.

As has been the case in recent years, the domestic count has risen steadily since the traditional autumn introduction period.

What is different this year is that it's already April 4 and some of the domestic cars that will be counted in '83 sales and production statistics haven't yet appeared in the showrooms.

Last fall, the domestic producers put 271 of their '83 models on display. The total now stands at 278 and there are still 18 to come for the full count of 296.

Maybe the present figure is only 277½. Chevrolet's Corvette has gone on sale in California, but it won't be introduced in the rest of the country until April 21.

• Since last fall, the model total has been buttressed by the arrival of the front-drive Chrysler New Yorker, the Chrysler Town & Country convertible, the Dodge Shelby Charger, three Ford Thunderbirds, two Mercury Cougars, a Lincoln Mark VI and the California Corvette.

Ford Motor has trimmed two selections from the Ford Fairmont line and one from Mercury Capri, so the net gain is seven.

Another 18 models are scheduled for introduction in May, and 12 of them are from Ford Motor — six apiece in the Ford Tempo and Mercury Topaz lines.

Also slated to arrive next month are the Chrysler Executive Sedan and Limousine, the Chevrolet Cavalier and Pontiac 2000 convertibles and the Parisienne sedan and wagon that mark Pontiac's return to the standard-size car field.

Chevrolet calls Corvette an '84 model. That designation will also be applied to Tempo and Topaz, and maybe to the other May flowers as well.

That, of course, is a promotional gimmick, although it probably also has EPA certification significance, too.

But one thing is certain: Any

Price bumped on X 1/9 and Spider 2000

Bricklin outlines marketing plans

By John A. Russell
New York Staff Writer

NEW YORK. — Marketing of Bertone and Pininfarina cars in the U. S. will be done through a system of independent distributors throughout the country under the umbrella of International Automobile Importers, Inc., the importer, according to Malcolm Bricklin, chairman of that company.

In an interview with AUTOMOTIVE NEWS late last week as he was about to board a plane for Italy, Bricklin said the distributor system would be "exactly the same" as the organization he developed when he first broke into the auto business importing the Subaru 360.

He said both cars, the Bertone X 1/9 and the Pininfarina Spider 2000, would carry an identical sticker price of $15,900, but will be "loaded" cars.

When those two cars were sold by Fiat, the port-of-entry price for the X 1/9 was $10,990 and the Spider 2000 was tagged at $12,290.

Bricklin had revealed no details of his marketing plans for the two cars since it was first revealed in January that Fiat Motors of North America would cease marketing automobiles in the U. S. and that the X 1/9 and Spider 2000 would be handled by Bricklin.

• Bricklin said his goal in recent months has been signing distributors and several have been appointed. He would not comment on the exact number or specific locations, saying an advertising campaign designed to attract dealers is in the works and would break in the trade press at the end of the month.

The system of distributors would operate the same as it does at Subaru of America, he said, including the requirement of letters of credit.

Under that system, distributors have letters of credit with the importer paying for the cars when they are unloaded on the dock. This system limits the financial exposure of the importer to the time when the cars are being shipped from the country of origin.

Usually, the importer pays for the cars once they are loaded on the dock in the country of origin, so the maximum financial exposure is limited to the number of days the cars are on the high seas.

The eventual goal is to have nine distributors, with the same number of parts warehouses strategically located throughout the country.

Bricklin denied a recent rumor that out of approximately 400 Fiat dealers in the U. S., only 50 had filed applications to become dealers in his organization. This had led to speculation about the stability of the venture in various quarters, with the implication this was a setback for Bricklin.

He labeled the rumor as "false" and said bluntly that the lack of interest among Fiat dealers in no way jeopardized the venture. Fiat dealers were not a factor, he said, because he had made the decision about the distributorship system beforehand.

Offering franchises to former Fiat dealers was a "matter of courtesy on our part," he said, adding that his main interest is attracting new dealers.

He said that more than 50 former Fiat dealers have filed applications, but did not give the exact number.

Bricklin said he did not want associations with the former operation and really was not looking for former Fiat dealers.

"We have manufacturers who give a damn," he said, and he said he wanted the same at-

Chrysler top-line sedans up $100 to $400

DETROIT.—Chrysler Corp. has added $100 to $400 to the prices of its top-line four-door sedans. The New Yorker Fifth Avenue went up $400 and is now $13,192. The boost was $250 on the front-wheel-drive New Yorker, boosting it to $11,200. Receiving $100 hikes were the Chrysler E Class, now $9,441; the Dodge 600, now $8,941, and the Dodge 600-ES, now $9,472. Equipment prices and destination charges are unchanged.

AMC hikes Alliance prices $100

SOUTHFIELD, Mich. — American Motors has raised the prices of the Renault Alliance $100 per model. Prices now start at $5,695. There was no change in option prices.

Annual meeting is May 12

Profit-sharing plan on agenda at Ford

DEARBORN. — Ford Motor Co. will ask stockholders to authorize a profit-sharing plan in 1983 and 1984 for salaried workers that will match one given to hourly workers in their labor contract.

Profit-sharing payments would be made if before-tax profits from U. S. operations exceed 2.3 percent of sales. The last year that happened was in 1978. If the plan had been in effect in 1978, payments to hourly workers would have been more than triple those paid to salaried workers. Some analysts expect Ford to show a profit in 1983.

The Ford annual meeting will be held in Detroit May 12.

The proxy statement showed Ford Chairman Philip Caldwell received $446,382 in salaries, benefits and other forms of remuneration in 1982. It was up less than a tenth of a percent from 1981. He owned 20,524 shares of common stock on Feb. 18 and held options on another 177,614 shares.

Executive Vice President and Chief Financial Officer Will M. Caldwell received $280,003 in 1982, an increase of 9.2 percent. His stock holdings were reported at 15,754 shares plus 54,843 options.

Thomas C. Page, executive vice president—Ford Diversified Products Operations received $252,280. His common stock holdings were reported at 7,776 plus 39,364 options.

• President Donald E. Petersen received $366,427, an increase of 1.0 percent. Petersen's holdings of common stock were reported at 7,033 shares plus 86,750 options.

Harold A. Poling, executive vice president—North American Automotive Operations, received $356,592, an increase of 22.8 percent. But virtually the entire increase was attributed to a tax reimbursement for his three years overseas. Poling was reported to hold 7,949 shares of common stock and have options on another 55,817.

All 60 Ford directors and officers received $10.77 million in 1982, an increase of 6.1 percent over 1981. The average remuneration increased more because there were more directors in 1981: The average for 1982 was $179,497, an increase of 9.6 percent.

The proxy also revealed that Henry Ford II, who retired as a Ford employe last year, will be paid $170,000 annually for consultation and representation and for his services as director. He agreed to be available to serve as a director and chairman of the finance committee until at least Oct. 1, 1987.

He was reported to own 9,811 shares of common stock and 1.16 million shares of the family-owned Class B stock. His holdings represented 10.6 percent of all Class B stock. Each Class B share will get 6.7 votes at the annual meeting.

Henry Ford II's family is reported to own another 1.23 million shares of Class B stock.

His brother, William C. Ford, is reported to own 38,260 shares of common stock, 30,345 shares of Ford Motor Co. of Canada common stock and 2.23 million shares of Class B stock, representing 20.4 percent of all Class B shares.

His family owned another 1.71 million Class B shares.

Mrs. Walter B. Ford, sister of Henry and William, was reported to hold 1.97 million Class B shares, or 18.1 percent of the total. Her family held another 853,049 Class B shares.

The three Fords are also trustees, with voting rights, to another 540,143 Class B shares.

3 wheels, 2 speeds, 100 MPG

Appropriately named the Gashopper, this three-wheeled, 220-pound transportation device delivers up to 100 MPG, according to Bolt-on Parts, Inc., Miami. The two-seater has a monocoque body, independent suspension, a two-speed transmission, tiller steering and 30-MPH speed capability, the company said. It will sell for about $2,000.

Chevy's Toledo plant shifted to Hydra-matic

By Marjorie Sorge
Labor Editor

In a move to further centralize its divisions, General Motors has transferred management responsibility of its Toledo automatic transmission plant from Chevrolet to the Hydra-matic Division.

GM President F. James McDonald said the transfer of operating responsibility for the Toledo plant is another step in the reorganization of the transmission manufacturing facilities which began with the transfer of Chevrolet's Warren (Mich.) manufacturing plant to Hydra-matic in 1980.

Over the past several years, GM has done a great deal of consolidating and closing non-competitive plants. It has put all the foundry operations under its Central Foundry Division and will give Fisher Body control over all but one body assembly plant by 1985. The only remaining body plant working in conjunction with a car division's home plant will be the Oldsmobile plant in Lansing.

Currently, the only transmission plants outside Hydra-matic are two Chevrolet plants in Parma, O. (automatic transmissions), and Muncie, Ind. (manual transmissions), plus a Buick operation in Flint.

The Buick plant is scheduled to phase out the production of three-speed transmissions for rear-wheel-drive cars at the end of this model year. The plant will continue to produce GM's 125 transmission for front-wheel-drive intermediate and compact cars.

In addition, the Buick facility will continue to supply components and sub-assemblies to other Hydra-matic facilities. According to a Buick spokesman, that plant currently supplies about 40 percent of component and sub-assembly needs.

Buick will also produce a new transmission for front-wheel-drive full-size vehicles for 1984.

• According to a GM spokesman, there are no current plans to put any of those plants under the Hydra-matic umbrella.

The shift in responsibility at Toledo will not affect any of the three independent plants and, according to McDonald, was made to permit GM "to make further improvements in the efficient use of our transmission design, manufacturing and supplier facilities."

Hydra-matic also has management responsibility for a manufacturing plant in Strasbourg, France. The division will continue to coordinate work with the operations at the Windsor (Ont.) facility which is run by GM of Canada.

New appointments at the Toledo plant include: Thomas R. Zimmer, director, product and process engineering; Richard L. Selvala, director, reliability and manufacturing engineering; William C. Brown, director, materials management and planning, and Robert F. Perry, director, manufacturing and engineering systems.

GM, NHTSA explain X-car fix on brakes

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Both General Motors and NHTSA last week issued explanations of the fix finally decided upon for any rear brake lockup on some 240,000 '80 X-body cars. Cost is estimated at some $30 million.

Although the two statements disagree somewhat on details, it is clear that GM is going beyond what it first anticipated because the simplest lockup fix might put the parking brake out of compliance with the stringent 30-percent incline hold.

Letters begin going out to owners April 4, but cars will not be coming in for repairs until after April 25.

In August, 1981, GM changed the proportioning valve on 47,000 cars with manual transmissions — a move it then thought was adequate. GM will now replace rear brake shoes with less aggressive lining, lubricate or replace, if necessary, the parking brake cable and inspect front brake linings and replace them, if necessary, to get the whole system in balance.

Labor time to service the cars — Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark — will take 2½ to 5½ hours.

• According to NHTSA head Raymond A. Peck, who made an initial finding of defect on Jan. 14, "This is a very serious safety-related problem. There should be no question in anyone's mind that owners should return these vehicles to the dealership for correction when they receive their recall notice."

As of a few weeks ago, GM has had 27 product liability suits. Of those, GM has lost one, settled three out of court and won or had dismissed three others.

Peck has been criticized for not moving faster after NHTSA's Office of Defect Investigations discovered that the initial fix would not do the job and that the braking lockup occurs in cars with automatic transmissions as well as with those with manual transmissions.

Rep. Timothy Wirth, Colorado Democrat, has asked the General Accounting Office — Congress' watchdog agency — to investigate alleged delays at NHTSA.

Meanwhile, at the urging of the Center for Auto Safety, Peck is continuing the investigation into some 276,000 additional X-body models to see whether they have braking problems.

The cars that GM is fixing will meet all safety standards when they are fixed — even the extremely stringent parking brake mandate, although in real life many cars probably would fail after a short time in use.

MVMA, of which GM is a member, has petitioned to have the 30 percent incline requirement reduced to 20 percent — close to the intention of the requirement of the Common Market countries.

Chrysler chief blames bank interest rates for sales slowdown

Iacocca: Maybe no gain till summer

By Jay McCormick
Crain News Service

CHICAGO. — Like early crocuses, car sales started to sprout during a late winter warm spell but have been nipped off by a cold economic climate, according to Lee Iacocca, Chrysler Corp. chairman.

It may take until summer for car sales to start growing again even if conditions improve, he said. That could mean continued rebate and special loan rate programs from the car companies.

In a good news-bad news speech at a press conference here, Iacocca noted that inflation, gas prices and the prime rate are all down but the nation's deficit, unemployment and small business bankruptcies all continue at high rates.

"Even though the President of the United States and others are saying, 'Let's get euphoric, things are turning around,' they ain't turning around too fast," he said.

He laid much of the blame for stagnating car sales at the feet of banks, where consumer loan rates remain high above the prime rate.

"You've got to continue pressure on getting the banking system to pick up where Ford, General Motors and Chrysler leave, and that's a subsidized rate of 10.9 to 11.9 percent at the consumer level," Iacocca said.

• "I was hoping this would happen by spring. I now have my doubts and wonder what I'm going to have to do this spring because I'm not getting any help. So I'm going to have to use my own captive financing company, Chrysler Finance Corp., which is not as well heeled and strong as some for the other companies.

"That presents a problem for me. It also presents a problem for car sales all spring if banks will not get back into the consumer loan business.

"In a bad economy, the car

Computers won't alter this

Volvo parts operation accents personal touch

By John A. Russell
New York Staff Writer

ROCKLEIGH, N. J. — When working with dealers, the Volvo parts service department has emphasized the personal touch, and the company does not intend to abandon this attitude in the age of computers.

Mitchell A. Duncan, vice president and general manager for parts, said that six years ago, when the company was considering revamping its parts ordering systems, it was felt that while the computerized communication networks had much to offer, there was more to be gained by the relationships developed on a system built on people. Consequently, the company went to a three-tiered system very similar to airline reservation systems. Duncan said that the company is considering adopting the computer communications network for stock orders, but that would be several years down the road.

Today, Volvo's customer service department uses three levels of personnel. Parts orders, whether stock or emergency, are handled through an order interpreter who takes the order from the dealer and enters it into the computer.

If a question develops on the application of the part, the call is shifted to a parts specialist who can help the dealer's parts staff select the right part for a particular case. If there is a complaint or problem, this is referred to the customer service coordinator.

• Duncan is a firm believer in managing the exceptions and he added that when the company does go to a computerized system for placing stock orders there will be a provision for the handling of exceptions.

Computers, according to Duncan, "can only replace manual labor, they cannot replace certain levels of staff."

Duncan believes that the key to dealer loyalty when it comes to parts is service. The parts customer service department is only one segment of the entire system which includes quality, price competitiveness, terms and conditions and the parts warranty.

To maintain dealer loyalty in buying parts from Volvo, Duncan said that the entire package counts, but the personal touch is very important.

Bricklin outlines marketing plans

Continued from Page 1

titude from his own distributor and the dealer body.

• Bricklin has been interviewing advertising agencies for his campaign, though at press time no decision had been made. The campaign itself will explain the new operation, the manufacturers and the cars as well as the distributor and the new management.

For IAII, Bricklin said he is looking for a president to head the operation. Bricklin will be chairman of the board.

The product will have undergone changes by the time it reaches the U. S. shores. The first cars are expected by the end of this month.

Bricklin was critical of Fiat's pricing of the two cars because, he said, both cars cost "exactly the same" amount to build. Under his pricing structure, the cars will have identical stickers and both will be loaded.

There will be all-leather interiors, power windows, special wheels and special paint as well as air conditioning and AM/FM/stereo.

The cars coming into the country will be '84 models.

All will carry rust perforation warranty, a three-year paint warranty and a two-year unlimited mileage vehicle warranty, he said.

Bricklin said that now that both Bertone and Pininfarina have control, more than 150 modifications have been made on the cars.

Bricklin is looking toward having the dealers make high grosses on the cars, and building the organization to serve the customer.

He maintained that a car selling for nearly $16,000 would make the customers expect more and, in turn, he wants dealers who will provide top service.

Bricklin said 1,000 dealers throughout the country was an absolute maximum number but did not go into the minimum numbers. He also stated flatly that there would not be any more than 2,000 cars of both cars imported per month.

With the organization rapidly coming together, Bricklin said, there would be future announcements about staffing that would surprise many people. The company is looking toward Northern New Jersey near the New York state border to locate its headquarters. Why?

"This is where the really experienced people are and a lot are available," he said, referring specifically to those who did not travel with Volkswagen of America in its move to Troy, Mich., as well as other companies. Most of the major European importers are located in this area of New Jersey.

His own company, the parent of IAII, Bricklin Industries, will be located in New York, but Bricklin stressed this would be a small office for the parent company alone.

Missouri dealer crackdown decreases ranks by 16 pct.

ST. LOUIS. — Missouri Revenue Director Richard A. King has announced the elimination of 1,066 automobile dealers, most of them used-car operators, from the state's registered rolls.

As a result of the increased screening of dealers to "enforce compliance" with Missouri statutes governing dealer conduct and standards, King indicated that the number of Missouri's registered dealers had been reduced from 6,350 to 5,284.

King said the 16.79 percent reduction in licensed dealers for registrations processed for the current calendar year is evidence of the Department of Revenue's attempts to protect Missouri consumers from fraud and abuse relating to modification of odometer readings, transfers of stolen vehicles and reconditioning of flood-damaged vehicles.

King said that he is doing his best to stop dishonesty.

Earlier this year, King announced that 20 dealer licenses had been revoked during 1982 and 14 dealers had been barred from applying for 1983 licenses as a result of violations of Missouri law governing dealer registration, odometer readings or consumer rights.

King is trying to change Missouri's image. He said that the state had been called "the national dumping ground for clocked titles." He is cooperating with law enforcement officials and the insurance industry.

King told the Midwest Anti-Auto Crime Assn. that the reduction in the state's registered dealers is due, in a large part, to the Missouri Revenue Department's enforcement of state laws protecting consumers from unscrupulous dealers.

"We have significantly reduced the number of dealers who are taking advantage of individuals purchasing automobiles," he said. "I believe this clearly demonstrates that aggressive administrative action can make a difference."

He noted that 135 additional dealers are being investigated by the Criminal Investigation Bureau of the Missouri Department of Revenue or the State Highway Patrol. These investigations may result in the filing of criminal charges or additional dealer license revocations.

In addition to cracking down on dealers, the department has "tightened up" regulations on practices associated with title services, automobile auctions and salvage yard operators.

Beginning in September, 1982, the Missouri Department of Revenue initiated a crackdown on violations involving automobile titles. Particular emphasis was placed on eliminating titles containing fraudulent odometer readings, forged or altered titles and titles for stolen vehicles.

Beginning July 1, Missouri will get laminated titles "that can't be copied," King said.

Titles are no longer issued to automobiles without proper odometer readings, King said. Also, the department has increased inspections and audits to ensure that fraudulent titles are not issued.

GM must recall 500,000 '78 cars for emission flaw

WASHINGTON. — General Motors will have to recall more than 500,000 of its 1978 cars to repair a defect that is causing them to fail federal requirements for control of oxides of nitrogen emissions, under an order issued by the EPA.

The models affected are the 1978 V-8 Chevrolet Malibu, Monte Carlo and Monza; Pontiac LeMans, Grand Am and Sunbird; Buick Regal and Century and Oldsmobile Starfire. California models are not included.

EPA has determined that these vehicles emit an average of 2.5 grams per mile of oxides of nitrogen, which is 0.5 gpm more than is permitted for 1978 models by the Clean Air Act. Neither GM nor EPA know why the cars are exceeding the allowable limit.

GM has 45 days in which to come up with a remedial plan or to request a hearing.

Including this recall, some 770,000 cars have been recalled for emission problems since Jan. 1, 1983. Last year, more than 1.3 million cars were recalled for that reason.

Service Index declines a bit

Continued from Page 1

last year's figure, while shop parts sales (those used on customer-paid and warranty work) were up 0.5 percent. Total labor sales (customer-paid and warranty) increased 0.4 percent.

Figures used in the Service Index are averages compiled from reports on shop operations submitted by a cross-section of the nation's new-car dealerships.

For the two-month period, labor sales was the leading indicator with an increase of 6.3 percent over the year-ago volume for the same period, while shop parts sales increased 5.0 percent.

Gross profit showed an increase of 4.3 percent during the January-February period, while repair orders were up 0.8 percent and sales of all parts and accessories increased 0.1 percent.

That's below 1982's 307, but is second-highest since 1975

Domestic-car model count is trimmed to 296

Continued from Page 1

of those so-called '84s that are built and sold during the '83 model year will be counted in its manufacturer's production and sales figures for the '83 model year.

Production of some '83 lines has concluded or is about to end: AMC Spirit and Concord, Chrysler Imperial, Ford Fairmont, Mercury Zephyr. Those nameplates, which are not scheduled to be built in '84, will be out of production by the time the last of the '83-model-year cars are introduced. They are included in the '83 model count because dealers still have some of them in stock.

• The 296 selections for the '83 model year consist of 136 from General Motors, 94 from Ford Motor, 43 from Chrysler Corp., 16 from American Motors and seven from Volkswagen. The AMC total includes the six Renault Alliance models built in the U. S.

By market class, the 296 models are made up of 89 compacts, 78 intermediates, 62 subcompacts, 28 standard-size cars and 29 luxury cars.

A breakdown by body styles shows 113 four-door sedans, 138 two-door sedans, coupes and hatchbacks, 37 four-door station wagons and eight convertibles.

Mercury, with 41, offers the most models for the '83 model year, followed by Ford, 40; Buick, 37; Pontiac, 33; Oldsmobile, 30, and Chevrolet, 27.

Totals for other domestic makes are Dodge, 19; Lincoln, 13; Chrysler, 12; Plymouth, 11; AMC, 10; Cadillac, 9; Volkswagen, 7; Renault, 6, and Imperial, 1.

104,797 built; all plants closed Good Friday

4-day week trims auto production

By Patricia Hoffman
Staff Writer

Although last week's Good Friday holiday pulled domestic car output down 22.36 percent from the previous week's total, output for the year to date remained substantially ahead of last year's period.

During four days of assembly last week, the auto makers scheduled 104,797 units, down from 134,975 built in the previous five-day week, and down 1.84 percent from 106,761 cars assembled during five days in the comparable 1982 week.

To date, the manufacturers have finished 1,510,915 units, a 35.30 percent gain from last year's 1,116,679.

Only one facility was reported idle last week (March 28) with five plants working overtime.

Ford Motor's Kansas City plant remained closed for changeover to the new Tempo and Topaz models. The facility phased out production of Fairmont and Zephyr March 14. Full operations are slated to resume in April.

The General Motors' Detroit point worked 1.6 hours of daily overtime last Monday and Tuesday, with normal eight-hour shifts resuming Wednesday.

Also on overtime were all of Chrysler Corp.'s assembly plants. The Belvidere, Jefferson and Newark facilities operated two daily nine-hour shifts three days last week. The St. Louis point worked one daily nine-hour shift, also three days. Normal eight-hour operations resumed at all four plants on Thursday.

Downtime is slated this week (April 4) at GM's Willow Run and Wilmington facilities. Both points are closed one week for inventory control.

DeLorean seeks cut in bail; U. S. wants to increase it

By Matt De Lorenzo
Los Angeles Reporter

LOS ANGELES. — Attorneys for John Z. DeLorean and the federal government are expected in U. S. District Court here today (April 4) to haggle over the $5 million bail securing the release of the former auto maker.

DeLorean faces charges that he conspired with two others to distribute 100 kilos of cocaine.

He was initially released on $10 million bail secured by $250,000 in cash and by property owned by DeLorean and his wife, Cristina Ferrare, in California, New York and New Jersey. His attorneys were able to get that amount cut in half earlier this year.

Defense attorneys are reportedly seeking to have the bail cut in half again and moved from secured to unsecured status.

That change would free the remaining properties pledged for the bail and use the $250,000 cash posted by DeLorean to insure his appearance at the trial. The trial is scheduled to begin April 19.

Government attorneys, on the other hand, are seeking to increase the bail, although documents specifying the amount and the reasons why have been sealed by Judge Robert M. Tagasuki.

However, reports that have surfaced indicating that DeLorean is attempting to sell Logan Mfg., a Utah-based maker of snow-grooming equipment, may be behind the government's move.

DeLorean's attorneys argued in an earlier bail reduction hearing that the high amount was threatening that operation.

The defense said a bank, later identified as Continental Illinois, was considering pulling its $7.5 million line of credit to the operation because DeLorean had pledged his property for bail—a move that the bank said violated its credit agreement with DeLorean.

Honda Prelude price up $1,550 for '83

GARDENA, Calif. — Prices of the 1983 Honda Prelude coupe are $9,645 with five-speed transmission and $9,995 with automatic transmission and power steering.

The five-speed version is $1,650 more than the 1982 model, and the automatic is up $1,550.

Canadian car output rises as Ford St. Thomas returns

The resumption of work at Ford Motor's St. Thomas facility offset last week's Easter holiday downtime and upped Canadian auto output 2.18 percent from the previous week's five-day total.

The auto makers targeted 17,745 units during four days of assembly last week, up from the prior week's 17,367, but down 3.78 percent from the 18,443 cars built during five days of production in the comparable 1982 period.

Year-to-date, the manufacturers have assembled 238,062 cars, a 15.93 percent gain from last year's 205,352.

Truck output, held back by the four-day work week, was 8,129 units, down 19.28 percent from the previous week's 10,070, and down 30.01 percent from last year's 11,614.

To date this year, there have been 120,667 trucks completed, a 2.38 percent drop from 123,605 built in the comparable 1982 period.

American Motors' Brampton facility remained closed last week. Assembly of Spirit was discontinued at the end of March. Production of Concord models will be phased out by the end of April, leaving the Eagle and SX-4 as the only vehicles produced at Brampton. Output of Eagles will be cut from two shifts to one shift in June.

Also idle last week was Ford's Oakville car plant. Oakville, which had been the source of Crown Victoria models, closed Feb. 21 for conversion to the new Tempo and Topaz. Full production is scheduled to resume there April 11.

Ford's St. Thomas facility returned last week following a week of downtime to cut overstocked inventory.

General Motors' Oshawa No. One point will resume second-shift operations today (April 4). Output there will be upped to 720 units a day as a result.

All car and truck facilities were idle last Friday (April 1) in observance of the Good Friday holiday.

Makers assemble 36,790 trucks in 4-day week

Because of holiday downtime, last week's domestic truck output fell 25.79 percent from the previous week's five-day total. Output was also down 14.56 percent from the comparable 1982 period.

The truck makers scheduled 36,790 units during four days of assembly last week, down from 49,578 the previous week, and also down from 43,060 units built during five days in the comparable week last year.

Year-to-date, the manufacturers have finished 520,472 units, up 8.13 percent from last year's 481,349.

All truck assembly points, with the exception of American Motors' Toledo (Jeep) facility, were reported operating four days last week. AMC's Toledo plant was idle due to overstocked inventory.

All facilities were closed Friday (April 1) in observance of the Good Friday holiday.

Shrinking 'C'

Buick Electra downsized, has FWD for '84

Buick will lop nearly two feet and 1,000 pounds off its Electra line for the 1984 model year. The new front-drive six-passenger car, shown in this unofficial photo, will bow this fall with standard V-6 engine. Electra is one of the GM C-bodies (along with Oldsmobile 98 and Cadillac deVille). Electra and 98 will be built at GM's new Wentzville (Mo.) assembly plant, and 98 and deVille will be built at the new Orion Township (Mich.) plant.

Will build H-car at Sterling Heights in 1984

Chrysler buys VW plant

By Marjorie Sorge
Labor Editor

Volkswagen of America and Chrysler Corp. are in the real estate business together again.

Late last week, the two companies signed an agreement in principle for Chrysler to buy VWoA's semi-completed Sterling Heights (Mich.) assembly plant for an undisclosed amount. The plant will build the new H-car, a front-wheel-drive four-door sedan, beginning in 1984. Output will be about 60 an hour on a single shift basis.

The front-wheel-drive New Yorkers may also be added to the lineup depending on market conditions next year, a Chrysler spokesman said. Other models could also be added.

The H-car was to go to the company's Jefferson Ave. plant in Detroit, but that facility is currently building at capacity, working overtime every Saturday for the last 10 weeks. Consequently, a company spokesman said, Chrysler needed more capacity to meet future needs.

Jefferson builds the Reliant, Aries, Dodge 400, LeBaron, Dodge 600, Caravelle and Chrysler E-Class.

Chrysler was also quick to point out that the addition of another plant will not result in the closings of any other facility.

The sale of the Sterling Heights plant also will not effect VWoA's domestic manufacturing. According to a VWoA spokesman, the company is "firmly committed to the U. S. market as a manufacturing base."

VWoA has another assembly plant in Westmoreland, Pa., which it purchased from Chrysler in 1976. The purchase price of that facility was $250 million of which VW paid $55 million while the State of Pennsylvania and other parties provided the balance.

Chrysler began building that facility in 1968. It finished initial construction in 1970 but never completed the plant.

In a similar manner, VWoA never opened its 2.75-million-square-foot Sterling Heights assembly plant which it purchased from the U. S. Army in 1980 when Rabbit sales were high and the company felt it needed more capacity.

Rabbit sales in 1980 reached 177,106 but dropped to 162,445 in 1981 and then to 91,166 in 1982. For the first three months of 1983, Rabbit sales were off 21.7 percent from last year.

According to a VWoA spokesman, the sale of the Sterling Heights plant will "free up" resources and allow them to be redirected into improving the dealer market and product areas.

The sale can be compared to a land contract deal. Chrysler will make annual payments to VWoA over a 12-year period. VWoA retains the plant as collateral.

The sale is subject to the approval of the boards of directors of both companies and the Chrysler Federal Loan Guarantee Board which must approve all Chrysler purchases over $10 million.

A spokesman for the loan board said it has not yet received the complete proposal and would not comment on the purchase plan until it had reviewed it.

• VWoA acquired the Sterling Heights plant, a former missile plant site, from the Army in a swap. In exchange for that building, VWoA constructed two new office buildings for the Army at a cost of $20.8 million. In addition, VWoA then said it would invest about $300 million in the plant for renovation. About 80 percent of that renovation plan has been completed, but that does not include tooling.

Chrysler will invest more than $160 million in the plant before it begins production in 1984. About $132 million will go for processing equipment and another $28 million for employe training and pre-production costs.

Chrysler is also hoping that a tax abatement granted VWoA by the City of Sterling Heights will be continued. That abatement offers tax forgiveness for 12 years on improvements to the building and a 50 percent tax cut for 12 years on additions.

Chrysler plans to hire 1,600 hourly workers at Sterling Heights for a single shift. Those workers will be represented by the UAW and an agreement will be negotiated between Chrysler and the union, the company said.

According to the UAW, the union will be talking to Chrysler about its future plans for Sterling Heights and the corporation during the next several weeks. It is possible that laid-off workers at other Chrysler facilities could be eligible for the jobs at Sterling Heights.

Chrysler sold its idle Lynch Rd. plant in Detroit last December to the City of Detroit for $10. That facility had been closed since 1981. According to a Chrysler spokesman, the plant was "obsolete and it was cost-prohibitive to convert it."

Mild sales upturn puts domestic inventory at healthy level

New-car stocks dip to 55½ days

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory dropped during March as the sales rate began to warm up even while temperatures through much of the country didn't.

The April 1 domestic new-car inventory totaled 1,235,313 units, a 55½-day supply, compared with 1,248,384 a month earlier, a 68-day stockpile. A year ago, the industry had 1,246,648 new cars in stock April 1, which was a 58½-day supply.

While the sales upturn during March was no barn-burner, the modest gain was enough to bring most lines into a good inventory situation and, in fact, even produce a few shortages.

All corporate makers except Volkswagen of America trimmed their U. S.-built stocks during the month. In fact, all but VWoA opened April with inventories under the 60-day level which has come to be thought of as ideal.

General Motors had a 54-day supply of new cars April 1, down from 66 days a month earlier. The GM stocks included rather short supplies of Oldsmobile Cutlass and 88 models.

Ford Motor Co. opened April

Table on Page 49.

with a 56½-day supply, down from 71 days a month earlier. Ford had just about sold out its Granada/Cougar stocks and was running low on Fairmont and Zephyr, which are also on the way out.

Chrysler Corp. had a 57-day supply April 1, down from 70 days March 1. Chrysler's stockpile was extremely well balanced between its various lines, particularly when compared with just a few years ago, when the corporation's sales bank would not only balloon its inventory but often distort it.

American Motors had a lean 58-day supply with which to open April, due largely to the sales success of its Alliance. VWoA had a 95-day supply, little changed from 93 days a month earlier, while American Honda had not yet built much of a stock of U. S.-produced Accords, carrying a 25-day supply into April.

The April 1 domestic inventory was divided this way: GM, 57.01 percent; Ford Motor Co., 23.68 percent; Chrysler Corp., 14.06 percent; AMC, 3.19 percent; VWoA; 1.86 percent, and Honda, 0.20 percent.

A month earlier, the domestic inventory was divided as follows: GM, 57.29 percent; Ford Motor Co., 24.13 percent; Chrysler Corp., 13.25 percent; AMC, 3.44 percent; VWoA, 1.71 percent, and Honda, 0.18 percent.

By size class, the April 1 stockpile was pretty well balanced, but still leaner on the big-car end. The industry had a 66-day supply of subcompacts,

Truck industry seers confident of an upturn

By Jack Walsh
Truck Editor

For three years, the truck industry has been looking for a reversal in the downturn in heavy-truck sales that started in 1980. Despite the optimism that prevailed each year, the results were disappointing.

Once again, industry experts are confident of an upturn. But the consensus this time is that any sales increases in 1983 will be small and gradual, with any noticeable improvement unlikely before the third quarter.

The industry is hopeful that a strengthening of the general economy in the first half will be great enough to offset a wave of confusion growing out of federal approval of changes in excise taxes, adoption of uniform size and weight limits and higher user-fuel taxes.

Some fleet operators already have indicated they will delay purchases of new trucks and trailers until the changes are more clearly defined.

On the positive side, John B. Curcio, president, Mack Trucks, Inc., said "Mack foresees a very gradual improvement in sales for 1983, as the U. S. economy moves slowly in the direction of recovery."

• On the negative side, James F. Lambert, North American field sales and marketing manager, Rockwell International, doesn't think industry sales this year will be as high as last year.

"The recession that began in the industry four years ago is still with us, and probably will remain so through our 1983 fiscal year (which ends Sept. 30)," he said. He added that the industry still hasn't felt the full impact of deregulation and intensified world competition.

With indications of an upturn

It wants changes, improvements

NADA presses Ford on lifetime guarantee

WASHINGTON.—NADA said it has pressed Ford Motor Co. for improvements in the company's Lifetime Service Guarantee Program and that it continues to seek additional changes in certain provisions of the program.

Since the LSG Program continues to be adjusted to meet dealer needs, NADA has not taken a position on its merits, said Frank E. McCarthy, NADA executive vice president.

He said NADA urges dealers to make their own decision about the voluntary program based upon local needs and situations.

The Ford Line Group of NADA's Industry Relations Committee has approached Ford for improvements in the program and for clarification of some unresolved issues.

NADA said this dealer input, in conjunction with the Ford and Lincoln-Mercury Dealer Councils, has produced improvements in the program since it was originally announced to dealers.

For example, NADA said, Ford has agreed to a provision which will permit dealers to resign from the program with Ford absorbing their contingent liabilities for a one-time fee.

• In a bulletin to dealers, NADA said dealers should realize that if they participate in the program, they are responsible to the service customer as a "warrantor."

"This means that when issuing the Ford LSG warranty, dealers may not disclaim warranties, even if state law normally allows such disclaimers," NADA said.

Many dealers, according to NADA, have been confused about the possibility of setting up reserves under this program and the tax treatment which would be accorded to such reserves.

"While the Internal Revenue Service has not made any ruling in this matter, it appears doubtful that reserves can be deducted from current income," NADA said. "Each dealer should be certain to consult his tax advisor about the accounting and tax status of this program."

NADA also advised dealers to check with their insurance carriers to be certain that any liability incurred under the program would be covered under their insurance policies.

NADA said it will continue to review the program with dealers and with Ford and will inform dealers about potential liabilities. The Ford Line Group will monitor dealer experience with LSG to determine if additional program changes should be sought, NADA said.

Kamei's wind-cheating Scirocco

Improved aerodynamics and the resulting gains in handling and fuel economy are the benefits of the Kamei X1 Scirocco kit, which adds a front-grille insert, spoiler, side skirts, rear pan and front-fender windsplits. Kamei Auto Extras, North Haven, Conn., calls its wind-tunnel-tested X1 the "complete car styling concept."

1st step taken to force huge recall by GM

WASHINGTON.—The government has taken its first step toward forcing General Motors to recall and fix millions of intermediate-size vehicles which allegedly may lose a rear wheel when a retaining C-lock on the rear axle falls out of the groove.

Potentially involved are 2.7 million to 5.3 million '78, '79 and '80 models. The nameplates are Chevrolet Malibu, Monte Carlo and El Camino; Pontiac LeMans and Grand Prix; Oldsmobile Cutlass and Cutlass Supreme; Buick Regal and Century, and GMC Caballero.

In announcing the initial finding of a safety-related defect, NHTSA also set the date of the public hearing. It is scheduled for 10 a.m., May 4 in Room 2230 at NHTSA.

NHTSA said it knows of 64 alleged accidents and 11 injuries involving axle shafts with thin rear end buttons. There have been 58 reported cases where axle shafts with thin end buttons separated completely from the vehicle.

NHTSA added that while there is no easy way to know whether the end buttons are "thin," knowledgeable mechanics or dealers can make such a determination by checking axle play. An earlier GM recall of 1971-72 Vegas covered axles with end play of more than a twentieth of an inch.

The government is asking for more information on this alleged problem either by letter or to its hotline — 800-424-9393 or at 426-0123 in the Washington metropolitan area.

By Toyota, Nissan, Mitsubishi, Chevy Truck and AMC

New incentive programs launched

By Joseph Bohn
Marketing Editor

Toyota, Nissan, Mitsubishi, Chevrolet truck and American Motors instituted new rounds of incentives last week.

Toyota's new program is called "Turn it on." It runs from April 4 to June 1, and offers dealer cash incentives of up to $700 on trucks.

Dealers have a total-truck objective for the two-month period. Zero to 40 percent pays nothing, 41-90 percent pays $300 per truck and 91 percent and over pays $500 per truck.

If a dealer hits 40 percent of his truck objective by May 3, he receives $150 per truck on all April sales, retroactively.

Additionally, dealers receive $200 extra on all diesel units they sell during the contest period. The program covers all new '82 and '83 trucks.

American Motors launched new incentives and low-interest financing to remain competitive with other domestic firms.

From April 6 to May 31, AMC is offering retail financing of 9.9 percent on Renault Fuego and Turbo Fuego models on contracts up to 36 months and 11.9 percent on 37-48 month contracts.

On Alliance, AMC continues offering 11.9 percent financing on contracts up to 36 months, and 12.9 percent on longer contracts up to 48 months.

The AMC program allows financing either through participating local banks, savings and loan institutions or credit unions or through American Motors Financial Corp.

The rates cover cars delivered by May 31 or ordered by April 30.

AMC is also offering incentives on Renault Le Car and 18i, AMC Spirit, Concord, Eagle and SX/4 and Jeep Wagoneer.

Dealers receive a wholesale incentive of $200 on every Le Car or 18i they purchase from AMC from April 6 to May 31. They also receive $500 for each Le Car or 18i they retail during the period, after a one-unit qualifier.

During the same period, dealers receive a $500 retail incentive on every Spirit and $1,000 on every Concord they sell, with no qualifiers.

During April 6-30, dealers receive $700 for every SX/4 they retail and $1,000 for every Eagle. AMC also extended its free soft top offer on Jeep CJ and Scrambler through May 31.

Chevrolet launched a new April 1-Sept. 21 dealer cash incentive on medium-duty trucks. The program covers '82 and '83 models, excluding school bus chassis and dealer demos.

It pays dealers a flat $1,000 per unit sold during the period, plus offering 12.9 percent financing.

Nissan essentially extended its 9.9 percent financing program for another two months. It's been on since Oct. 10, 1982.

The latest extension, "Sell-a-Bration," runs from April 6 to May 31. It offers 9.9 percent APR financing up to 48 months on all new and unused '82 and '83 trucks.

Nissan will pay lending institutions the difference between their normal rate up to 15 percent and the 9.9 percent.

Mitsubishi's new program runs April 1-30. It covers all Mitsubishi trucks, except Mighty Max, a price leader, and Montero, a new sport utility vehicle.

Essentially, dealers get $350 per truck for zero to 99.9 percent of objective and $450 per truck, retroactively back to the first unit sold, for 100 percent and over.

Japanese use Ziebart to protect autos in Asia

TROY, Mich.—Japanese-made vehicles delivered for assembly in two Southeast Asian countries are now being rustproofed with the Ziebart process by international licensee of Ziebart Corp.

According to E. J. Hartmann, Ziebart International president, an estimated 23,000 cars and trucks shipped to Malaysia and Indonesia will be processed annually with Ziebart rustproofing.

Rustproofing is applied in these countries during the assembly of complete knockdown (CKD) kits manufactured by Nissan Motor Co. and Mitsubishi Motor Co. in Japan.

Tan Chong Motors, located in Kuala Lumpur, Malaysia, is processing all commercial vehicles and 40 percent of Nissan cars imported in CKD form into that country.

Kramayuda Kesuma Motors in Jakarta is applying Ziebart sealants to all Mitsubishi cars assembled in Indonesia.

Coachmen unit names Johnson president

MIDDLEBURY, Ind.—William Johnson has been named president of Viking Formed Products, a unit of Coachmen Industries, Inc.

Johnson, who joined the company in 1974, will be responsible for all fiberglass reinforced plastics operations.

Timken to speak at Hall of Fame annual dinner

MIDLAND, Mich. — W. R. Timken Jr., chairman of Timken Co., will be the speaker at the sixth annual Detroit Metropolitan Area Chapter and Automotive Hall of Fame dinner.

The dinner will be held May 19 at the Hyatt Regency Hotel in Dearborn.

Also on the program will be presentation of the annual Award for Young Leadership and Merit and the Industry Leader of the Year Award.

Tickets are available from Automotive Hall of Fame, Inc., P.O. Box 1742, Midland, Mich. 48640. Telephone (517) 631-5760.

Amusement park displays Dodge, Plymouth imports

VALENCIA, Calif. — Chrysler Corp. imported vehicles are an attraction at Six Flags Magic Mountain, a vacation and amusement facility here.

Six Flags, which draws more than 2.5 million visitors annually, maintains three displays of Dodge and Plymouth imports.

Featured are the Plymouth Colt, Plymouth Sapporo, Dodge Colt, Dodge Challenger and Dodge Ram D-50 pickup truck.

Parking lot personnel wear Dodge and Plymouth import logos on their uniforms and park guests are told of the car displays during a tram ride from the parking lot to the gate.

"This program allows more than 2.5 million guests at Magic Mountain to see our products in a relaxed atmosphere associated with family fun," said Clark J. Vitulli, Chrysler Los Angeles zone sales manager.

Evans named to head GMAD Oklahoma plant

WARREN, Mich.—J. W. Evans has been appointed manager of the General Motors Assembly Division plant at Oklahoma City. He has been production manager there.

Evans succeeds James R. Peters, who has been assigned to the staff of the division general manager. Peters is serving as project manager for the joint manufacturing venture between GM and Toyota at Fremont, Calif.

Citroen powers Trihawk two-seater

Hawk Vehicles, Dana Point, Calif., builds the three-wheeled Trihawk, a two-seater propelled by a 1.3-liter horizontally-opposed four-cylinder Citroen air-cooled engine. A five-speed transaxle transfers power to the rear driving wheel. The fiberglass body Trihawk weighs 1,380 pounds and rides on a 98-inch wheelbase.

58th year — No. 4962

AUTOMOTIVE NEWS (USPS 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson Avenue, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation, 48911.

U.S. considers 5-mile bumper for its autos

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — If the government's purchasing agent decides that the 5-MPH bumper is a smart buy, it will be included in specifications when contracts are put out for bids.

Since government drivers report all accidents and virtually all damage is repaired, the government is in an excellent position to evaluate the economic value of the bumper.

At present, '83 models are split between 2.5 and 5-MPH bumpers since the decision to rescind the 5-MPH bumper was late in coming from NHTSA.

If the General Services Administration, the government's buying agent, decides on the 5-MPH bumper, it should favor Ford Motor Co. which has retained 5-MPH systems. But Chrysler could upgrade its 2.5-MPH bumper by strengthening the shock absorbers or using stronger ones. And General Motors has some models that meet the 5-MPH standard.

Finally, all cars made in Canada and brought into this country under the U. S.-Canadian auto agreement meet the 5-MPH requirement which is mandated in Canada.

Currently, most new government cars are Chrysler K-cars although GM also has been a successful bidder.

In the past, American Motors, which qualified as a small business, was an active bidder but it lost out because its cars could not meet the government's fuel economy requirements. The Renault Alliance has not yet made a bid for government business.

The government's decision depends on whether accidents are always reported, whether damage is always repaired and the worth of the time and inconvenience to have the repair made.

In August, the government will hold its usual industry conference and decide on the specifications for government buying.

Deceptive delivery truck

It may look like a vintage delivery truck, but underneath the 1920s replica skin is a modern Ford Motor chassis. The vehicle was built by Asquith Motor Carriage Co., Ltd., United Kingdom. The company feels there is a market for as many as 100 of the trucks per year, at home as well as in other European countries and the U. S.

Interim rules cover truck-excise changes

WASHINGTON. — Temporary regulations concerning the excise tax on heavy trucks, floor-stock credits or refunds and consumer credits or refunds with respect to certain tax-repealed articles have been issued by the Internal Revenue Service. They were effective April 1.

The regulations are needed by manufacturers, producers, importers, dealers, retailers and users of trucks, truck trailers, truck parts and accessories and lubricating oil sold to a dealer before Jan. 7, 1983, and held for sale "on the first moment" of January 7.

Regulations relating to the retail excise on heavy trucks are effective for sales made on or after April 1; those for floor-stock credits or refunds for tires apply to tires sold to a dealer before January 1, 1984 and held by a dealer for sale on the "first moment" of Jan. 1, 1964.

• The temporary rules cover a number of areas: Dropping of the 10 percent excise tax on certain truck chassis, bodies and truck trailers. The excise is eliminated on straight trucks up to 33,000 pounds GVW. The levy is increased to 12 percent as of April 1, collectible at retail, on trucks over 33,000 pounds GVW and all tractors.

Repeal of the excise on parts and accessories took effect Jan. 7.

However, if an owner, lessee, or operator installs them on vehicles taxable under the 12 percent tax and the installation occurs within six months after the vehicle is placed in service, the tax falls on the price of such part and accessory and its installation.

Moreover, the owner of the trade or business installing the part or accessory is liable for the tax. But the tax does not apply if the part or accessory is a replacement or if the aggregate price, including installation, does not exceed $200.

Seven sections provide rules dealing with dealer floor stocks and consumer credit refunds relating to excise-free articles held by dealer until Jan. 7; for certain trucks and truck trailers sold to ultimate purchaser after Dec. 2, 1982, but before Jan. 7, 1983; rules for finding out the amount of tax paid for these various articles; rules on how to treat demonstrators for purposes of floor stocks or consumer refunds.

Also, there are rules for credits or refunds for manufacturers who paid tax on various articles; rules for determining floor stocks and consumer credits or refunds for leases and installment sales; and rules for floor-stock credits or refunds for tires, inner tubes, and tread rubber on which a tax will be lifted as of Jan. 1, 1984, but not those whose tax is reduced as of Jan. 1, 1984.

Ford plant seeks new work, accepts change in overtime

By Marjorie Sorge
Labor Editor

Workers at Ford Motor Co.'s St. Thomas (Ont.) plant have agreed to changes in overtime scheduling in order to vie for production of the standard-sized Ford Crown Victoria and Mercury Grand Marquis.

According to a Ford of Canada spokesman, the plant was told that if changes were not made, production of the Crown Victoria and Grand Marquis would definitely not be assigned to that operation.

The decision regarding the site of that production is still not final but will be made within the next couple of weeks, he said. The Crown Victoria formerly was assembled at the Oakville (Ont.) plant, which is being converted to Tempo-Topaz production. The '83 Grand Marquis has not been built in Canada.

In order to enter the running for the two lines, workers at the St. Thomas plant have agreed to increased overtime. In the past, overtime was restricted to one hour a day Monday through Thursday. Under the new agreement, it can be scheduled two hours a day during that period for the next 18 months.

The company can still schedule Saturday overtime for the day shift only. If those workers don't want the additional work, the afternoon shift must be canvassed to fill in.

The UAW in Canada has taken a hard line on concessions to the auto makers, but a union spokesperson said this package is not considered a concession, only a change. According to the union, because of its tough stand, Ford did not come with a shopping list of concessions, only with a single change.

If the St. Thomas plant is awarded the Crown Victoria and Grand Marquis, it will continue with production of the subcompact Lynx, Escort and LN7. The plant would then need retooling for the new large models and could not open before the 1984 model year, Ford said.

Ford names Novell in Northeastern sales

TETERBORO, N. J.—Philip N. Novell has been appointed regional sales manager for Ford Division's Northeastern region. Formerly the division's New York district manager, he succeeds Patrick A. Brescia, who has retired after 36 years service with Ford.

Novell joined Ford Motor Co. in 1961 at Ford Division in Dearborn. Since then he has held numerous sales and marketing positions.

Month's closer is best in 4 years

Car sales ease ahead of year-earlier total

By Jenny L. King
Staff Writer

Clinging to the coattails of their best late-March sales in four years, domestic auto makers surpassed year-ago March sales by some 25,000 units and finished the first quarter of the calendar year 4.01 percent ahead of 1982.

Imports weren't excluded from the sales action. They enjoyed their highest monthly total since March, 1981, and notched a record penetration of the March market at 26.86 percent. Several imports reported record March sales and three—Saab, Jaguar and Isuzu — had their best any-month totals.

Domestic new-car sales for March numbered 600,303, up 4.29 percent from 575,608 a year ago. Imports climbed to 220,479 from 201,072, an increase of 9.65 percent.

The industry total in March was 820,782, up 5.68 percent from 776,680 a year earlier.

First-quarter domestic sales reached 1,456,920, up 4.01 percent from 1,400,690 last year. Import sales for the first three months were 587,198, up 8.45 percent from 541,441. Total new-car sales in the U. S. for the first quarter were 2,044,118, up 5.25 percent from 1,942,131 in 1982.

• March 21-31 domestic sales were the strongest since 1979, with each of the car makers enjoying its best 10-day total of the calendar year. Late-March sales totaled 264,963, up 11.82 percent from 236,959 a year ago and reminiscent of better days for the industry. It was the highest total for the period since 363,006 in 1979.

For the period, American Motors sales were up 150.97 percent, Chrysler Corp. was up 21.09 percent, Ford Motor Co. was up 15.14 percent, General Motors was up 5.53 percent and Volkswagen of America was off 29.13 percent. Honda had no year-ago domestic comparison.

There were 10 selling days March 21-31, yielding a daily selling rate of 26,496, compared with an average of 26,329, from nine selling days a year ago.

For the full month, GM dealers retailed 351,166 new cars, up 0.47 percent from 349,506 last year. Ford was up 3.38 percent, to 139,779 from 135,506. Chrysler climbed 13.11 percent, to 82,150 from 72,627.

American Motors reported sales of 18,285, boosted by sales of more than 13,000 Renault Alliances. The total was up 108.87 percent from 8,278 a year earlier. Volkswagen of America had a disappointing month, dropping 36.67 percent, to 6,325 from 9,987. Sales of Honda Accords built in Ohio numbered 2,598.

Tables on Page 49

GM sales accounted for 58.50 percent of the domestic market in March, down from 60.72 a year ago. Ford earned 23.29 percent, down slightly from 23.49 percent. Chrysler climbed to 13.68 percent from 12.62 percent. AMC soared to 3.05 percent from 1.44 percent, VWoA dropped to 1.05 percent from 1.73 percent and Honda picked up the remaining 0.43 percent of the March, 1983, shares.

• Only five U. S. makes failed to match their March, 1982, sales totals this time around. Imperial was down 15.03 percent, Chevrolet was down 13.36 percent, Pontiac was off 7.79 percent, AMC (excluding Alliance) was down 40.17 percent and VW was down 36.67 percent.

Plymouth dealers sold two more cars this March than they did in 1982. Chrysler was up 56.18 percent; Dodge was up 2.09 percent; Ford was up 0.63 percent; Mercury was up 6.69 percent and Lincoln was up 21.82 percent.

Buick was up 3.97 percent, Cadillac was up 40.77 percent and Oldsmobile was up 14.77 percent.

With 27 selling days this March and last, the 1983 daily selling rate of 22,233 was up 4.29 percent from 21,319.

The foreign auto makers had a number of success stories in the U. S. this March. Jaguar, Isuzu and Saab reported their best months ever, Jaguar and Isuzu more than doubling year-ago totals and Saab up 52.41 percent. March sales records were set by Mercedes-Benz, Nissan and Volvo.

Toyota was up 3.48 percent over last year, Nissan was up 4.23 percent, Honda was up 1.23 percent, Mazda was up 14.66 percent, Subaru was up 7.02 percent. Volkswagen was up 33.44 percent, Porsche was up 68.80 percent, BMW, 8.38 percent, Alfa Romeo was up 68.42 percent.

Imports accounted for a record 26.68 percent of the March market, up from the previous record of 25.90 set a year ago.

• First-quarter domestic sales were up 4.01 percent, to 1,456,920 from 1,400,690 in 1982. Two years ago, first-quarter results were 1,732,792, so the 1983 sum was not overwhelmingly successful. In fact, except for 1982, it was lowest since 1961 when only 1,212,237 new cars were sold.

For the first three months of

Tasca participates in assembly-line inspections

Dealer on quest for Ford quality

By A. S. Plotkin
Staff Correspondent

SEEKONK, Mass. — It was a familiar routine for Bob Tasca.

He shoved his metric gauge into the narrow space between the car's front door and fender. This time it showed that the fit met his high standard, and he beamed his approval to the Ford Motor Co. vice president at his side.

For Robert F. Tasca, automotive quality is like a personal Holy Grail. The public's perception of quality, he insists, is what sells cars.

He has often taken similar measurements at his automobile dealership in this small town near the Rhode Island state line.

But this time he was not in Seekonk. He was in Lorain, O., suit coat off and sleeves rolled up, standing next to a long line of machinery where 1983 Mercury Cougars were being put together.

Other auto dealers, who are members of advisory committees, are on occasion invited to talk to corporate brass or to visit auto makers' plants. But Tasca, according to Ford officials, is the only dealer who is regularly asked to join official scheduled inspection parties on the assembly lines.

He is a good businessman, a crackerjack mechanic and no shrinking violet.

Tasca owns a successful Lincoln-Mercury dealership in New England. He took over a losing factory-owned dealership in Seekonk 12 years ago after a personal sales pitch from his old friend Lee Iacocca, then Ford president.

But even before then, a fairly close relationship had begun to flourish between dealer Tasca and the No. 2 domestic auto maker.

Now, with three grown sons helping to run his L-M dealership, the 56-year-old Tasca can spend some of his time poking around the company's assembly plants or hobnobbing with Ford VIPs.

• His role as unofficial plant consultant and trouble shooter is unique.

One Ford vice president said, "We call him an advisor. He's a big help to us. He does more than any other dealer."

Tasca refuses payment for his factory trips, and it was only about 18 months ago, he said, that he started accepting reimbursement for travel expenses. He usually visits three plants every two months, and is often accompanied by top company officials, some of them longtime friends.

In that group, Tasca includes Don Petersen, Ford president; Harold (Red) Poling, executive vice president for North American Automotive Operations, and William Scollard, vice president, body and assembly operations.

Scollard, in a phone interview from Dearborn, conceded that Tasca's first inspection visits, starting 2½ years ago, generated some apprehension, even suspicion. But now he is welcomed both by management and assembly line workers.

Some of Tasca's Lincoln-Mercury competitors in the area say that he has a big ego and that the trips provide psychological compensation of a sort. They also gripe that Ford reciprocates with special favors.

But none of Tasca's competitors deride his technical expertise or his intense striving for product quality. On the plant inspection trips, he said he looks for "the little things that a retailer like me would see and that an engineer or a factory man might not see."

With gauge in hand, the burly (six feet-plus, 250 pounds) kibitzer will pounce on a fit in a car body he thinks is not right.

"I will look at the hood, the trunk deck, the doors and fenders, to see if they fit OK," he said.

"I point out squeaks, rattles and interior fits," he said. "For example, moldings that don't line up properly. Or screws missing from the dashboard. In other words, I am giving the guys at Ford the showroom input; that is where I become a plus for the company."

Ford advisors

Robert F. Tasca, left, a Lincoln-Mercury dealer in Seekonk, Mass., and auto body specialist Mario Tella told Ford that customers complained that it took too much effort to close car doors. The men demonstrated how they would handle the problem and, as a result, Ford developed a training program for workers involving the proper fit of doors.

Tasca displays the zeal of a true believer in Ford's corporate virtue. He said he makes the long inspection trips "because I am so dedicated. When the company makes a profit I get a thrill."

He said he is convinced that Ford cars built in the U. S. are now fully as good as, or better than, the imports.

"I am so damned proud of their accomplishment, that I have been a part of it, that I helped make it better," he said.

But when describing his own career as a dealer and his motivation, Tasca's rhetoric can make even his friends at Ford wince.

As when he said, "Now we're on the brink of building the best cars in the world. But for years the American car makers got away with murder.

"They built lousy cars, big and frilly. We fooled the public. In their selfishness to earn money, they neglected what the market wanted. Ford copied General Motors.

"We learned our lesson the hard way," he continued. "The imports, especially the Japanese, did it better. They took the market over. Henry Ford and I disagreed constantly.

"I never had a confrontation with him. Our relations were always casual and friendly. But I wanted Ford to build smaller, more-efficient cars. And his attitude, like that of the other domestic makers, was 'the bigger the better — build as many as you can, make as much money as you can.'"

(Tasca formerly sold Ford Division cars in Providence.)

"Since 1958," Tasca said, "I was telling the people at Ford they had to build a better car.

"I thank God the imports came. They woke us up. We would still be building lousy cars if they hadn't come. The Volkswagen Beetle had quality.

"For a while, Detroit said it was an illusion that the imports were better. Hell, it wasn't an illusion. They had a better car. So I made up my mind to do something about it, or get the hell out of the business. I had nothing against the imports except that I'm an American and I wanted to sell American products," he said.

• Tasca said that Ford now makes a car that is the equal of or better than imported cars.

Scollard took issue with Tasca's use of the word "lousy" to describe earlier Ford cars.

"He gave us his point of view," he said, "but I wouldn't consider our product to have been lousy."

Poling added, Tasca "tells us how the dealers view things; also, how his customers view our products. We don't get that kind of input every day."

Tasca, Poling said, "is the one who convinced us to develop a strategy of tighter fits, or margins (the space between body components like doors, fenders and hoods). He's an expert. He's been doing it for years for his customers. We thought of doing it at his sug-

Domestics up, but imports take record share

Registrations top year-ago month

By Jenny L. King
Staff Writer

Combined registrations of new domestic and imported cars in January climbed substantially from the year-ago total, but they were below those of two years ago and were third lowest in the past 10 years.

According to statistics from R. L. Polk & Co., January new-car registrations numbered 595,294, up 16.19 percent from 509,189 the preceding year and up 9.15 percent from 545,386 in December, 1982. January registrations two years ago, in 1981, totaled 636,488.

Best January total in the past decade was 828,618 reported back in 1973. Lowest was 509,189 in 1982.

Registrations of domestic cars reached 404,256, up 15.40 percent from 350,295 the preceding January, and down 5.38 percent from 427,238 a month earlier.

Imported cars set a January record in market penetration. They accounted for 32.09 percent of the month's total, erasing the old record of 31.21 percent set in January, 1982. New-import registrations totaled 191,038 this year, up 20.23 percent from 158,894 a year ago.

Ford Motor Co. was the only domestic auto maker to show a gain in market penetration in January. Ford was up 1.73 percentage points, to 17.11 percent from 15.38 percent last year. Imports were the other segment to increase, up 0.88 percentage points, to 32.09 percent from 31.21 percent.

• General Motors dropped 1.85 percentage points, to 41.59 percent from 43.44 percent. Chrysler Corp. dipped 0.16 percentage points, to 8.20 percent from 8.36 percent. American Motors was down to 0.98 percent from 1.58 percent, and miscellaneous domestics remained steady at 0.03 percent both years.

In the domestics-only market, GM cars accounted for 61.24 percent in January, down from 63.15 percent last year. Ford had 25.19 percent, up from 22.36 percent. Chrysler earned 12.08 percent, down from 12.15 percent. AMC dropped to 1.45 percent from 2.29 percent, and miscellaneous domestics slipped to 0.04 percent from 0.05 percent.

Market-class comparisons for January, 1983, vs. January, 1982, revealed intermediates, standards and imports taking shares away from subcompacts, compacts and luxury cars.

Intermediates jumped to 24.41 percent from 20.67 percent (145,300 vs. 105,263). Imports edged to 32.09 percent from 31.21 percent (191,038 vs. 158,894). Standard-size cars were up to 12.22 percent from 10.31 percent (72,769 vs. 52,484).

Subcompacts dropped to 9.63 percent from 14.39 percent (57,314 vs. 73,263). Compacts dipped to 16.12 percent from 17.52 percent (95,968 vs. 89,206), and luxuries had 5.53 percent, down from 5.90 percent (32,905 vs. 30,079).

Subaru's income increases 15 pct. in first quarter

PENNSAUKEN, N. J. — For the first quarter of its fiscal year, Subaru of America's net income increased 15 percent to $12.3 million from $10.7 million, according to the company.

Robert Reich, executive vice president for finance and treasurer of the corporation, said that the increase was based on sales of $278.2 million compared with $269.2 million in the first quarter of 1982.

This is the eighth straight year that the company has reported a gain in the first quarter. The net income represents $2.04 per share as opposed to $1.77 for the same period in 1982.

Reich attributed the gain to the change in model mix of the product to accent the higher end of the line, investment income and the operations of its subsidiaries.

Despite the voluntary quotas imposed by the Japanese Ministry of International Trade and Industry, Reich said that the company expects the gains to continue for the year.

Lou Fusz Motor plans fourth golf tournament

ST. LOUIS.—Lou Fusz Motor Co., representing Mazda, Subaru, Pontiac, Datsun, Dodge and Toyota, is increasing the purse for its fourth Lou Fusz St. Louis Open to $23,000.

The golf tournament, which will benefit a charity for the first time, will be held July 22-24.

Import veteran Marshall still solid with Peugeot

In 25 years, he's seen just about all

By Matt DeLorenzo
Los Angeles Reporter

LONG BEACH, Calif.—Twenty-five years ago, the Dodgers, fresh from Brooklyn, were playing their first baseball season in Southern California at the Los Angeles Coliseum.

Frank Marshall, owner of Import Auto Sales and Service, remembers the year well. He was on his way to a game in May when a truckload of what the driver termed "P-quats" appeared at the Hermosa Beach import car dealership Marshall managed.

The "P-quats" were Peugeot 403s, and thus began Marshall's long association with the car make. That association followed him as general manager to the Long Beach dealership that he now owns, having turned it into an exclusive Peugeot point in 1976.

Referring to himself as a "class historian" on Peugeot and other European import marques in the U. S. over the past quarter century, the tall, bespectacled Marshall's warm, friendly style belies his scholarly appearance.

Looking back on the heyday of European imports' first foray into the U. S. market during the late 1950s and early '60s, Marshall says just about every foreign company, some familiar today and others obscure, jumped at the chance to sell their wares here.

Among the cars sold by Marshall were Renault, Sunbeam, Rover, Peugeot and Hillman, Marshall sold just about every make available except BMW and Toyota, and he is able to laugh these days about not taking on those two.

"In 1960-'61, everyone was unloading everything," Marshall said, noting it was somewhat akin to a free-for-all. Then the big shakeout came. The import market, having suffered its first major setback in the mid-60s, didn't begin to come back until the late 1960s. "Anything that wasn't good, was blown out of the market," he says.

Marshall took control of Import Auto Sales in 1965, and built his business steadily, primarily with Peugeot, Renault, Saab and Subaru. The previous owner, having started the store 11 years earlier, felt he had been through all the cycles and, therefore, because he was still in business was a success. It was time to leave the business a success and move on.

Marshall, however, says things have changed. Merely surviving does not mean success in his book.

"Either you get real big or you stay small," in order to be profitable in this business, according to Marshall. Comparing himself to a maitre d' of a fine, small restaurant, Marshall says he has found success in building his business on a personal one to one relationship with his customers.

As a result, the shift to an exclusive Peugeot point was a logical move. He phased out of the Saab and Subaru business because "it was a high volume/low gross situation. By getting out of that, that's where we became exclusive. Under the concept we can better serve our customers and ourselves. The capital funding is less, because we don't have to carry the other lines' parts and tools, our advertising budget is small and we have the pleasure of working with one manufacturer instead of two or three or four. You also don't become a millionaire," he laughs.

Marshall, who is president of the Peugeot dealer council this year, takes a personal and active role in his dealership, selling cars and taking care of customers' problems himself. "We have a strong service reputation. Service comes first, sales sustain service," he said. Parts are also important, so important that Marshall's dealership is listed in phone books in Hawaii and he sells a number of parts to customers there through mail order.

The product itself provides a unique sales challenge for Marshall since buyers (who, over the years are predominantly professionals like doctors, lawyers and engineers) hang onto their cars for quite some time.

"If I were a Chevrolet dealer, I would be three to four times larger because of turnover of repeat buyers," Marshall said. "It used to be that domestic owners would turn their cars over every two to three years. In France, they have the concept of willing the car to someone.

"If I sell a car," he continues, "I can't anticipate selling a car to him for five or six years." However, Marshall sees car buying generally moving toward the buying patterns of his traditional customers. "The evolution is coming and the realization of things is that it is an investment in transportation rather than a peer group badge."

It is these new buyers, those seeking investments in transportation, that Marshall is seeking in the market of the '80s, although he still has plenty of room to sell to old friends.

"It gets to be like family," Marshall says. "I'm selling cars now to children of my old high school classmates. I feel I'm part of the community and I like the market I'm in."

Dodge Aries goes to school

Dr. Allen T. Bonnell, president, Community College of Philadelphia, signs for the delivery of a damaged 1983 Dodge Aries, which Chrysler donated to the school's automotive technology department. The car's roof was sheared off while on a carrier going under a low overpass. Witnessing, from left, are Ronald R. Rupp, Chrysler Service and Parts Operations; Charles Fareira, who heads the school's auto program, and Corrine Caldwell, of the school's mathematics, physical science and engineering division.

Ford replaces GM Holden's as Aussie market leader

SYDNEY, Australia — After dominating the industry since it launched the first successful Australian car in 1948, General Motors Holden's has stumbled.

Not only did the company lose its place as market leader to Ford for 1982, it chalked up its second operating loss in three years.

The company had an operating loss of $134.7 million in 1982, bringing total losses incurred during the past three years to nearly $260 million.

In contrast, Ford Australia is expected to announce a $100 million profit when its 1982 accounts are unveiled.

GMH has started a massive restructuring program which involves laying off some 1,400 employes.

It extended the voluntary layoff program until April 6. Only 1,000 persons had volunteered to step aside by the earlier deadline. Another 2,300 resigned under a similar program in 1982.

GMH said it also is reviewing its administrative and technical operations with an eye to streamlining. It would not comment on union reports that the aging Woodville plant in South Australia will close. It employs about 2,000 persons.

The 1982 loss was attributed to startup and interest costs involved with the new J-car, called the Camira, and of the new engine-making operation. The company said severance pay for the 2,300 who resigned, high inventories, price competition and a change to the 38-hour work week also contributed to the loss.

GMH has been trimming its workforce since 1974. The new program will leave the company with about 15,000 employes, compared with a 1974 level of 26,000. Even with the new low figure, GMH will employ approximately 2,500 more people than Ford, which builds slightly more vehicles.

In addition to manufacturing Holden Commodore and Camira cars, GMH assembles the Japanese-made Gemini. It also has a large plant manufacturing J-car engines and transmissions. The principal export markets are Britain, Europe and New Zealand.

GMH has suffered a considerable decline for a company which has held its place as market leader for more than 30 consecutive years.

In 1958, GMH held over half the total Australian new vehicle market, with Ford holding 14.3 percent and BMW/Leyland 12.6 percent. Ten years later, GMH's share had fallen to 34 percent, while Ford's had risen to 20 percent. Ford continued to attack, reaching a peak market share of 27.5 percent in 1973.

Both firms were victims of the Rising Sun, as Nissan, Toyota, Mitsubishi and Mazda made substantial inroads.

But while GMH dropped from 31 percent of the market in 1973 to under 22 percent last year, Ford went from strength to strength. For the first full year in history, Ford outsold GMH in 1982 and Falcon became Australia's largest selling car.

GMH has no quick answer to the problem.

The Camira (a local version of the J-car) has proved only moderately successful, despite winning a bundle of Car of the Year Awards.

Ford scored a huge success with its decision to assemble the Mazda 323, calling it the Laser. The Laser comfortably outsells GM's small car, the Isuzu-built Gemini.

Ford is now tooling up to assemble the Telstar, a local version of the front-drive Mazda 626, the most sophisticated small car to come to this market. Industry observers believe it will hurt Camira sales badly.

Having lost over $260 million in the past three years, GMH is likely to close some of its plants.

Chuck Chapman, GMH managing director, said that further rationalization and restructuring was inevitable and this would involve the international exchange of components.

Month's closer is best in 4 years

Car sales ease ahead of year ago

Continued from Page 7

1983, GM was up 2.21 percent, to 867,196 from 848,433. Ford slipped 0.32 percent, to 333,889 from 334,948. Chrysler's total of 186,287 was up 7.41 percent from 173,432. AMC was up 117.28 percent, to 47,045 from 21,652. VW-oA dropped 21.69 percent, to 17,405 from 22,225, and Honda added its 5,098 units to the total.

GM earned 59.52 percent of the first-quarter domestic market, down from 60.57 percent last year. Ford dipped to 22.92 percent from 23.91 percent. Chrysler edged to 12.79 percent from 12.38 percent. AMC had 3.23 percent, up from 1.55 percent. VWoA settled for 1.19 percent, down from 1.59 percent, and Honda claimed 0.35 percent of the 1983 total.

Ford N. America cost cuts top $2 billion, says Lutz

Continued from Page 2

ployе involvement was critical to making the Western industrialized democracies more competitive.

Employe involvement is the key to competing with any system in the world because it would achieve productivity gains, lower costs and higher quality, he said.

He said that the average employe wants to become more involved in company decision making because "the people on our assembly lines are probably better educated today than middle management was 20 years ago."

"The thing we can't forget is that people with little formal education often have a lot of intelligence," he said. "Worldwide communications systems, of course, are placing world perspective in front of people in a manner that simply did not exist 15 to 20 years ago.

"The average employe today has a very clear view of the way the world is moving. Intelligence isn't a question of position in the company, and many people have a substantial contribution to make.

"Ford U. S. has tapped into the huge brainpower of the payroll workforce — brainpower coupled with on-the-job experience," Lutz said. "We have found that employe involvement not only has helped productivity, it has also added quality."

Correction

In last week's story about the transfer of management responsibility for General Motors' Toledo automatic transmission plant from Chevrolet to the Hydra-matic Division, it was stated that new appointments were made at the Toledo plant. It should have read that the new appointments were made in the Hydra-matic Division. Those people will remain in the Ypsilanti (Mich.) headquarters of the division.

AIADA promotes Varley

WASHINGTON. — Kathleen Varley has been named vice president, public affairs, of the American International Automobile Dealers Assn. She formerly was director of public affairs.

Mild sales upturn puts domestic inventory at healthy level

New-car stocks dip to 55½ days

Continued from Page 1

down from 75 days, and a 60-day supply of compacts, down from 73½ days.

Intermediates were in 55-day supply, compared with 66 days a month earlier and standards were in a rather lean 46-day supply, down from 58 days. The industry had a 51-day supply of luxury cars, down from 65 days a month earlier.

The April 1 inventory was divided this way by market segment: Subcompact, 18.91 percent; compact, 22.81 percent; intermediate, 35.08 percent; standard, 16.17 percent, and luxury, 7.03 percent.

A month earlier, the inventory was divided as follows: Subcompact, 18.80 percent; compact, 22.95 percent; intermediate, 34.33 percent; standard, 16.84 percent, and luxury, 7.08 percent.

The April 1 days-supply figures by market class were:

Subcompact—Accord, 25; Alliance, 46; Escort, 53; Charger, 57; Turismo, 60; Lynx, 60; Horizon, 63; Eagle SX/4, 63; Omni, 67; Chevette, 77; LN7, 82; Pontiac 1000, 88; Rabbit, 98; EXP, 103, and Spirit, 144.

Compact — Zephyr, 35; Reliant, 45½; Fairmont, 47; Pontiac 2000, 52½; LeBaron, 58; Aries, 60; Firenza, 61; Firebird, 63; Camaro, 64; Dodge 400, 66; Cavalier, 67; Skyhawk, 67½; Mustang, 83; Cimarron, 83, and Capri, 95.

Intermediate — Cutlass four-door, 25; Cutlass coupe, 41; Cougar, 43; New Yorker E, 45; Cutlass Ciera, 46; Bonneville, 46; Pontiac 6000; 47½; Malibu, 48; Celebrity, 51; Century, 53; Regal four-door, 58; Monte Carlo, 60; Regal coupe, 61; Grand Prix, 62; Marquis, 64; LTD, 66; Thunderbird, 67; Chrysler E Class, 68; Dodge 600, 72; Omega, 80; Skylark, 82; Concord, 87; Eagle, 94; Citation, 108, and Phoenix, 121.

Standard—Olds 88, 29½; Olds 98, 40; Grand Marquis, 40; Gran Fury, 43; LeSabre, 46; Crown Victoria, 47; Diplomat, 54½; Electra, 55; Chevrolet, 59; New Yorker Fifth Avenue, 64; Cordoba, 66, and Mirada, 109.

Luxury — Lincoln, 40; Imperial, 41; Eldorado, 46; Cadillac, 48; Seville, 48; Continental, 56; Toronado, 57; Riviera, 60; Mark VI, 68, and Corvette, 80.

College recruits

Jerry Laine, president of the Chicagoland Chrysler-Plymouth Dealers Assn., greets the Chicago-area college students who represented Chrysler at the Chicago Auto Show. The dealer group trained students from Loyola, De Paul, Illinois-Chicago and Illinois Institute of Technology to work with salesmen in informing people about new Chrysler products.

Rodeo spurs truck-van sales for Dodge dealer

SPRINGFIELD, Ill. — During "The World's Toughest Rodeo" here, Harold Arbeitman, president, Springfield Dodge, sponsored a Dodge truck and van sale.

Arbeitman arranged for a country radio station to do a live show with rodeo participants from his Dodge showroom for four hours on a Saturday morning.

During the show, Arbeitman sold four Dodge trucks and one van. He said that more were sold later.

At the rodeo, two Dodge trucks were displayed in the ring for one hour before each show and during the intermissions. Arbeitman put up some of the prize money for the rodeo events.

According to Arbeitman, Chrysler Corp. wants to help sponsor the rodeo next year.

Truck experts expect upturn–but a small one

Continued from Page 1

in the economy, James T. Riley, former GMC Truck & Coach general sales manager, said medium and heavy trucks "may be ready to begin their long road back to recovery later this year."

Neil A. Springer, general manager, International Harvester Truck Group, thinks a rebound in big-truck deliveries could begin in June or July, and said "it could come earlier if the recovery in the economy is stronger than anticipated."

Mack's Curcio said North American factory sales of Class 8 heavy diesel trucks should rise from the 1982 level of about 81,000 units to 88,000 this year. Springer feels that retail Class 8 deliveries could hit 81,000 in Harvester's fiscal year, which ends Oct. 31.

GMC's Riley thinks that a strong fourth quarter could push calendar-year Class 8 retail sales to 85,000 units, and possibly 88,000, but he said these figures can be realized only with continued improvements in the general economy.

Makers show gains for March, first quarter

Auto output well ahead of '82 pace

By Patricia Hoffman
Staff Writer

Domestic auto production for the first three months of 1983 topped last year's total by 38.29 percent, and March output rose 19.30 percent from the comparable 1982 period.

Last month, the manufacturers assembled 574,535 cars, up from 481,578 built the same month last year. It was the most for any month since June of 1981, when the makers built 712,524.

Breakdown for March by company was: General Motors, 57.81 percent; Ford Motor, 22.89 percent; Chrysler Corp., 14.46 percent; American Motors, 2.74 percent; Volkswagen of America, 1.58 percent, and Honda, 0.52 percent.

First-quarter output totaled 1,503,172 cars, up from 1,087,000 built during the first three months last year, but down a bit from 1,565,531 in the opening three months of 1981. It was the highest quarter since the second quarter last year when the makers finished 1,547,259 units.

Last week, the makers scheduled 127,122 cars, a 25.68 percent gain from 101,145 built in the previous shortened holiday week. Output was also up 41.02 percent from last year's 90,147 units.

So far this year, there have been 1,634,385 automobiles assembled, a 33.51 percent gain from 1,224,141 built in the comparable 1982 period.

The GM Willow Run and Wilmington facilities were closed last week (April 4) for inventory control.

Ford's Kansas City plant remained idle last week due to conversions to the Topaz and Tempo models. Assembly of the Fairmont and Zephyr models ended at the point March 14. Production of the new models is scheduled to begin May 2.

Saturday overtime was scheduled last week at Ford's Chicago, Lorain and St. Louis facilities.

Chrysler's Belvidere, Jefferson and Newark plants each worked two daily nine-hour shifts last week. The company's St. Louis point operated one daily nine-hour shift.

All other car facilities returned to normal five-day operations last week following downtime the previous week due to the Good Friday holiday.

Canada's March output dips, but first quarter tops '1982

Canadian auto and truck production in March fell below last year's totals, but output for the first three months of 1983 was higher than in the first quarter of 1982.

Last month, the car manufacturers assembled 87,161 units, down 2.28 percent from 89,197 built during March of last year. Last month's was up from February's total of 77,863.

Car output for the first quarter totaled 238,369 units, a 16.20 percent gain over last year's 205,139. It was the most for that period since 294,832 units were completed in the first three months of 1979.

Truck production slipped to an eight-year low last month with output of 47,807 units, down 13.87 percent from last year's 55,505. It was the worst March since 1975 when 31,383 trucks were assembled.

During the first three months of 1983, the truck manufacturers produced 121,914 units, a slight gain from last year's 121,139. The total was far below the 182,729 built in the first quarter of 1981.

The auto makers scheduled 18,941 cars last week, a 15.21 percent gain from 16,441 built during the previous shortened holiday week. Output was also up 16.26 percent from 16,292 units produced in the comparable 1982 period.

Year-to-date, the car manufacturers have assembled 255,699 units, up 13.20 percent from last year's 225,876.

Last week's truck output was slated at 11,231 units, a 39.36 percent gain from 8,059 built during four days of assembly the previous week, and up 24.69 percent from last year's 9,007.

So far this year, the truck makers have finished 131,828 units, down 2.06 percent from 134,603 built in the comparable 1982 period.

Ford Motor's St. Thomas car point was idle last week (April 4) for inventory control.

Also at Ford, the Oakville car facility, idled Feb. 21, remained closed for changeover to the new Tempo and Topaz models. Full production is slated to resume there today (April 11). Oakville previously built the Crown Victoria.

Operations resumed last week at American Motors' Brampton facility. The plant was idled March 21 during which time assembly of Spirit was discontinued there. Concord production will be phased out this month, leaving the Eagle as the sole vehicle produced at Brampton.

All other car and truck facilities returned to normal five-day operations last week following the Easter holiday.

His 25th year

Raymond J. Leiferman, left, Leiferman Chevrolet Co., Bridgewater, S. D., receives a 25-year dealer plaque from Donald L. Smith, assistant manager for Chevrolet's Fargo zone.

Truck production best since '79 for March, quarter

Domestic truck production during March and the first quarter of 1983 reached the highest point for those periods in four years.

Last month, the makers assembled 210,744 trucks, a 7.42 percent gain from last year's 196,192. It was the most for March since 1979 when 358,126 trucks were assembled. It was the highest total for any month since 213,209 units were built in June of last year.

Output for the first three months totaled 511,402 units, a 13.29 percent gain from last year's 451,406. It was the highest first-quarter total since 1979 when 1,003,218 units were completed, and the most for any period since the second quarter last year when the makers finished 589,031.

The manufacturers estimated 42,006 units last week, up 15.93 percent from 36,234 built in the previous holiday week, and up 26.63 percent from last year's 33,173.

So far this year there have been 553,408 trucks assembled, a 10.31 percent gain over 501,696 built in the comparable 1982 period.

American Motors' Toledo (Jeep) facility remained closed last week (April 4) for inventory control. Operations there were halted March 28.

Saturday overtime was scheduled last week at General Motors' Pontiac (S-truck) line, Janesville and St. Louis points, plus Ford Motor's Lorain facility.

Chrysler Corp.'s Belvidere and Warren plants operated daily overtime for the third consecutive week last week. Belvidere operated two daily nine-hour shifts, while Warren worked one daily nine-hour shift. Both points have been on overtime schedules since March 21.

All other truck facilities returned to normal five-day operations last week following the Easter holiday.

Chrysler objections to GM-Toyota deal detailed at hearing

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Chrysler Corp. last week spelled out in detail its objections to the proposed joint venture in which General Motors and Toyota would build subcompact cars in an idle GM plant in California.

Chrysler has been opposed to the GM-Toyota plan ever since it was announced. Last week's detailed presentation was made by Chrysler Vice Chairman Gerald Greenwald before a House subcommittee holding hearings on proposed local-content legislation.

At the hearing, Chrysler also called for import quotas and an added tariff on Japanese-made autos.

Of the GM-Toyota agreement, Greenwald said: "The deal fails all the important tests of corporate responsibility and propriety and holds serious ramifications for the American auto industry and for the workers and taxpayers of this country."

The agreement violates Section 1 of the Sherman Act, Greenwald said, because, it is an "illegal price-fixing agreement."

He said the two companies operate in the same market as the proposed joint venture and will inevitably set the price of their products in relation to their agreed-upon price for the joint venture product.

The anticompetitive consequences of this "price fixing" will not be confined to the subcompact market, either, he said. Car makers must consider the price of cars in higher and lower segments of the market and, thus, Chrysler feels it is inevitable that the pricing of the new subcompact will have a "ripple effect" all the way up the line.

• Greenwald said the proposed agreement also violates Section 7 of the Clayton Act which bans agreements that increase con-

J-car by Isuzu

It's name is Aska

Isuzu, which is 34 percent owned by General Motors, has selected Aska as the name for its version of the J-car. The Aska, which is now on sale in Japan, is 175 inches long and has a wheelbase of 101 inches. The car has a wide range of engines, including one with a turbocharger. Story on Page 48.

NHTSA faked film showing axle defect in Malibu wagon

By Helen Kahn

WASHINGTON. — The film of a 1979 Chevrolet Malibu station wagon losing a rear wheel and dropping an axle, which was seen by millions of TV network news viewers on April 1, was rigged by a NHTSA engineer who removed the C-ring and adjusted rear braking before driving the car.

Eventually, the induced failure occurred, but it was a real live accident. It was meant to show what could occur if a part failed causing the axle shaft to work loose.

But NHTSA did not label this test a "simulation" and Richard Burdette, NHTSA's public affairs director, said he had no regrets because the films "accurately and fairly represent the various aspects of such separation and its consequences," and he plans no changes in procedure.

Although the texts of investigative reports are docketed and available to the public, TV reporters received the press release and the film with no explanation or disclaimer too late on April 1 to view the docket.

In any case, they might have missed the 18th page of fine print explaining that the failure had been deliberately created to show the "catastrophic" results.

Burdette explained that NHTSA does two kinds of tests — to find out what causes a failure and to find out the results of a failure.

General Motors and reporters want the government to be as scrupulous as the government expects business to be in label-

New-model parade slows down

Ford's big news for '84 is Mark VII

By Jim Plegue
Staff Writer

Ford Motor Co., which has rolled out a bonanza of new models in recent years, will have only one totally new car to unveil for the 1984 model year.

Instead, the company is making the most of its improvements under the hood — with new or improved engines — and inside existing passenger-car lines.

New for '84 will be Lincoln-Mercury's Mark VII, which the division says will debut Sept. 27. The five-passenger sport coupe will ride on a 108-inch wheelbase, six inches shorter than the current Mark VI. Overall length will be 203 inches.

There will be no four-door model, as there is with the current Mark VI line.

In keeping with Ford's new "aero" look, the Mark VII will have styling cues similar to the company's new Thunderbird. Only design concession to previous Marks will be a similar grille and hood ornament and the traditional — albeit softened — spare tire bump on the decklid.

Standard Mark VII powertrain will be Ford's 5.0-liter V-8 engine with electronic fuel injection mated to a four-speed automatic-overdrive transmission.

Later in the model year, Ford Motor will add an optional 2.4-liter, turbocharged six-cylinder diesel engine, purchased from BMW. That engine will also be coupled to the four-speed automatic gearbox.

Lincoln will offer the Mark VII in several of its "Designer Series" models but also plans a sport LSC version (presumably the LSC means Luxury Sport Coupe). LSC equipment includes handling suspension, blacked-out trim, special interior, fog lamps and wider tires on styled alloy wheels.

It would appear that Ford studied the popular European sedans in planning its Mark VII model. Mark VII's standard equipment will include rack-and-pinion steering, four-wheel-disk brakes, front and rear stabilizer bars and Mercedes-Benz-type folding outside mirrors.

Inside, the car will have such European type features as integrated rear-seat headrests and a resting pad for the driver's left foot.

The Mark VII will also have computer-controlled air suspension with an automatic leveling device.

Ford has been running dual

breaking news

Chevy to offer Celebrity 'Eurosport' model

DETROIT.—Chevrolet will introduce a Celebrity Eurosport two-door model, probably for the 1984 model year. Eurosport will be powered by a port-injected version of Chevy's 60-degree 2.8-liter high-output V-6 engine. Suspension modifications, blacked-out trim, alloy wheels on wide tires, body rub strip with red piping and red "Eurosport" badges will complete the package.

One-liter Subaru on the boards

TOKYO.—Fuji Heavy Industries reportedly is developing a one-liter Subaru, with engineering emphasis placed on fuel efficiency. The front-wheel-drive mini is expected on the market in Japan early in 1985.

BMW plans air-bag option in 1985

DETROIT.—BMW of North America will offer optional air bags in its 7 Series car in the U. S. in 1985, according to a company engineer.

Toyota has 12-day supply of cars

Import inventory falls to 35 days

By Richard A. Wright
Assistant Managing Editor

Shortages were the rule April 1 among imported-car dealers as they entered the month with an emaciated 35-day supply of new cars.

The inventory of new imported cars April 1 totaled 287,408, down from 316,745 a month earlier, which was a 41-day stockpile.

The inventory of new imported pickup trucks also declined during March to 92,727 April 1, a 61-day supply, compared with 93,593 a month earlier, an 83-day stock.

The combined imported car and truck inventory April 1 totaled 380,135, a 39-day supply, compared with 410,338 a month earlier, a 46-day stockpile.

Most of the stock slashing was done by the Japanese nameplates. Japanese lines were in only 30-day supply April 1, compared with 34 days a month earlier.

Toyota staged a sale during the month which sliced its already thin March 1 stock of 19 days to less than 12 days by April 1.

Japanese cars and their April 1 days-supply figures were: Toyota, 12; Isuzu, 22; Honda, 23½; Subaru, 30; Nissan, 37½; Mazda, 40, and Mitsubishi, 74. In addition, Chrysler Corp. had a 76-day supply of Mitsubishi-built cars April 1, including Dodge Colt, 62 days; Plymouth Colt, 73 days; Sapporo, 91 days, and Challenger, 104 days.

The high-line West German cars, Mercedes-Benz, Porsche and BMW, all continued to be in short supply and Volkswagen backed away at its stock of imported cars, bringing the West German stockpile down to a 51-day supply from 60 days a month earlier.

West German nameplates and their April 1 days-supply figures were: Mercedes-Benz, 25; Porsche, 31; BMW, 34; Volkswagen, 66, and Audi, 98. VW also had a 95-day supply of U.S.-built Rabbits.

Among other European marques, Jaguar was still very short and Volvo and Saab were running below their usual levels.

Days-supply figures of other European lines were: Jaguar, 19; Volvo, 36; Saab, 43; Alfa Romeo, 75; Peugeot, 100; Renault, 233, and Fiat/Lancia, 509.

Of the total new-car inventory, 196,091 were of Japanese origin and 47,809 were West German. The rest were other European.

Days-supply figures for imported pickup trucks April 1 included Toyota, 36; Mazda, 46; Nissan, 52; Chrysler Corp./Mitsubishi, 71; Mitsubishi, 110, and Isuzu, 149.

Relief system, Fremont are issues

Strike vote by UAW under way at GMAD

By Marjorie Sorge
Labor Editor

Angered by General Motors' trend to switch from tag relief to mass relief, UAW locals in the GM Assembly Division began voting yesterday (April 17) to decide whether to strike the company over that issue.

In another twist, some UAW locals emphasized that workers were also voting on whether to strike if GM did not give laid-off workers at the idle Fremont (Calif.) plant preferential hiring rights. That facility is scheduled to build the new car produced by the joint GM-Toyota venture.

But, according to a UAW spokesman, the issue of mass relief is paramount in the strike vote. In mass relief, the entire line is shut down twice a day for 23-minute breaks. Under tag relief, workers are periodically replaced by revolving workers for breaks. UAW officials estimate that the switch could cost 400 jobs at each facility affected.

According to a GM spokesman late last week, the company had not been officially notified of the strike vote and had no comment.

GM has instituted mass relief at five plants.

• Other issues prompting the strike vote are production standards, outsourcing and subcontracting.

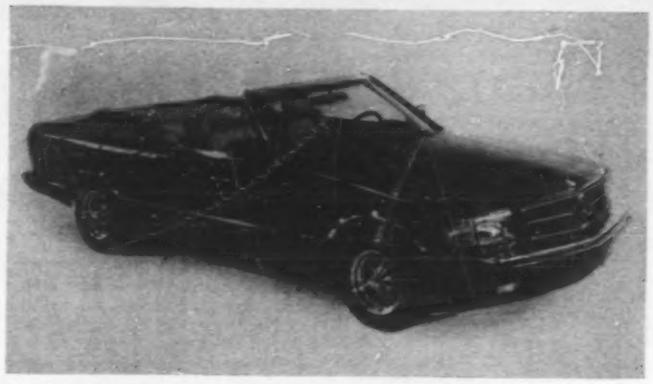
The strike vote issue came to a head 10 days ago at a UAW-GM subcouncil meeting in New Orleans. The two major issues discussed at the meeting were mass relief and the hiring situation at Fremont.

William Colbath, of the union's GM department, told the representatives to go ahead and poll the membership but to hold the vote before the UAW's Constitutional Convention which begins in Dallas on May 15.

Each local taking the vote decides what issues should be on the ballot. While the international union expects mass relief to be the major issue, a UAW spokesman said it is more than possible that most unions will put the Fremont issue on the ballot. Even if a strike is approved it would not necessarily begin immediately but would be held in limbo until a local wanted to invoke it.

UAW President Douglas A. Fraser has said he believes the hiring situation at Fremont can be resolved through peaceful collective bargaining, but he has emphasized that the union will declare war if UAW workers laid off from the plant are not rehired.

There are about 5,100 hourly workers laid off at Fremont.



Coffman Coachwork conversion

Coffman Coachworks, of Clearwater, Fla., offers the Mercedes-Benz 380-SEC convertible for $89,000. The car is equipped with a hydraulically assisted electric convertible top, steel-reinforced chassis and windshield post, custom-made headliner which covers the inside of the top and mahogany wood or leather which covers exposed metal in the interior. The standard conversion, which costs $32,000, includes chrome or wire wheels and European headlights. Coffman also repaints the car. The company expects to produce four 380-SEC convertibles per month.

GM to recall 861,000 cars for emissions

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — A problem that has haunted the emission-control systems on a good many domestic cars of the mid-to-late 1970s surfaced again last week as General Motors was forced to recall about 861,000 of its 1978 and 1979 models for failure to meet oxides of nitrogen tailpipe emission standards.

The problem lies in the exhaust gas recirculation (EGR) system of the cars which, as the name implies, sends inert exhaust gas back into the cylinder to cool the combustion process to keep oxides of nitrogen from forming.

GM's problem in the present instance, and as others have also experienced, is clogging of the EGR valve which is keeping sufficient amounts of EGR from reaching the cylinder, resulting in excess oxides of nitrogen emissions.

According to the EPA, the problem shows up in six-cylinder 1978 and 1979 models with 3.3-liter engines and in 1979 models with 3.8-liter V-6 engines. Models equipped with the 3.3-liter engine are the Chevrolet Malibu, Monte Carlo and El Camino and the GMC Caballero.

Models equipped with the 3.8-liter engine include the Buick LeSabre, Skylark, Skyhawk, Century and Regal; Pontiac Catalina, Firebird, Phoenix, Sunbird, LeMans, Grand Am and Grand Prix; Oldsmobile Delta 88, Omega, Starfire and Cutlass; Chevrolet Monte Carlo, and turbocharged Buicks such as the Regal, Century, LeSabre and Riviera.

• GM has 45 days in which to come up with a plan to fix the cars but, according to sources, it has already determined that a "remote transducer" for the EGR system will correct the problem.

GM says, however, that it will not apply the fix to any car that is six years old or older and/or has more than 60,000 miles on the odometer. GM argues that the Clean Air Act requires car makers to certify that their vehicles will meet emission standards only for the first five years or 50,000 miles of their life.

GM and the EPA have previously tangled on this issue and are currently awaiting a decision from the U. S. Court of Appeals for the District of Columbia that would settle the matter. The EPA maintains manufacturers are liable for emissions compliance for the life of the car, be it 30,000, 60,000, or 100,000 miles.

Last month, the EPA ordered GM to recall 527,000 other 1978 models for similar failure to meet oxides of nitrogen standards and here, too, the EGR system was implicated.

Since 1977, EPA has conducted or influenced 19 recalls of cars failing to meet the oxides of nitrogen standards because of faulty EGR systems. More than 5.3 million vehicles have been involved in these recalls.

Pending the D.C. court's decision, owners of affected vehicles with fewer than 60,000 miles on the odometer will be asked to bring their cars in for a free repair.

AMC and GM account for the increases

Early-month sales top last year's

By Mary Beth Mayer
Staff Writer

Domestic new-car sales in early April handily surpassed the year-ago level and the forecast calls for more of the same as key economic indicators continue to be positive.

It was the second consecutive period of improved sales and the 14th in the last 17 periods.

April 1-10 sales numbered 158,675, up 18.9 percent from 133,402 a year earlier. They were down 40.1 percent from 264,963 recorded in the final period in March. There were eight selling days April 1-10, yielding a daily selling rate of 19,834, up 33.81 percent from the average of 14,822 from nine selling days a year ago.

American Motors and General Motors enjoyed substantial sales increases, while the competition suffered sales losses of 62 percent to 4.8 percent. AMC reported an estimated sales figure of 5,250 for the period, up 176 percent from 1,900 in 1982. Renault Alliance sales made up 3,500 of this total. GM was up 37.9 percent, to 104,978 from 76,093.

Chrysler Corp. reported sales of 19,845, down 4.8 percent from 20,852 a year earlier. Ford Motor Co. sales fell 16.4 percent to 26,913 from 32,214. Volkswagen of America reported sales of 889 new Rabbits, down 62 percent from 2,343. Sales of U. S.-built Honda Accords were estimated at 800.

GM sales accounted for 66.16 percent of the market, up from 57.04 last year. Ford earned 16.96 percent, down from 24.15 percent. Chrysler cornered 12.51 percent, down from 15.63 percent. AMC had 3.31 percent, up from 1.42 percent. VWoA dropped to .56 percent from 1.76 percent and Honda claimed the remaining .50 percent of the 1983 market, with no showing a year ago.

Oldsmobile not only reported a 76-percent sales increase for the period, it erased a seven-year-old record with the sale of 30,377 units in the first 10 days of April. The division's previous record for this period, 28,026 cars, was established in 1976.

Oldsmobile's total was greater than any other U. S. make, including Chevrolet which finished with 29,413.

In addition to Oldsmobile, Chevrolet and Buick, U. S. makes reporting sales increases for the period were: Chrysler, up 34.2 percent; Lincoln, up 7.5 percent; Cadillac, up 43.3 percent, and Pontiac, up 0.2 percent.

GM engine case moves one step nearer solution

By Roger Rowand
Engineering Editor

CHICAGO. — The six-year-old General Motors engine switch, or Chevymobile case, which Federal Judge Frank J. McGarr said threatened to become perpetual, took still another step toward a close last week.

Judge McGarr gave tentative approval of a settlement giving a maximum of $400 to each of about 12,500 customers who bought 1977-model Oldsmobiles with Chevrolet-built 350-cubic-inch V-8 engines before April 10, 1977.

Most of the owners of other cars in the class action suit here already either have accepted a GM customer satisfaction offer of an extended warranty and $200 in cash or had their litigation settled by jury action in June, 1981.

April 10 is the date by which the court believed the public had been made aware of the engine interchange situation.

About 72,000 owners who bought cars after April 10 were ruled against by the jury. That left about 68,000 in the case. Of those, about 50,000 accepted the GM $200 and warranty offer. Of the 18,000 remaining, some 5,500 were dismissed for a variety of reasons. The remaining 12,500 are affected by the most recent ruling.

Judge McGarr is expected to issue a final ruling July 27.

A smaller class action suit continues in Ohio and several individual lawsuits are pending.

De Tomaso loses $7 million in '82

RED BANK, N. J. — De Tomaso Industries, Inc., reported a 1982 loss of $7,293,056, or $3.54 per share, on sales of $159,085,416.

In 1981, the company lost $9,668,056, $4.70 per share, on sales of $132,950,694.

Alejandro De Tomaso, company president, attributed 1982's performance to lower unit sales and gross margins on minicars, offset in part by increased unit sales of the Maserati Biturbo and by sales of older minicar models.

Syracuse buyer thaw

The warm welcome residents gave the Spectacular Spring Auto Sale in the Penn Can Mall indicates a definite upswing in the local Syracuse economy, according to Eric Burke, of AME, the sale's promoter. Fourteen participating dealers held a first-ever mall sale there.

'Old Grandpa' still going strong

Rufus Alexander, Bethpage, Tenn., has named this 1941 White "Old Grandpa" because it is his fleet's elder statesman. Repowered with a 1943 Cummins HB-600, it was the oldest White entry in the longest-running Cummins engine contest. It hauls tobacco from trading floors to tobacco companies.

truck industry news

Strong showing by non-captive imports sets pace

3-month sales rise slightly

In spite of small declines in two of the three months, first-quarter retail sales of new trucks of all types in the U. S. were up slightly over a year ago.

Franchised dealers and factory outlets retailed 666,291 vehicles in the January-March period, according to preliminary reports, a gain of 678 units over the 665,613 sold in the like period of last year.

Table on Page 32.

The three-month total, however, would have been lower than the 1982 first quarter if the non-captive imported compact pickup trucks had not had a strong upturn in the first three months.

Sales of the non-captives — Toyota, Datsun, Mazda, Isuzu and Mitsubishi — totaled 35,931 units in the January-March period, up 24.6 percent from the year-earlier 68,938.

Deliveries by domestic retailers, including the captive imports, were off 2.3 percent during the quarter, from 596,675 units in 1982 to 580,360.

March sales were down only about 100 units from the same month a year ago, but again, it was a strong month for the non-captive imports that put the March total ahead of the 1982 count.

This year 278,845 new trucks were retailed in March, compared with 279,738 units in 1982. Sales of the non-captive imports, however, were up 22.7 percent, from 30,858 last year to 37,850.

In February, sales were down 7 percent from the previous year and it was the first monthly drop on a year-to-year basis since last August.

The compact-truck market continues strong, and in the first quarter it accounted for 33.7 percent of total industry sales.

Through March, 224,682 small pickups and sports/utility vehicles were sold, an increase of 20.8 percent over the year-earlier 185,941.

Three-month sales of the domestic compacts totaled 124,815 units, an increase of 47.7 percent over last year's 84,515. The imported compacts were down 1.5 percent during the quarter, from 101,426 units last year to 99,867.

The plunge in deliveries of

How Cummins placed diesels in vehicles

COLUMBUS, Ind. — When Cummins Engine Co. was founded in 1919, the "oil engine" was suitable only for stationary power. It supplied power for machines which could be hooked onto the engine, for the oil engine was far too big to be installed in any equipment.

Few people imagined it would ever be used to move a vehicle of any kind.

Today, diesels are powering trucks, buses, boats, earthmovers, trains and supplying the emergency power for hospitals and computer operations.

Clessie L. Cummins saw, in this power, a source of reliable power needing only certain refinements.

Cummins, a chauffeur for W. G. Irwin, Columbus (Ind.) banker and businessman, soon converted most of the Irwin factory garage into a small machine shop where he "tinkered" with the oil engine.

He ultimately persuaded Irwin to provide financial backing and Cummins Engine Co. was incorporated.

Only 19 6-HP farm-type engines were sold the first year, manufactured in an old cereal mill in Columbus. Then, in 1920, Sears, Roebuck & Co. contracted for 4,500 1½ and 3-HP engines.

By the mid-'20s, Cummins introduced a successful marine engine. These engines found their way into motor launches, pleasure craft, luxury yachts, generator sets, drills, power shovels and air compressors because of their economy and dependability.

The general public was unaware of the possibilities of the diesel engine, so in the following few years Clessie Cummins

10-year coverage

Budd unveils warranty on wheels

DETROIT.—Budd Co. has announced what it believes to be an industry first—a 10-year warranty for the Ledge-Weld steel-disk truck wheel.

"With our modern manufacturing techniques and sophisticated quality control procedures, escalating the company's traditional five-year warranty to 10 years was the next step for us," said James D. Glaspie, director of sales and engineering for Budd's Wheel and Brake Division.

"Budd has 60 years of experience in wheel-making and has produced more than four million Ledge-Weld wheels, making us the disk-wheel leader," continued Glaspie. "The market told us what it wanted, and we have responded."

The 10-year warranty also applies to new Budd Bevel-Weld steel-disk truck wheels as well as tube and tubeless demountable rims.

Unlike other warranties of which the company is aware, Glaspie said, Budd's is transferable from the original purchaser user to subsequent users and is not based on pro-rated use.

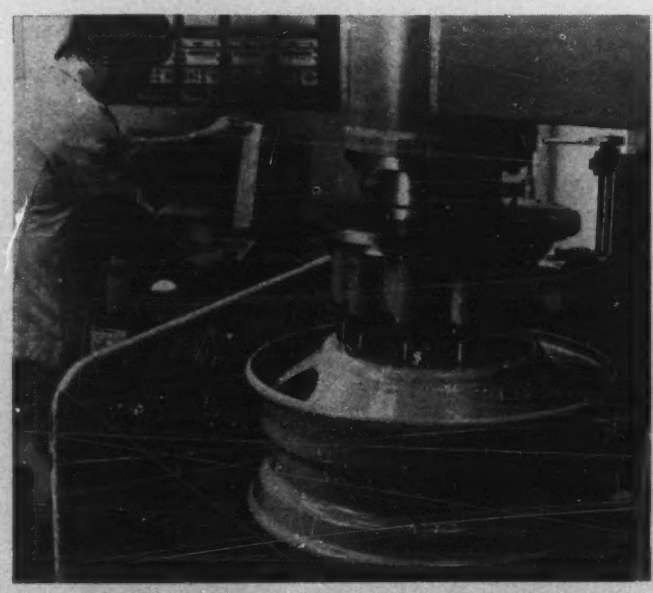
The new warranty, which replaces the current five-year warranty. Budd introduced to the industry, is effective for wheels and rims manufactured after April 1.

Budd guarantees these wheels and rims to be free from defects in workmanship and material for 10 years from date of manufacture, which is stamped on the product, Glaspie said.

"Any of these wheels or rims found defective by Budd inspection within the warranty period will be replaced without charge f.o.b. factory," he added.

Wheels and rims covered by the new warranty must be used at all times in accordance with

Continued on Page 24, Col. 5



Making sure wheels run true

To make sure its truck wheels run true, Budd Wheel & Brake Division adheres to runout tolerances far stricter than industry standards, a spokesman said. Here a computer measures and records radial and lateral runout on a moving Budd Ledge-Weld truck wheel.

McKee and Brodie get high GM Truck posts

PONTIAC.—Two top-level appointments in the manufacturing and sales operations of the General Motors worldwide Truck & Bus Group have been announced by Donald J. Atwood, GM vice president and group executive.

Robert L. McKee has been named general manager of the Truck & Bus Manufacturing Division, and Duncan A. Brodie is the new truck-sales general director at the GMC Truck & Coach Operation.

McKee, who had been general manufacturing manager of the Chevrolet Division since 1976, succeeds Robert W. Truxell. Truxell left GM last month to become vice president of General Dynamics' Land System Division, which builds tanks for the U. S. Army.

Brodie, director of the GM Service Section since 1979, replaces James T. Riley. Riley has been placed on special assignment to Atwood.

McKee, 58, joined Chevrolet in 1953 as a safety engineer at the division's Bay City (Mich.) plant and has served in a variety of engineering, manufacturing and product reliability positions.

• Brodie, 48, has been with GM since 1959, starting as a junior engineer at GM of Canada, Ltd., in Oshawa, Ont. He held a number of sales and service positions in his native Canada prior to moving to the GM Service Section in Detroit.

Riley, 55, was named general sales manager of the former GMC Truck & Coach Division in 1980. The division was consoli-

Smith appointed HD sales chief at Ford Truck

DEARBORN. — Kenneth F. Smith has been appointed heavy-truck sales and marketing manager of Ford Truck Operations, succeeding the late Alan R. Krueger.

K. F. Smith

Smith had been director of marketing strategy for Ford North American Automotive Operations since 1981. He previously served for two years as vice president for export operations of Ford of Europe, Inc.

He joined Ford Motor Co. in 1957 and, after serving in management positions with Autolite-Ford Parts Division and the Ford Engine and Foundry Division, was named heavy-truck operations manager at Ford Division in 1973.

In 1976 he went to Ford Australia as truck-operations manager and the next year was named president - director of Ford Japan. He chaired the Toyo Kogyo Study Group which recommended Ford's acquisition of a 25 percent equity in the Japanese auto maker.

Speaking of Automotive Advertising...

by Terry Sweeney

The 1982 advertising totals are in.
For the important category of Commercial Trucks and Vehicles, it certainly comes as no surprise to me that Business Week ranked #1 in advertising pages among all magazines.

As a matter of fact, I can't remember the last year that we did not rank #1.

There are some pretty good reasons to support our dominant position in this marketplace. For openers, we know from our own recent research studies that nearly 60 percent of the companies we reach own or lease trucks.

And we also know that about half of our subscribers plan to replace their current vehicles within the next two or three years.

Additional research shows that Business Week subscribers play a vital role in the purchasing or leasing decision of a new commercial truck or vehicle. So it's no wonder Business Week did as well as it did, again, carrying more advertising in this category than Fortune, Forbes, and Nation's Business *combined.* Seems we really do get our advertisers to the top, and they've responded to our audience reach by putting us up there too.

Let me tell you more.
Give me a call.

Coot climbs, crawls, clambers

Coot, Inc., Round Rock, Tex., is marketing a four-wheel-drive off-road utility vehicle called the Coot. It has an 18-HP Tecumseh engine and twin articulating hulls which the company said propel it over virtually any terrain or obstacle. The Coot has a top speed of about 30 MPH on flat ground and can carry up to 1,000 pounds. Base price is $5,995.

32.09 pct. of January market

Import registrations capture record share

By Jenny L. King
Staff Writer

January registrations of new imported cars exploded to a record chunk of the total U. S. market plus a healthy increase in the number registered compared with the same month a year ago.

Import registrations for January, 1983, totaled 191,038, up 20.23 percent from 158,894 in 1982. This year's sum accounted for a record 32.09 percent of the market (there were 595,294 new registrations in January), up from 31.21 percent in 1982 (509,189 was the year-ago grand total).

Toyota, Nissan and Honda remained first, second and third among the imports, but Honda discovered that staying at about last year's total cost it 3.66 percentage points in the import market as its competitors increased their numbers.

Toyota was up just 0.02 percentage points as its registrations jumped to 43,084 from 35,793. Nissan climbed to 37,996 from 29,306, and gained 1.45 percentage points.

Mazda bumped Volkswagen from fourth place, Subaru maintained a foothold in fifth, and VW dropped to sixth. Renault Alliance snapped up seventh place, Volvo stayed in eighth, Mercedes-Benz dropped from seventh into ninth place and BMW rounded out the top 10. Audi slipped from ninth in 1982 to "others" this year.

The top 10 imports accounted for 89.15 percent of all import registrations, down from 90.11 percent in January, 1982.

For the month, Japanese imports were down to 74.47 percent from 77.29 percent of the market last year. German-built cars climbed to 10.70 percent from 10.63 percent. A new category, United States, which includes the U. S.-built Renault Alliance and Volkswagen Rabbit, was third largest, contributing 8.41 percent of all imports. The category was set up by R. L. Polk & Co., which tabulates import registrations.

Registrations by country of origin in January, 1983 vs. 1982, were:

	Jan., 1983	Jan., 1982
Japan	142,272	122,818
West Germany	20,438	16,893
United States	16,059	8,300
Sweden	7,750	5,908
France	2,952	3,117
England	1,045	571
Italy	467	895
Ireland	55	392

Registrations of imported trucks in January totaled 37,224, up 14.70 percent from 32,452 in 1982. Truck totals for the first month of 1983 compared with the preceding year were:

	Jan., 1983	Jan., 1982
Toyota	11,774	9,681
Nissan	10,112	7,612
Ford Courier	4,202	3,651
Mazda	3,775	.....
Dodge Ram 50	.....	2,816
Others	7,361	8,692
TOTAL	37,224	32,452

Strong showing by non-captive imports sets pace

3-month truck sales rise slightly

Continued from Page 20

the captive imports hurt total sales heavily. Only 13,936 captives were sold in the first three months, down 57.1 percent from last year's 32,488.

Ford outsold Chevrolet by almost 10,000 units in March to regain sales leadership.

• During the month, Ford dealers retailed 91,844 new trucks, up 12 percent over last year's 81,993. The first-quarter total climbed to 213,547, a gain of 11.3 percent over the year-ago 191,839.

Chevrolet deliveries, on the other hand, dropped 16.8 percent during the month to 82,602 units, compared with 99,322 in March, 1982. The three-month count was 209,968, a decline of 10.8 percent from last year's 235,508.

Dodge and Plymouth dealers sold 27,552 light trucks during the month, up 12.9 percent over the year-earlier 24,409. Through March, however, the total was down 10.2 percent from last year, 59,259 units versus 65,963.

Sales of GMC new trucks were off for both March and the first quarter. Dealers sold 25,224 units during the month, down 9.5 percent from last year's 27,880. The three-month count was off 5 percent, from 61,859 in 1982 to 58,742.

American Motors reported that Jeep dealers sold 5,851 of the four-wheel-drive vehicles in March, a gain of 13.3 percent from last year's 5,163. Through March, the total was 15,546, up 8.5 percent from the year-earlier 14,323.

Volkswagen dealers sold only 500 compact pickups during the month, down 68.7 percent from last year's 1,599. The three-month count of 1,577 units was 60.8 percent lower than the year-ago 4,020. Production of these vehicles has been discontinued.

• In March, Toyota dealers retailed 15,019 small trucks, an increase of 4.8 percent over last year's 14,331. Through March, they had sold 34,595 units, up 4.1 percent over the previous year's 33,239.

March sales of Datsun compacts totaled 11,563 units, a gain of 1 percent over the year-earlier 11,452. The three-month count was 16.5 percent higher than a year ago—27,543 versus 23,652.

Mazda deliveries more than doubled in March and the first quarter. Dealers retailed 8,417 compacts during the month, up 133.7 percent from last year's 3,602. Through March, the total of 16,913 units was 104.5 percent higher than the 8,271 sold in the like period in 1982.

Isuzu dealers retailed 2,094 small vehicles during the month, an increase of 42.2 percent over the year-ago 1,473. The three-month total climbed to 4,916 units, an increase of 30.2 percent over last year's 3,776.

Mitsubishi dealers sold 757 compacts during the month, bringing the January-March total to 1,964 units. These trucks were introduced in the U. S. market last fall.

Dodge dealership opens

BELMONT, Mass. — Peter Fuller Dodge, headed by Peter D. Fuller Jr., has opened here. Since 1980, Fuller had been vice president of an Oldsmobile dealership founded by his father in 1931.

GM Truck picks McKee, Brodie

Continued from Page 20

dated as part of the GM Truck & Bus Group in 1982.

Riley has been associated with the truck business for most of his career in the motor-vehicle industry. He joined GM as Kansas City truck manager for Chevrolet in 1957.

He was Chevrolet truck sales manager before being named general sales manager of GM's former Frigidaire Division in 1977, and was worldwide truck-marketing director for the GM marketing staff prior to moving to GMC.

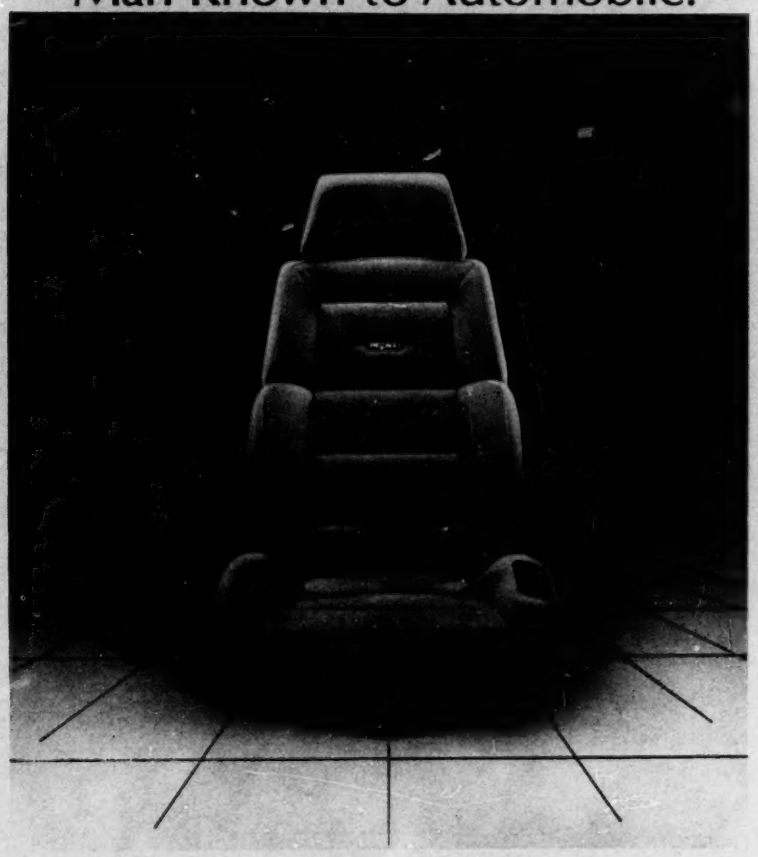
Recaro® Builds Seats to Fit Every Man Known to Automobile.



Whether you're building world cars or world beaters, now your vehicle can have seats from the world leader—Keiper Recaro Inc.

The automotive world has long recognized the virtues of Recaro seats. Orthopedically correct, they are the standard by which all transportation seats are judged.

Keiper Recaro now offers the expertise which built such seats to the American automotive industry. Adding to our national headquarters in nearby Battle Creek, Michigan we've established full production facilities in Ligonier, Indiana. With full manufacturing, design and development capabilities locally placed, we're ready to supply every automobile with a perfect seating application.

Call on us and interface your ideas with our seating expertise. We'll give you the exact seating solution you require. Because Recaro builds seats to fit every man known to automobile.

New tire device allows driver to see low pressure

NASHVILLE. — Schrader Automotive Group, Scoville, Inc., has introduced a device which allows drivers to see whether their car's tire pressure is too low merely by walking around the car.

Called the Red Alert Low Tire Pressure Indicator, the unit performs all the functions of a conventional tire valve, but when pressure drops below a predetermined level, a red pin snaps up and is visible inside a clear plastic cap.

"This is the first basic change in automotive tire pressure control since the tire valve was invented in 1896," said Kevin Nameth, the company's general manager. "There is no valve core; the sealing mechanism is located inside the rim, not at the end of the valve stem."

Standard tire servicing equipment is used for inflating, deflating and gauging, he said.

The Red Alert device has only four moving parts. A seal and cap assembly keeps out dirt and moisture and three standard lengths cover all rim configurations, and are applicable to light trucks and other vehicles.

Gartin to follow Thomas as Manheim controller

LANCASTER, Pa. — Robert E. Gartin has been selected to succeed James C. Thomas as vice president and controller of Manheim Auctions, which operates 13 wholesale automobile auctions in 10 states.

Gartin will take over his new duties when Thomas' resignation becomes effective with this summer's move of the auction headquarters from here to Atlanta.

25 years for Prolo

SANTA CRUZ, Calif. — Stanley Prolo, of Prolo Chevrolet Co here, has observed his 25th anniversary as a dealer.

L-M dealership opens

Hollywood Lincoln-Mercury, Hollywood, Calif., opened for business with John and Michael Sullivan, right, heading the operation. Extending congratulations is R. R. Davis, left, Lincoln-Mercury assistant district sales manager. Also joining in the occasion are L. A. Zakin, second left, Lincoln-Mercury zone manager, and Victor Roy, dealership sales manager.

This rust protection system protects cars and car dealers.

It's called Quaker State Metal-Gard. You can't offer better protection for cars or your good name.

	Quaker State Metal-Gard	Your Current Program
1. Is warranty issued and backed by a brand name company with strong consumer recognition and acceptance?	YES	
2. Is it a Fortune 500 Company that has product lines for dealer purchase besides rust protection products to assure continuance in the market place?	YES	
3. Is dealer protected in event of claims for misapplication of product (except outright fraud)?	YES	
4. Does dealer program have registration fees?	YES	
5. Are they refundable?	YES	
6. Do they pay interest?	YES	
7. Are dealers' registration fees kept separate to protect them from other dealer accounts?	YES	
8. Does dealer receive verification of monies mailed in to make sure they were received?	YES	
9. Does dealer receive an annual statement of his fund status and claim activity?	YES	
10. Is dealer serviced by a local distributor?	YES	

Now that you've made the comparison, take the next step. Mail this coupon. Or call 814-676-7989 or 7814.

14 plants work extra hours

Overtime boosts auto production

By Patricia Hoffman
Staff Writer

Overtime schedules at 14 assembly points, plus the return of two General Motors' facilities, upped last week's domestic car production 9.42 percent from the previous week's total.

The car makers targeted 137,541 units last week, up from 125,702 built the previous week and up 19.95 percent from 114,664 assembled in the comparable 1982 period.

Breakdown for the week by company was: General Motors, 58.31 percent; Ford Motor, 23.46 percent; Chrysler Corp., 13.67 percent; American Motors, 2.42 percent; Volkswagen of America, 1.54 percent, and Honda, 0.60 percent.

Year-to-date the manufacturers have finished 1,770,506 units, a 32.79 percent gain from last year's 1,333,326.

GM's Tarrytown facility was closed last week (April 11) for inventory control. Back last week at GM were the Willow Run and Wilmington plants, which also had been down for inventory adjustment.

Ford's Kansas City plant remains idle for changeover to the new Tempo and Topaz models. Job One of the new cars is scheduled for May 2.

AMC's Kenosha point returned to normal five-day operations last week following an extra day of downtime for Easter vacation. The plant was idle Monday, April 4.

Ford's Atlanta, Chicago, Lorain, Wixom and St. Louis plants operated daily overtime last week, with St. Louis working two eight-hour shifts on Saturday.

Also working six days last week were GM's Baltimore, Flint, Janesville, Lansing and Leeds plants, plus Chrysler Corp.'s Newark and St. Louis facilities. Newark, St. Louis and Chrysler's Belvidere and Jefferson plants continued to work daily overtime last week.

The GM Oklahoma City point, source of Chevrolet Citation and Celebrity, and Buick Century models, will be idle one week starting today (April 18) for plant rearrangement. The plant will phase out assembly of the Citation, while production of the Celebrity and Century models continue there. About 2,600 workers will be affected.

Starting May 2, output of the AMC/Renault Alliance will be upped from the current rate of 664 units a day, to 860 units a day at the company's Kenosha plant. About 800 hourly employes will be recalled as a result.

Six U. C. dealers pay fines for odometer rollback

PHILADELPHIA.—Six used-car dealers, accused by Pennsylvania officials of rolling back odometers on used cars they sold, have agreed not to tamper with odometers in the future and will pay some $54,000 in civil penalties.

Dealers involved are: Gordon A. Whitehill, Cornwell Heights and northeast Philadelphia; David Lawrence Newsome, Norristown; John R. Rodgers Jr., Malvern and Philadelphia; Dennis G. Harding, Newtown Square and Philadelphia; John R. Koch and Virginia R. Koch, his mother, Summit Station, and James R. Haslam, Orwigsburg.

The Kochs have agreed to pay a $25,000 civil penalty.

The charges were brought by the state's attorney general.

Ford to expand St. Thomas plant to build big cars

DEARBORN. — Ford Motor Co. will build the Ford Crown Victoria and Mercury Grand Marquis at its plant in St. Thomas, Ont., the company confirmed last week.

That plant will also continue to build the Ford Escort and EXP and Mercury Lynx and LN7. The big cars are currently built at St. Louis, which has been operating at maximum overtime to keep up with market demand, Ford said.

A $62 million, 200,000-square-foot expansion is planned at St. Thomas, which will begin producing the standard-size vehicles for the 1984 model year.

According to Harold A. Poling, executive vice president, Ford North American Automotive Operations, St. Thomas' 3,000 workers will build more than 900 Escort, Lynx, EXP and LN7 models a day on two shifts. Output of the Crown Victoria and Grand Marquis will begin in December and will hit 50 an hour on two shifts at full production.

Workers at the St. Thomas plant recently approved changes in overtime scheduling in order to vie for the big-car production.

According to a Ford spokesman, St. Thomas will be involved in both production and construction simultaneously. It will continue to build the Escort, Lynx, EXP and LN7 while the expansion takes place.

Wage hike averts Ford Mexico strike

MEXICO CITY. — Ford of Mexico has averted a strike by granting its 5,000 employes a 27 percent increase in wages and benefits.

The plant was closed for three weeks because of excessive inventory. A similar measure will be taken in August, according to the union representing the workers.

Canadian output steady with 19,519 cars for week

Canadian car and truck output last week was about the same as in the previous week.

Last week, the auto makers scheduled 19,519 units, compared with the previous week's 19,739, but down 6.37 percent from last year's 20,848.

So far this year, the manufacturers have assembled 276,016 cars, a 10.42 percent gain from last year's 249,958.

Truck output last week was scheduled at 11,854, almost unchanged from 11,893 the previous week, and down 9.29 percent from last year's 13,068.

Year-to-date, the truck makers have finished 144,344 units, down 1.98 percent from 147,261 built in the comparable 1982 period.

Ford Motor Co. has announced plans to expand its St. Thomas car plant and add Crown Victoria and Grand Marquis later this year.

St. Thomas will continue to build Escort, Lynx, EXP and LN7. The plant remained closed last week for inventory control. Operations are slated to resume today (April 18),

Also at Ford, the Oakville car plant, originally scheduled to return last week with production of the new Tempo and Topaz models, will return today. Oakville, which previously assembled Crown Victoria, has been idle since Feb. 21.

All other car and truck plants were operating last week.

Truck production climbs to 51,145, best since June

Overtime at five assembly plants, and the return of the American Motors Toledo (Jeep) facility helped boost last week's domestic truck output to its highest point since June of last year.

Last week, the truck makers scheduled 51,145 units, up 21.38 percent from the previous week's 42,135 and up 26.71 percent from 40,364 built in the comparable 1982 period.

Year-to-date, there have been 604,682 trucks assembled, an 11.65 percent gain from last year's 541,579.

AMC's Toledo plant returned last week (April 11) following a week of downtime to control overstocked inventory.

Daily overtime was scheduled last week at Ford Motor's Michigan and Lorain facilities. The Lorain point also worked an eight-hour shift on Saturday.

General Motors' Detroit, Janesville and St. Louis facilities also worked six days last week.

Capacious Caprice

American Pullman stretches a Chevy

American Pullman Coachbuilders, Inc., Brooklyn, N. Y., adds 36 inches to the length of Chevrolet's popular full-size car to create its Caprice Corporate Executive Limousine. At a cost of $27,500 to the dealer (including car), the stretched Caprice features rear air-conditioning and heating, rear facing seats, console and power-operated glass divider. As many as 100 will be built this year, the company said.

Peck quits as NHTSA chief

WASHINGTON. — Raymond Peck, the sometimes controversial head of NHTSA, has resigned his post effective May 21.

Peck gave no reason for his leaving office with still more than a year and a half to go on his term. Speculation within the auto community, however, was that he was forced out.

In any case, there was "jubilation in the NHTSA hallways," several agency staffers said.

Clarence Ditlow, director of the Center for Auto Safety, a group that has had frequent run-ins with Peck, said he would not be sorry to see him leave.

"Peck never fulfilled his Congressional mandate and it's time we got someone in there who will enforce the law," Ditlow said. "We call on Transportation Secretary (Elizabeth) Dole to appoint such a person."

A replacement for Peck, even on an interim basis, had not been announced at press time, but speculation is that it will be Diane Steed, the current Deputy Administrator.

Auto industry officials were puzzled by Peck's announced departure and disappointed. "He's the only friend we've had there in a long time," one said, referring to Peck's actions on air bags and bumpers.

Peck leaves behind a legacy of having done, nearly to the letter, what the Reagan Administration said it would do in the auto safety areas. He rescinded the controversial Standard 208, the passive restraint requirement, and rolled back the 5-MPH bumper standard to 2.5 MPH.

Wide-ranging safety bill calls for air bags in '86

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A many-splendored potpourri of a bill packed with a wide range of auto safety ideas, both new and rehashed, has been introduced by Senator John Danforth, Missouri Republican.

Among other things, the bill mandates air bags for '86 models and anti-lacerative windshields, high-mounted rear stoplights and 5-MPH bumpers for '85 models.

It also contains plans to label cars for their crashworthiness, to produce a Car Book of the results, to provide greater protection from side impacts, to strengthen truck safety provisions and to deter drunk and drugged driving.

It even includes provisions for upgrading the handling of hazardous materials.

Joining Danforth, who chairs a Senate subcommittee on surface transportation, is the head of the powerful Senate Commerce Committee, Robert Packwood, Oregon Republican, and Senator Claiborne Pell, Rhode Island Democrat.

• Danforth, who has scheduled more hearings in May, hopes that at least some of his proposals will make it through Congress in this session. So far, there is no parallel House bill, but Rep. Timothy Wirth, Colorado Democrat, shares Danforth's enthusiasm for air bags, stronger bumpers and better consumer information.

Danforth's thesis is: "Highway safety is a matter of life, limb, and dollars. By applying proven technology to cars and trucks, we can reduce dramatically the toll of death and injury on the highways and save billions of dollars in public and private costs."

The air-bag proposal comes just before the oral arguments on the air-bag litigation before the U. S. Supreme Court. Danforth acknowledged that the Reagan Administration might hesitate to take positions on matters in litigation (as are bumpers, as well as air bags), but he said he felt strongly that Congress should not be hamstrung.

If lawmakers were to decide they could not act because of litigation that occurred when the Administration took it upon itself to thwart the will of Congress, said Danforth, that would just play into the Administration's hands.

On the other hand, Danforth does not view the Administration as a "rock-ribbed opponent" and he is not interested in "picking a fight." But he does expect the auto makers to be "very tough" on air-bag and bumper proposals even though he believes both are extremely cost effective.

Besides reinstating the parts of the occupant protection standard and the bumper regulation which NHTSA head Raymond A. Peck rescinded, the Danforth bill would upgrade side protection in cars, light trucks and

Pontiac P-car suffers from a weight problem

By Jim Plegue
Staff Writer

Pontiac's mid-engined Fiero sports car — the P-body — is still scheduled to debut this fall as an '84 model despite being beset with several manufacturing problems during its gestation.

AUTOMOTIVE NEWS has learned that the fiberglass-bodied two-seater, originally targeted to have a curb weight of less than 2,200 pounds, will now be tipping the scales at better than 2,550 pounds.

The weight gain is caused by Pontiac's need to substitute conventional cold-rolled steel for much of the high-strength steel originally slated for the car's skeleton, which engineers call "space frame."

Less than 15 percent of the steel used in the Fiero will be high-strength steel, sources said. The original goal was more than 50 percent.

But the result may be good news for Fiero buyers, according to one expert: Because engineers are more familiar with the properties of cold-rolled steel, fits and finishes will likely be better.

Because Pontiac is the first U. S. car maker to make extensive use of high-strength steel, it also has to develop machine-tooling and engineering processes specifically for that steel.

The inconsistencies of high-strength steel available in the U. S. have also proved troublesome for Pontiac, which found that it had to readjust dies frequently to keep parts consistent.

Pontiac engineers are looking for new areas to shave off weight in order to offset the Fiero's new poundage.

• Fiero will be built at Pontiac's old home plant in Pontiac, at a rate of 110,000 annually. Pilot production begins this summer. Fiero features styling similar to that of Fiat's X 1/9.

The Fiero's extra weight will surely result in a performance penalty, at least during the first year when the only engine offered in the car will be Pontiac's 2.5-liter inline four-cylinder. A four-speed transmission will be standard.

In 1985, however, the Fiero will pick up a new optional 2.9-liter aluminum V-6 engine. The 2.9-liter V-6 is based on Chevy's 2.9-liter V-6 powerplant and will be assembled alongside that engine at Tonawanda, N. Y.

Pontiac will add port injection and turbocharge the 2.9-liter engine for the 1986 model year.

Steel isn't the only problem Pontiac has had to overcome in its attempt to manufacture the P-car.

A top engineer from a GM sister division recently noted that the RRIM plastics Pontiac is planning to use for parts of the Fiero bodies are difficult to produce with a quality good enough for body surfaces.

They have another disadvantage, the engineer said: Over 100,000 units, steel becomes more economical to use.

An 'Encore' for AMC/Renault

DETROIT.—"Encore" will be the name of the new AMC/Renault three-door and five-door hatchbacks, which bow this fall as '84 models. The Alliance-derived FWD models will ride on a 98-inch wheelbase (same as the Alliance sedan), with overall length of 161 inches (three inches less than Alliance) and curb weight of 2,000 pounds. Encore is an appropriate moniker; the Alliance, first product of the AMC/Renault union, has been highly successful. Plans to add an optional 1.6-liter diesel engine to the Alliance line have been put off until next year, according to insiders.

Outline of GM/Toyota/UAW pact due by May 15

DETROIT. — The UAW hopes to have an outline of an agreement with General Motors and Toyota at its Constitutional Convention to be held in Dallas May 15-20. According to a UAW spokesman, it will be only a framework for a possible agreement if and when the FTC approves the venture.

Chrysler lists record profit

By Kathleen Hamilton
Financial Editor

Chrysler Chairman Lee Iacocca had been promising a $100 million profit for the first quarter, but the earnings he announced late last week far surpassed that: $172.1 million, the highest quarterly profit in Chrysler history.

And the profits came from making and selling cars, not financing or foreign exchange, emphasized Robert S. Miller Jr., executive vice president-finance.

Dealer orders lead Chrysler to believe it will be profitable again in the second quarter, Miller said. But it will take an upturn in the car market for a profitable year, he said.

Nonetheless, the $172.1 million ($1.97 a share) earned last quarter was more than in all of 1982, Miller said. It was 14.8 percent more than in the first quarter of 1982, when Chrysler announced profits of $149.9 million ($1.95 per share).

In that quarter, Chrysler's operation loss was offset by the sale of Chrysler Defense.

Sales of $3.1 billion were a 24-percent increase over the $2.5 billion of a year earlier. Worldwide factory sales of 354,206 units were a 19.3-percent increase.

Cash and marketable securities at the end of the quarter approached $1.4 billion, com-

$475,955 for 130 kits

Arizona police fleet to get air-bag retrofit

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The police car air-bag retrofit program is now officially under way.

Successful bidder is Romeo Kojyo Co., Ltd., a Phoenix firm with Japanese connections.

After NHTSA evaluates the kits and tests them, they will be installed in 130 late-model Ford LTDs (now Crown Victorias) waiting in the Arizona police fleet. Selection of other police fleets and vehicles for the remaining 370 will be made later by NHTSA.

These are driver-only systems and are supposed to supplement the protection given by belts.

NHTSA's other air-bagged test-fleet program is not yet under way although NHTSA and the General Services Administration have agreed on the specifications for the systems, which will be original equipment. So far, Ford is the likely bidder for the 5,000 compact government cars. Response from potential bidders is expected next month.

Romeo Kojyo was formed in mid-1981 by David Romeo, formerly Talley Industries' director of its air bag program. Some cash was put up by Junichiro Takada, president of Takata Kojyo of Tokyo — a maker of seat belts, bags, air cushion systems and operator of test equipment and facilities.

Takata hopes to become an air-bag supplier to Japanese car makers.

Money, office space, facilities and some cash for Romeo's firm came from another Phoenix company, Armel Industries, a cabinet maker for big business and industry. Washington representation for Romeo has come from Al Yamada, of Mike Masaoka Associates, a Washington (D.C.) representative of several Japanese companies, including Takata Kojyo.

Romeo bid $457,955 for the 130 air-bag kits for the Arizona police fleet (that does not equate to $3,522.73 per air-bag system since the successful bid includes development testing and make-ready costs). The bid reportedly was lower than the only other bidder, Breed Corp., a New Jersey company.

Romeo's main mission is to provide complete air-bag retrofit systems including the steering wheel.

The sensors will come from Technar, Inc., Arcadia (Calif), supplier for the air-bag system developed by BMW, and designer and supplier for the B-1 bomber. Technar has also worked with Calspan and Minicars in their experimental vehicle programs and for North American Rockwell and General Dynamics, and has supplied sensors to Ford and General Motors.

The inflator will come from Bayern-Chemie, GmbH, a subsidiary of the German Messerschmitt-Boelkow-Blohm GmbH and the Wasag Group. This is the one bought by Daimler-Benz for the driver air-bag it uses.

The retrofit kits can be adapted with minor hardware changes to Ford, Chrysler and GM police fleet vehicles — ones which are generally on the large size.

So far, besides the interest expressed in Arizona, 17 other states responded to NHTSA inquiries. So did nine specific localities.

Under the contract, the government will do a crash evaluation of the system, both by sled test and actual crash, at its East Liberty (O.) facility.

The specific vehicle and the police fleet for the remaining 370 air-bag kits have not yet been selected.

Retrofit is done by replacing one steering wheel with another, installing crash sensors, and providing a proper electrical circuit.

The government will provide the kits made by Romeo at no cost to the police and Romeo will conduct a training program, but fleet owners will have to provide facilities and labor for installation and maintenance (if any).

Fleet operators must also supply NHTSA with any maintenance records and accident data (if any).

Urban Gorilla

Mitsubishi Motor Sales of America launched the Montero sports utility vehicle in 22 major import markets with an advertising/promotional theme of "Urban Gorilla." The theme underscores Montero's versatility as a commuter or off-roader.

Hoopla and high hopes greet Tempo/Topaz

By Roger Rowand
Engineering Editor

OAKVILLE, Ont. — Ford Motor Co. rolled its symbolic Job One Tempo/Topaz off the line here amid buoyant predictions of soaring sales, the music of a six-man band and the lusty cheers of employes wearing black and white commemorative baseball hats.

The car that was met with all the traditional trappings that go with the first of a series was a four-door academy blue Ford Tempo.

On hand was Harold A. Poling, executive vice president, Ford North American Automotive Operations. He referred to the star of the day as "our billion-dollar one-two punch that will increase our sales and market share in both the Canadian and U. S. markets."

Poling said 30,800 advance orders had been received from dealers. The cars go on sale May 26.

"We're expecting Tempo/Topaz to be the best-selling cars in North America," he said. "And we're expecting the production run starting now to be one of our longest and most successful.

"So today is a historic mo-

GM's profits for quarter top $653 million

General Motors announced first-quarter profits of $653.1 million ($2.08 per share), its best showing since the second quarter of 1979.

The earnings were more than four times as much as in the first quarter of 1982, when net income was $128.3 million (41 cents a share).

GM cited efficiency gains, sales gains by its compact J-cars and midsize A-cars and GMAC profits as the main contributors to its profits gain.

GMAC earnings, including its Motors Insurance subsidiary, were $257.1 million. That was an increase of 88.6 percent from the first quarter of 1982, when GMAC earned $136.3 million. Most of the increase was from financing.

GM's sales volume of $16.74 billion was up 13.7 percent from the first quarter of 1982's $14.72 billion. Worldwide unit sales climbed 21.9 percent, from 1.47 million to 1.79 million for the quarter. GM pointed out that J-car sales climbed 39 percent and A-cars, 55 percent, over the year-ago period.

Overseas retail deliveries of 419,000 cars set a GM record for the first quarter and represented a gain of almost 19 percent over the first quarter of 1982.

GM said its dealer orders in the U. S. are at the highest level in three years. Since the beginning of the year, more than 29,000 GM employes have been recalled from indefinite layoff and another 16,000 are scheduled to return this quarter.

"The fundamentals are in place for a recovery year for the industry, and further improvement in GM's performance is anticipated as the economic upswing continues," the company said.

GM's cash and marketable securities exceeded $4.7 billion at the end of March, compared with $3.1 billion at the end of 1982 and $1.3 billion at the end of March, 1982.

Its working capital also increased significantly, from $1.6 billion at the end of March, 1982, to $1.7 billion at the end of 1982 and $2.6 billion at the end of the most recent quarter.

Biggest FTC case of year, chairman says

Early decision seen for GM-Toyota

By Kathleen Hamilton
Financial Editor

The FTC expects to decide on the General Motors-Toyota joint venture proposal within 60 days, Chairman James C. Miller III said last week.

He said he is pushing for what may be unprecedented public hearings on the linkup of the two auto giants. The case will be the biggest for FTC this year, he said.

Miller also told reporters before his speech to the Economic Club of Detroit that the FTC soon may file some suits against dealers who recently offered low-interest loans in manners the FTC believes is deceptive.

The FTC won't be judging the GM-Toyota joint venture as harshly as it would a potential merger, Miller said. The FTC's equivalent of the Justice Department's Herfindahl index, which analyzes the monopolistic potential of mergers, therefore will not be strictly applicable, Miller said.

The FTC's main criterion in analyzing the proposed joint venture to produce subcompacts in California will be the effect on consumers, Miller said.

Employment will also enter into the picture—not necessarily whether laid-off UAW workers at the Fremont plant will be rehired when GM and Toyota begin producing cars there, but the general effect of the joint venture on the nation's employment levels, Miller said.

Chrysler Corp. is the only auto maker to date that has officially objected to the joint venture, but other makers, including Japanese, have expressed similar concerns, he said.

Although he would not name which Japanese importers objected to the proposed linkup, he said these makers had concerns about their arrangement with U. S. makers.

The FTC has talked to virtually all Japanese auto makers on the issue, Miller said.

Although GM was in contact with the FTC about the potential agreement with Toyota before the papers were actually signed, Miller said this does not make an FTC approval a foregone conclusion. He said he does not believe GM benefited from this contact in drafting the agreement.

Miller said he believes statements by GM and Toyota that they would cancel their plans for a joint venture if faced with significant FTC disapproval.

On the issue of deceptive interest-rate ads by auto dealers, Miller said the problem is just about over. The FTC has sent out interpretations and examples to dealers and their trade groups.

In his speech to the Economic Club, Miller, an economist, decried government intervention to promote high-technology industries and protect declining basic industries.

The U. S. already has a reindustrialization policy under President Reagan, he said: Tax reductions, restraint of the growth of government spending, deregulation and stabilization of monetary aggregates.

Sounds of an Eagle

A Goodyear engineer prepares to measure the sound made by the company's new Eagle GT radial high-performance tire as it rolls on a 10-foot-diameter wheel mounted below the floor of a sound absorbing chamber.

Toyota and AMC granted waivers on diesel NOx

WASHINGTON. — Look for Toyota and American Motors to join the list of makers offering diesel options in their 1984 model year.

The two firms have just won EPA waivers of the critical 1984 oxides of nitrogen emission standards that will permit it.

AMC was given a waiver to the allowable limit of 1.5 grams per mile for a 1.6-liter diesel and Toyota received a waiver to a like limit for a naturally aspirated and a turbocharged 1.8-liter diesel it wants to market.

EPA said neither firm had developed emission control technology capable of meeting the 1.0 gpm NOx standard.

Waivers from that level to a maximum level of 1.5 gpm were established by Congress when it reauthorized the Clean Air Act in 1977.

Big trucks due from Japan, dealers told

By Jack Walsh
Truck Editor

BOSTON. — America's big-truck dealers were warned here to prepare for the "Japanese problem" which long has plagued the nation's auto dealers.

In his keynote address at the 20th annual convention and exposition of NADA's American Truck Dealers Division, John B. Curcio, president, Mack Trucks, Inc., said:

"If you think the Japanese problem was something only your 'cousins' in NADA had to endure, I've got news for you. You're going to have the problem, too, and we all better prepare for it."

Curcio cited an interview in a Canadian newspaper in which he said the head of a major Japanese truck firm (Hino) "made their intentions clear." He quoted the executive:

"I think all of the diesel-truck manufacturers in Japan firmly believe that they can't expect any further growth in sales unless they enter the U. S. market—the U. S. market is the last and biggest market. The four major truck makers in Japan have virtually exhausted the rest of the international market with only the U. S. left untouched."

• Curcio told the dealers "you can be sure that when they come, it will be with the full and total support of their government, and I'll also guarantee you there is no way we will gain the same access to their home market."

Addressing the industry's current problems, he said the entire world is undergoing an economic transformation with "deep-seated effects that won't go away very easily."

"There will be no return to the world that we have per-

Ford offers new tilting hood

A new optional tilting hood and fender front-end assembly will be offered on 1984 Ford F-Series medium and heavy trucks and B-Series school-bus chassis. The full-tilt hood provides easy access to the engine compartment for stand-up servicing, the company said.

1984 Class 6/7 Fords get new brake system

Ford Truck Operations will introduce a new hydraulic power-braking system for its 1984 Class 6 and Class 7 medium and heavy trucks.

The new Ford system meets federal requirements for a split brake system and is powered by an improved integral booster pump, eliminating certain undesirable characteristics of former vacuum booster systems, according to E. T. Mabley, Ford heavy truck development manager. It combines floating caliper front disc brakes with rear drum brakes.

"The new hydraulic brake system, with its spring-set, in-wheel parking brake, opens up many vocational applications previously limited to air-braked vehicles," Mabley said.

"The spring-set parking brake provides a stable platform with no driveline slack as required for boom, bucket, outrigger and cherry-picker equipped trucks. On fire trucks and other emergency vehicles, parking brakes can be released almost immediately upon engine start-up with no waiting for air pressure to build up.

"The inability of unauthorized persons to release the parking brake when the vehicle is shut down will appeal to school bus operators," he added.

"The dash-mounted control knob permits the application of parking brakes without wasted time and effort for rubbish removal, city delivery and other multi-stop operations. And the new system provides virtually unrestricted parking capability for automatic transmission equipped vehicles."

• Power source for the Ford Hydro-Max integral booster master cylinder is an engine-mounted, belt-driven hydraulic pump that delivers fluid under pressure. This activates the dual master cylinder, applying the service brakes.

Ford for 1984 also will introduce a new rear suspension system for tandem-axle highway tractors. Developed by Ford and

Truck Dealer of the Year gets award

Richard L. (Rick) Warner, left, president, Rick Warner Ford, Salt Lake City, was presented the Truck Dealer of the Year award by Terry Sweeney, national automotive manager, Business Week magazine, sponsor of the award. The presentation took place at the 20th annual convention of the NADA American Truck Dealers Division in Boston.

Voice commands reduce fuel use in shifting gears

Trucks operating in heavy urban traffic can get optimum fuel consumption when drivers follow voice commands given by a gear-change indicator, according to its manufacturer, Econocruise Ltd., Rugby, England.

The Gearshift Programmer has a synthesized human voice which instructs the driver to "change up" or "change down" when engine and road speeds require a shift to maintain optimum efficiency. Units can be programmed to speak commands in any language. The efficiency curve of optimum change points for any specified engine is factory computed and fed into the unit's microcomputer.

Reportedly, the device can also reduce the possibility of engine damage that might result from inexperienced drivers.

The unit is fitted under the dashboard and wired into the radio speaker. It comes with an integral speed control system so the driver can select a maximum speed and, at the flick of a switch, maintain that speed without effort.

Light, medium trucks set pace

2-month registrations top year ago by 12 pct.

Two-month registrations of new trucks of all types in the U. S. were almost 12 percent higher than a year ago, with gains in two of the three market segments and four of the eight weight classifications.

R. L. Polk & Co. reported January-February tallies totaled 365,407 units, an increase of 11.9 percent over the 326,674 registered in the comparable period the previous year.

GVW Table on Page 32.

In February, there were 176,611 registrations, an increase of 3.2 percent over the year-earlier 171,075.

Heavy trucks—Groups 7 and 8 vehicles—were the only types to show a decline in the first two months of 1983. Sales and registrations of these units have been steadily declining since 1980, and the outlook for a significant upturn in the short term isn't too bright.

Registrations of medium trucks were higher than a year ago for the two months in spite of a small drop in tallies in February. Light trucks continued their strong showing, with Group 3 registrations the exception.

• Through February, light-truck registrations totaled 342,867, an increase of 13.8 percent over the year-earlier 301,410.

The Group 1 count was 15.1 percent higher than last year, from 167,590 units to 192,833. There were 149,741 Group 2 tallies this year, up 14 percent from the year-ago 131,409.

Group 3 registrations were off 87.8 percent for the first two months, from 2,411 units in 1982 to only 293. February was the second month in a row that the Group 3 count trailed the year-earlier count. In 1982, the tallies were higher than the previous year in each of the 12 months.

Registrations of medium trucks through February totaled 6,100 units, an increase of 7.7 percent over the year-earlier 5,666.

Fifty-three Group 4 trucks were registered in the first two

IH regains lead by slim margin in HD registrations

International regained the lead in heavy-truck registrations in the U. S. in February, marking the first time since the same month a year ago that its totals have topped No. 2 Ford.

International tallies during the month exceeded Ford's by almost 200 units, and gave the former a 22-unit margin for the first two months of 1983.

Through February, according to R. L. Polk & Co. statistics, International had 3,995 Groups 7 and 8 registrations, compared with 3,973 for Ford.

The two-month industry total

Japanese notch one of every 10 new car sales in Europe

Nissan tops Toyota for leadership, mainly on its strength in the United Kingdom

By Richard Feast
European Editor

Japan's auto makers accounted for roughly one of every 10 new car sales in Europe in 1982. An analysis of registrations in national markets by AUTOMOTIVE NEWS reveals that while the Japanese made the deepest inroads into countries with no auto industry, they made the bulk of their sales in two highly industrialized countries: West Germany and the United Kingdom, where more than two of every five sales were made.

Nissan (Datsun) outsold its larger rival Toyota almost entirely on the strength of its popularity in the UK. The British importer of Datsun cars is the most successful Japanese car retailer in all of Europe.

The survey looks at Japanese performance in 12 important European markets. It does not take into account the large (1.686 million) Italian market because Japan's annual quota is restricted there to only 2,200 units.

Full make-by-make details were unavailable from three of the smallest-volume countries—Ireland, Greece and Portugal. Total markets for the three countries last year amounted to some 223,700, of which around 63,400 units (28 percent) were claimed by Japanese makers.

New car sales in the dozen countries surveyed amounted to 8,088,199 last year. Japanese manufacturers retailed just under 890,000, for 10.9 percent of total.

If the whole of western Europe is taken into account—including Italy, Ireland, Greece and Portugal—the total market reaches 9,997,900 units, with the Japanese accounting for 953,600 or 9.5 percent.

The distortion is provided by Italy which keeps such a rigid clamp on Japanese imports that France and the UK look benign in comparison.

Nissan's leading role in Europe came mainly on the strength of its UK presence (93,200). It also did well in Germany, Holland and France, were in Austria, Sweden, Norway and Denmark, where it was the leading Japanese make. But its numbers were best in Germany, which also was the top-

Switzerland (292,667)	1,097	14,084	8,375	13,525	7,246	8,364	5,301	19,936	77,928 (26.6)
UK (1,555,027)	4,743	93,213	16,333	15,139	8,640	2,700	2,763	27,590	171,121 (11.0)
West Germany (2,155,537)	5,870	42,490	32,072	40,573	33,530	4,700	11,942	40,037	211,214 (9.8)
TOTAL (8,088,199)	20,846	250,823	108,948	172,524	94,337	22,490	33,369	184,742	888,079 (10.9)

This table, compiled from national and industry sources, shows Japanese car manufacturers' strengths and weaknesses in Europe. Figures are registrations for 1982. Missing are Italian statistics because Japanese annual sales there are limited to only 2,200.

Detailed registrations from three other small volume countries were unavailable: Ireland, Greece and Portugal. In Ireland the Japanese had about 29 percent of a 72,200 market. In Greece it was 45 percent of a 79,900 market, and in Portugal about 8.5 percent of 71,600 units.

France limits Japan to no more than 3 percent of the new car market. In the UK a long-standing "gentleman's agreement" puts the share at 11 percent.

The accompanying table indicates how closely the Japanese stick to their commitments — 2.9 percent in France and 11 percent in the UK.

where it outsold other Japanese makes. Its total of 250,800 was well ahead of 184,700 by Toyota, which was the leading Japanese car retailer in Belgium, Switzerland, Finland and Spain, and showed good sales in Germany, the UK and Holland.

Third in the rankings, not far behind, was Toyo Kogyo (Mazda) with 172,500. It's strengths

selling country for Daihatsu, Honda, Mitsubishi, Suzuki and Toyota.

Subaru's best market in terms of volume was Switzerland. Nissan's was the UK.

Germany (211,200) and the UK (171,100) absorbed the most Japanese cars, followed by Holland (91,000), Switzerland (77,900) and Belgium (74,100).

As for market penetration, Japan's was highest in Norway (36.8 percent) and Fnland (35.5 percent). In other markets it reached more than a quarter—Austria, Denmark and Switzerland—and in Belgium and Holland the proportion was over one-fifth.

It seems unlikely the Japanese presence in Europe will expand much from these broad levels, which have been in place for a number of years. Unfavorable exchange rates, a more competitive domestic industry, the existence of quota levels in many countries and governmental desire to protect key industries are some of the reasons.

However, a strengthening Japanese presence will be found over the next few years in other areas. Examples are the joint-venture production between Alfa Romeo and Nissan, Austin Rover and Honda, and Nissan and Motor Iberica on commercial vehicles in Spain.

There also is the prospect of General Motors increasing its light commercial-vehicle presence through its affiliate, Isuzu. Observers also are watching Ford which has been using Toyo Kogyo as a source for some of its "Fords" — including Greece but mainly in the Asia-Pacific.

Ford is known to have completed cost studies between its European plants and TK's, as well as costing the assembly of TK vehicles in Europe. It is understood that results of the studies prompted the company to investigate construction of a plant in Portugal. The future of this project has yet to be decided.

Nissan insists its ambitious plan to build a 200,000-unit-a-year factory in the UK has only been postponed.

The magic number is 11

Renault rolls out its new hatchback

By Richard Feast
European Editor

Renault really needed its 11 hatchback. Sales of the 9 sedan on which the 11 is based fully lived up to the French auto company's high hopes, but lagging interest in the 14 hatchback which the 11 will replace was proving embarrassing.

The 11 fits the market segment Renault calls M1 (lower middle range), competing in Europe with Opel Kadett, Volkswagen Golf, Ford Escort, Fiat Ritmo, Talbot Horizon and BL's Maestro. It is an important segment and, according to Renault, the only one in Europe showing signs of growth. In 1980 M1 took 26.9 percent of the total market, and boosted volume 15 percent from 1978 through '80. Renault believes that by the end of this year M1 sales will represent 32.1 percent of total, an increase in units of 38 percent over the six years. During that time the total European market ranged in size from 9.66 million in 1981 to 10.33 million in 1979.

The company sees several reasons for M1 growth. It identifies tough economic times which kept buyers from moving upmarket. Another factor was the heavy influx of new models such as Escort, Kadett and Renault 9. Another major model launch comes this fall — the VW Golf replacement.

Creating the 11 from the 9 allows Renault to cover the market sector with a wide variety of models. The 11 offers a choice of three- or five-door bodies, four- or five-speed manual transmissions and three-speed automatic, and four gasoline engines (48-HP 1.1-liter, 60-HP, 68-HP or 72-HP 1.4 liter). A diesel version, recently introduced in the 9, cannot be far away, either.

With five equipment levels the car was launched in France last month as an 11-model range. Top models are available with the most ambitious set of electronic aids seen in a European car. The package, comprising electronic instrument panel, voice synthesizer and hi-fi sound system with four 20-watt channels, costs the equivalent of $815 in France.

Renault believes hatchback bodies and electronics will appeal to "active, dynamic and

Renault believes the 11's hatchback body and a batch of electronics will appeal to young, well-to-do buyers.

lively" people who are younger and wealthier than 9 sedan buyers.

According to Michel Dubrulle, Renault's marketing director, the electronics package is essentially for Europeans. If acceptance is good it could go into the American Motors-made version of the 11, modified for U. S. requirements. "With electronics you can do so many things. The difficulty is making the best choice without confusing the driver," Dubrulle maintains.

When Renault introduced the 9 it spoke of producing 2,500 a day within one year. That was achieved. It's aiming for 3,300 a day by the end of this year for the 9 and 11 combined. European production plants are at Douai in northern France and Palencia in Spain.

Renault acknowledges that 11 will take customers from the 9, but believes they will sell in roughly equal numbers, and its flexible production facilities will be able to react swiftly to public demand.

In last year's French market the 9 jumped immediately to No. 2 on the best seller charts. By year-end it had sold just under 200,000 units for 9.7 percent of the market. With 9 and 11 combined, Renault is aiming for 15 percent.

Last year the 14 — the model 11 replaces — accounted for 2.1 percent of sales with 42,900 units. With no possibility of a diesel and without an automatic transmission, appeal was limited. It was outsold by the revised Citroen Visa II in France (95,100) and by imports Escort (60,200) and Golf (51,100).

Renault is looking for improved sales in Spain, where last year it was market leader with a 32 percent share.

While Renault sells very well in France, Spain and Italy — where it grabbed a staggering 11 percent with 185,400 sales — its weaknesses in Europe are West Germany and the United Kingdom, where it hopes the 11 improves its fortunes.

Last year Renault sold 83,900 cars in Germany, a 3.9 percent market share. Three years earlier the figures were 130,400, 5 percent. In the UK last year it sold 64,100 for 4.1 percent. In 1979 it was 93,500 and 5.5 percent.

Overall, Renault's business has steadily increased over the same period. In Europe it has done so on the strength of French, Spanish and Italian sales. The German and UK problems have to be solved if it is to stay on the same course.

No gain in Spain from 'eased' barriers

Concessions affect only 3 percent of the market

The decision by Spain to ease its tariff barriers on cars from Common Market countries will not provide the bonanza that has been predicted in many European quarters.

The tariffs are still high and on a limited number of vehicles. The most that can be said for them is that they constitute an easing towards completely tariff-free barriers which will be necessary when Spain enters the Common Market in the mid-'80s.

The concessions negotiated between the European Commission and Madrid in the middle of last month will affect some 15,000 cars annually — or less than 3 percent of the Spanish market last year, for instance.

At present an EEC car exported to Spain carries an import levy of 36.7 percent. Spanish cars exported to EEC countries are subject to a tariff of 4.2 percent.

The figures go some way towards explaining why imported cars accounted for only 12 percent of a market which amounted to almost 536,000 last year. However, the proportion of imports in Spain has been growing steadily over the past few years.

By contrast, total Spanish car exports last year amounted to just over 495,000, or 53 percent of production. The vast majority were destined for EEC countries.

The country's leading exporter was Ford (158,000), followed by Renault-Fasa (134,200). Seat exported 124,800 vehicles, most of them as Panda models to be sold through the Fiat network as part of the divorce settlement between Seat and Fiat.

Spain's exports will be vastly expanded this year as General Motors' new Zaragosa factory begins turning out Opel Corsas (and Vauxhall Novas) in earnest.

Under the terms of the latest Brussels-Madrid accord, Spain will reduce the tariff on 5,000 cars in the 1.3 to 2-liter category to 19 percent, and on 10,000 cars in the 2 to 2.6-liter segment to 25 percent.

Companies which will benefit most from these reductions will be those with established sales networks in the country. In the main those are the companies which manufacture there—Ford, Renault, PSA and now General Motors.

The Volkswagen group, which is proposing an assembly link with Seat, will also be a beneficiary.

The easing of tariffs will also be seen with pleasure by Daimler Benz and BMW. Each sold around 5,000 units in Spain last year, which made them substantial importers.

The same applies to Volvo, which assembles in the Common Market country of Belgium even though it is basically a Swedish company. Last year Volvo sold 1,600 vehicles in Spain.

It was mainly the higher end of the market which remained buoyant as car sales in general slumped in Spain over the past few years. Last year proved the turning point, though, with sales increasing by just under 6 percent.

Sunshine in South Africa

Convertible Specialists, Gardena, Calif., reports it has developed a convertible top with power option for the Renault Le Car (R-5). The conversion is being done in South Africa for sale there and is being considered for Europe. It is not sold in the U. S.

On remaining '82s

Talk about price cuts: Rolls down by $14,000

By John A. Russell
New York Staff Writer

LYNDHURST, N.J.—In a move reflecting the current strength of the dollar against the British pound sterling, Rolls-Royce Motors has reduced the U. S. prices of all remaining 1982 models $14,000 to $18,000.

The largest reduction of $18,000 is on the sticker price of the Silver Spirit four-door sedan, cutting the car from $111,000 to $93,000.

The Silver Spur four-door sedan was reduced $16,000, from $119,000 to $103,000, while the Corniche convertible was reduced $14,000 from $162,500 to $148,500 and the Carmargue coupe from $158,600 to $144,600, a $14,000 reduction.

This is the first time since 1967 that Rolls-Royce has announced a major price reduction and, according to a company spokesman, the company may be the first importer to recognize the strength of the dollar against other world currencies.

George Lewis, president of Rolls-Royce Motors said the decision to reduce the prices was made "a couple of weeks ago" when the pound dipped below $1.50.

The reduction puts Rolls-Royce in its traditional pricing range of approximately 50 percent above the highest priced Mercedes-Benz, which is "where we should be," according to Lewis. Before the decreases, the Silver Spirit was twice as much as the highest priced Mercedes-Benz.

• In a previous interview with Automotive News, Lewis stressed the effect of the exchange rate on the cars. He said it had driven the price up "stratospherically."

Last week, he said the latest strategy was entirely local, meaning confined to the U. S., and was tied to the exchange rate.

Rolls-Royce sales in the U. S. declined last year to 908 units, 250 less than in 1981. To weather the slump in 1982, the company offered incentives to its dealers. They included floorplan assistance which boosted wholesale orders to over 1,000 for the year.

Lewis said that when the Silver Spirit moved into the six-figure pricing category, combined with high interest rates and the slump in the national economy, there was a sales problem.

Rolls-Royce's problems with the exchange rates were laid directly to the North Sea oil discovery which pushed the pound to $2.44 at its highest point. Since then, it has been gradually coming down.

The current price reductions affect only 1982 models since the 1983 models are not yet in dealer showrooms.

Lewis said the Corniche pricing reflects the '83 model, but pricing decisions on the Spirit and the Spur would wait until the company had enough cars to ship to dealers, which will be in another month. But he indicated the pricing philosophy would be followed through with those models.

Bentley has also benefited from the reduction with the Mulsanne four-door sedan dropping $17,900 to $92,470 and the Corniche convertible being reduced $13,960 to $147,990.

Lewis said there was a current inventory of 160 cars in the pipeline and 290 at the 70 dealerships. He said the norm is 130 cars at Rolls-Royce and between 200 and 220 at the dealerships.

2-month truck registrations top year ago by 12 pct.

Continued from Page 16

months, compared with only four a year ago. The 1983 Group 4 count was the highest since 1979, when 2,555 of these units were tallied through February.

Two-month Group 5 tallies were off 21.4 percent, from 145 units in 1982 to 114. The Group 6 total was 5,933 units, a gain of 7.5 percent over last year's 5,517.

• Heavy-truck registrations through February dropped 16.1 percent to 16,440 units, compared with 19,598 a year ago.

Group 7 tallies this year totaled 7,121 units, a decline of 14.4 percent from last year's 8,320. There were 9,319 Group 8 registrations, down 17.4 percent from the 11,278 units tallied in the first two months of 1982.

Through February, No. 1 Ford accounted for 32.06 percent of the industry total with 117,139 registrations. Its share was 5.23 percentage points higher than a year ago, when it accounted for 26.83 percent with 87,651 tallies.

Runner-up Chevrolet's two-month registrations were down slightly from last year when it was the industry leader, and its share of the industry total was off almost four percentage points.

Through February, Chevrolet tallies totaled 109,883, which accounted for 30.07 of the total. At the same time in 1982, Chevrolet had 33.92 percent of the count with 110,805 tallies.

IH regains lead by slim margin in HD registrations

Continued from Page 16

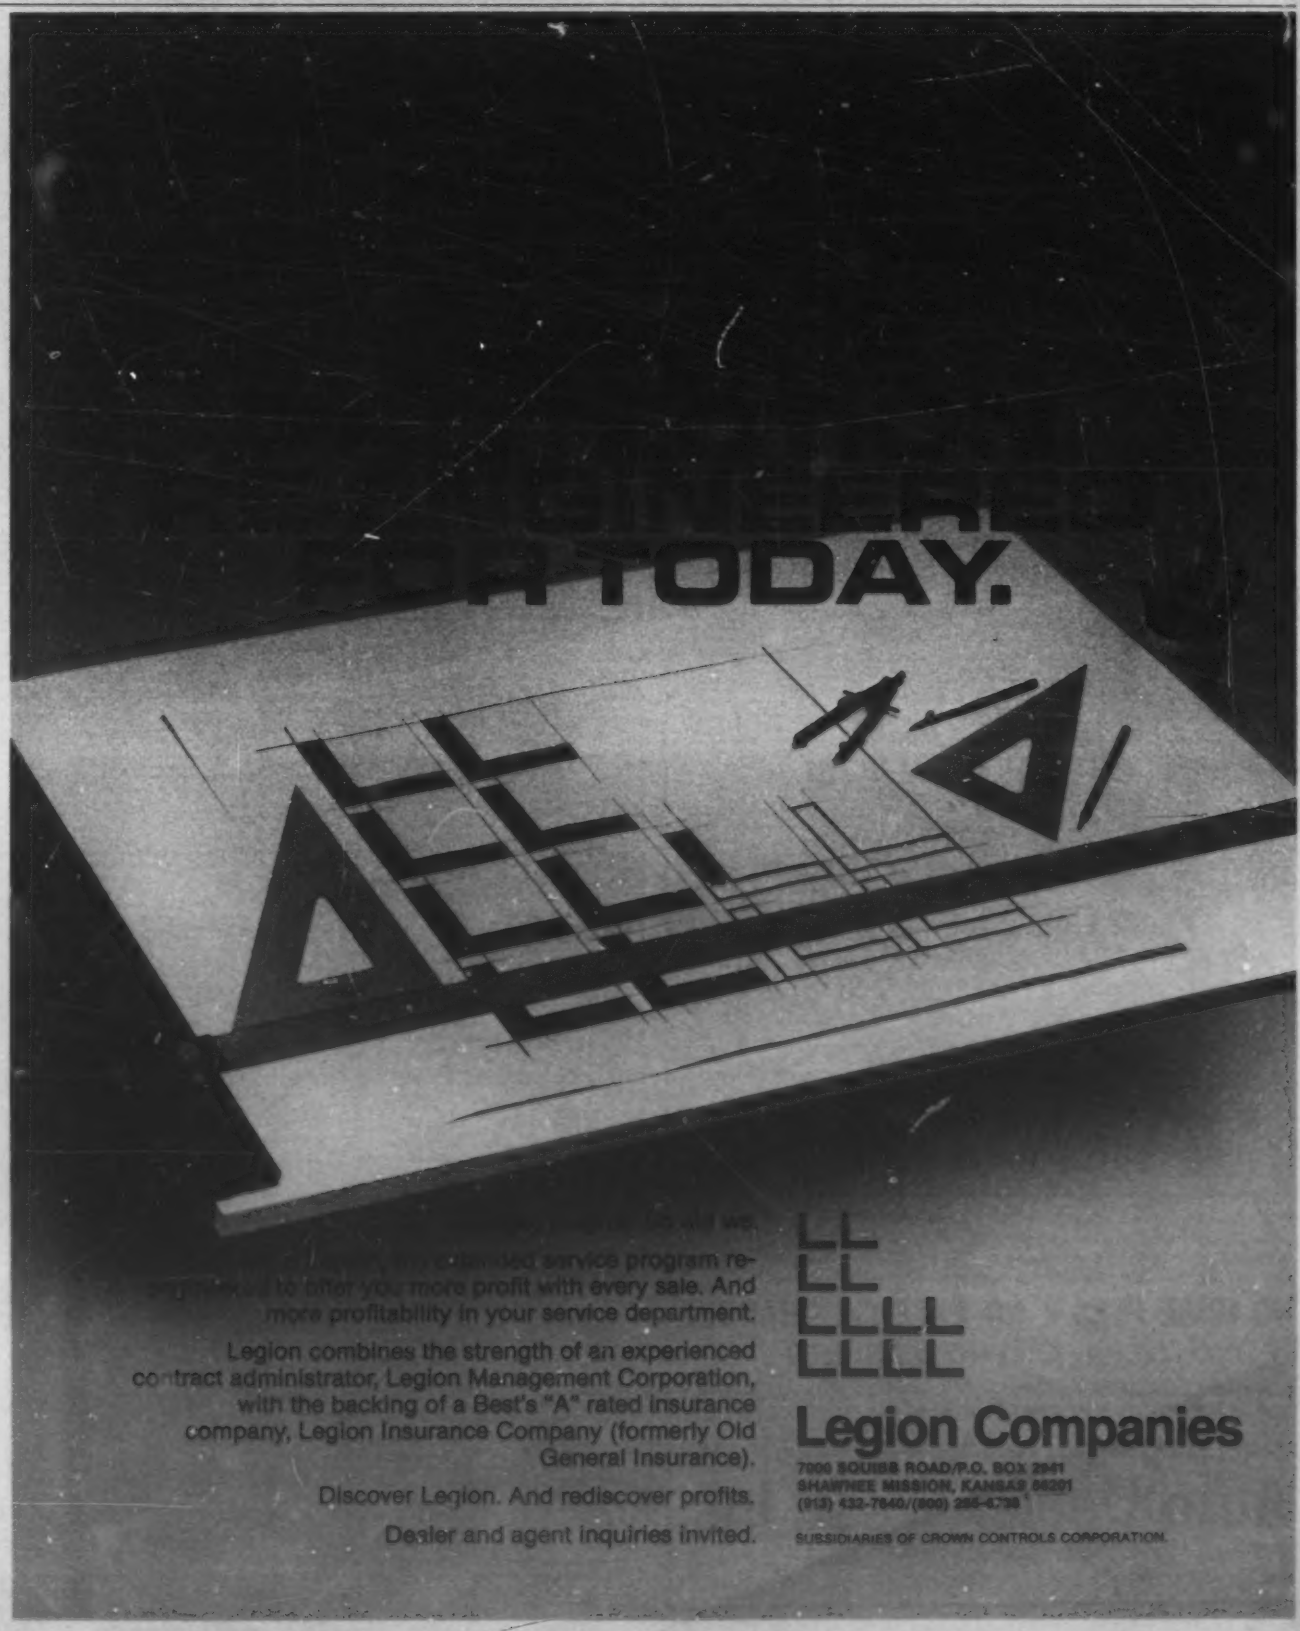
was off 16.1 percent from the like period a year ago, 16,440 versus 19,598. In February, 7,624 big trucks were registered, a decline of 18.6 percent from the year-earlier 9,371.

International and Ford shares of the total industry tallies for the first two months were up over 1982 and came at the expense of GMC, whose penetration dropped five percentage points from last year.

International registrations accounted for 24.30 percent of the total, a gain of 2.76 percentage points over 1982. Ford took 24.17 percent, 2.94 points higher than last year.

The GMC share for the first two months was 12.81 percent on 2,106 tallies, compared with 17.85 percent on 3,498 a year ago.

Last year at this time, GMC was working on a big order of medium trucks for the Ryder System. Group 7 registrations in the first two months of 1983 were 1,415, compared with 2,248 a year ago.



TST

NEW PRODUCT BREAKTHROUGHS

ACI-DOX

An effective answer to paint spotting from Acid Rain – fallout, cement, etc., without compounding. **Aci-dox's new unique cream formula** can remove stains from paint with **one simple application.**

TST 5000® WITH TEFLON®

With over 5000 Teflon® particles interlocked into every square inch of paint – positively **the finest, most effective paint sealant** available anywhere. No reapplications required with 5 year new car warranty. Fully tested and proven.

Straight Facts from the Leader in Automotive Protection.

Tells Ohio group innovation is goal of Buick City

Reuss: Efficiency a must to compete

LAKE BUENA VISTA, Fla.—The American consumer is, at long last, returning to the marketplace — but as a far different consumer than business has seen before, said Lloyd E. Reuss, Buick general manager.

"The consumer has learned from the recent past as much as we have," Reuss told the 50th convention of the Ohio Automobile Dealers Assn., "so business will have to change its concepts to meet the demands of that changed consumer."

Reuss said, "The consumer has learned to prioritize his purchases, and he knows the increased competition in today's marketplace gives him the opportunity to buy only products of the highest quality, the most durability and reliability, those with superior overall value.

"And," he cautioned the dealers, "if you and I don't offer that quality and value, someone else will."

Characterizing the consumer of the 1980s and 1990s, Reuss said people will be buying only those products and services which best meet their individual needs. Efficiency of products also will be a prime factor in the buying decision but, with respect to automobiles, not only MPG efficiency.

"The question won't be 'How inexpensive is this car to operate?' but 'Does the car perform the duty cycle I want in the most efficient way possible?' So, the goal of the manufacturer must be to design vehicles for a variety of transportation needs, vehicles that meet each of those needs efficiently," he said.

• Underlying those consumer characteristics and demands, Reuss said, is one foundation of business success — the customer's total satisfaction with the goods and services offered.

Delivering that total customer satisfaction requires manufacturers to be more innovative than ever in their products, processes and procedures and in the ways they deal with people, he said.

Buick's definition of performance includes fuel economy, Reuss said, but it also means "acceleration, speed when it's needed, precise handling at all times, positive braking. In other words, total performance."

Innovation in the entire manufacturing process is the goal of Buick City, the manufacturing and assembly operation which will produce a new Buick passenger car for the 1986 model year.

"It's going to be the most technically, logistically and socially sophisticated complex in the world," Reuss said.

Buick City will employ just-in-time inventory supply. "This 'stockless inventory' has already been proven — compared to 1979, our 1982 inventories were reduced by $100 million," he said.

"But methods and machines are only a small step in the quality and customer satisfaction process," Reuss said. "The real determinant lies with the men and women of the organization.

"Some of our employes have told me Buick used to hire peoples' hands and backs, but that now we're using their minds, as well. And that's the essence of successful competition in our constantly changing environment," he said.

it's the only way we could top the new design of America's favorite sports cars. The convertible top provides a striking difference for two already extraordinary cars.

You can offer these full four passenger convertibles in a choice of ten color coordinated tops available with the standard convertible top or with rear portholes (no extra charge) that meet 1984 federal regulations. You're assured of quality construction with the added assurance of heat sealing at the seams and windows. Flush fitting latches fit snugly so the sun visors maintain their flush fit. Priced from $3395 on volume purchases.

Licensed manufacturers and distributors are located throughout the U.S. including Pompano Beach, FL, Newington, CT, Fraser, MI, Louisville, KY and Blaine, WA. Drop shipment is available to all plants for conversion.

Choice territory is still available for selected builders and dealers. Builder and dealer inquiries are invited.

Watch for the introduction of the 1983 Convertible Corvette, currently in the prototype phase of construction.

Total is 132,387, a dip of 2 pct.

Auto production slips for week

By Patricia Hoffman
Staff Writer

Last week's domestic car production was down 2.86 percent from the previous week's total, but it was up 12.48 percent from that of the comparable 1982 period.

The makers targeted output last week at 132,387 cars, down from the previous week's 136,287, but up from 117,703 built the same week last year.

Breakdown for last week by company was: General Motors, 57.40 percent; Ford Motor, 24.55 percent; Chrysler Corp., 13.29 percent; American Motors, 2.51 percent; Volkswagen of America, 1.60 percent and Honda, 0.65 percent.

Year-to-date, the manufacturers have finished 1,901,639 units, a 30.95 percent gain from last year's 1,452,142.

The GM Oklahoma City point, source of Citation, Celebrity and Century models, was idle last week (April 18) for plant rearrangement. The facility phased out Citation production and will resume today (April 25) with Celebrity and Century.

Ford's Kansas City plant remained closed last week for changeover to Tempo and Topaz. Assembly of Fairmont and Zephyr ended there March 14. Production of the new cars is slated to begin May 2.

Ford's St. Louis and Chicago facilities will work two nine-hour shifts Monday through Friday this week and worked two eight-hour shifts last Saturday (April 23). In addition, the Lorain plant will work two 10-hour shifts Monday through Friday this week.

GM's Willow Run plant, source of Omega and Skylark, is closed this week (April 25) for inventory adjustment. The plant is scheduled to reopen May 2. About 4,500 workers will be temporarily laid off.

Six GM assembly lines worked overtime last Saturday (April 23): Arlington, Baltimore, Doraville, Norwood and the LeSabre and Regal lines at Flint. The LeSabre line worked one eight-hour shift while the Regal line worked two eight-hour shifts.

All Chrysler plants will operate on overtime this week. Belvidere, Jefferson and Newark will work two nine-hour shifts Monday through Friday. Jefferson also worked two eight-hour shifts last Saturday (April 23).

Hoopla and high hopes greet Tempo/Topaz Job One

Continued from Page 3

ment, a major $1 billion step in the strengthening of our North American Operations."

Poling said those operations are showing a profit for the first time in about four years.

• Robert White, president of the UAW in Canada, had a quip or two.

"Glad to see you're in the black, Harold," he told Poling in reference to concessions his union has made recently.

White also had what he called a suggestion for future collective bargaining.

"After seeing the enthusiasm here this morning, I think perhaps we should have time set aside every Monday morning for a band concert," he said.

He also noted that the plant's 39 robots — more than in any other Ford plant—were not on hand for the festivities.

White took advantage of the occasion to blast Japanese car makers as he has in the past. He said he expects that the Canadian government soon will be urged by a study committee on which he sits to get tough with the Japanese.

"We'll tell the Japanese, 'if you want to sell here you've got to build here—there are no two ways about it,'" he said.

After the roll-off, Poling said he expects no swift jump upwards from a persisting industry annual car sales level of around 6 million units.

"By the end of the year we could be at a 9.5 million to 10 million unit rate," he said.

Fraser to teach after leaving UAW

DETROIT. — UAW President Douglas A. Fraser will join the faculty of Wayne State University as University Professor of Labor Studies after he retires as UAW President next month.

Fraser will join the faculty on a part-time basis. He has also accepted a teaching position at the University of Michigan.

Truck production holds at 48,854; all plants work

With all truck assembly plants reported working for the second consecutive week, last week's output was about the same as the previous week's total.

Last week, the truck manufacturers scheduled 48,854 units, compared with the previous week's 48,543, and output rose 4.47 percent from 46,765 built in the comparable 1982 period.

So far this year, the makers have finished 650,934 trucks, a 10.60 percent gain from last year's 588,537.

Saturday overtime was scheduled last week at General Motors' Pontiac point.

Monday through Friday this week, Ford Motor Co.'s Twin Cities plant will work two nine-hour shifts; the Michigan Truck plant in Wayne will work one nine-hour shift, and the Lorain van plant will work two 10-hour shifts.

Chrysler's St. Louis and Warren points are slated to work one nine-hour shift daily this week with no Saturday overtime.

Volkswagen of America announced that production of pickups at its Westmoreland point will continue into May. Pickup production had been scheduled to end April 21 with no date set for resumption.

Canadian output climbs 32 pct.; Tempo-Topaz roll

Last week's Canadian auto output jumped 32.25 percent from the previous week's total as production of the new Tempo and Topaz models got underway at Ford Motor's Oakville assembly point. First-week production of the new models was 970.

Also helping boost last week's total was the return of Ford's St. Thomas facility following downtime for inventory control.

The makers scheduled 25,287 cars last week, up from 19,121 built the prior week, and up 20.15 percent from 21,046 units in the comparable 1982 period.

Year-to-date, the car manufacturers have finished 300,905 units, an 11.07 percent gain over last year's 270,915.

Truck production for the week was targeted at 11,979, a 2.58 percent drop from the previous week's 12,297, and down 8.92 percent from last year's 13,152.

So far this year, there have been 156,766 trucks assembled, down 2.50 percent from 160,786 built in the comparable period last year.

Job One of the Tempo/Topaz line was built last week at Ford's Oakville car assembly point. The facility was idled two months for the changeover from the Ford Crown Victoria previously built there.

Tempo-Topaz production currently is 25 per hour on two shifts. It is scheduled to rise to 60 an hour on two shifts within six to eight weeks.

Also back in production was Ford's St. Thomas car plant following two weeks of downtime due to overstocked inventory. St. Thomas, source of the Ford Escort, EXP, Lynx, and LN7 models, will begin assembly of the 1984 Crown Victoria and Grand Marquis models in December. The two standard-sized cars are currently built at Ford's St. Louis facility which is working overtime to keep up with market demand.

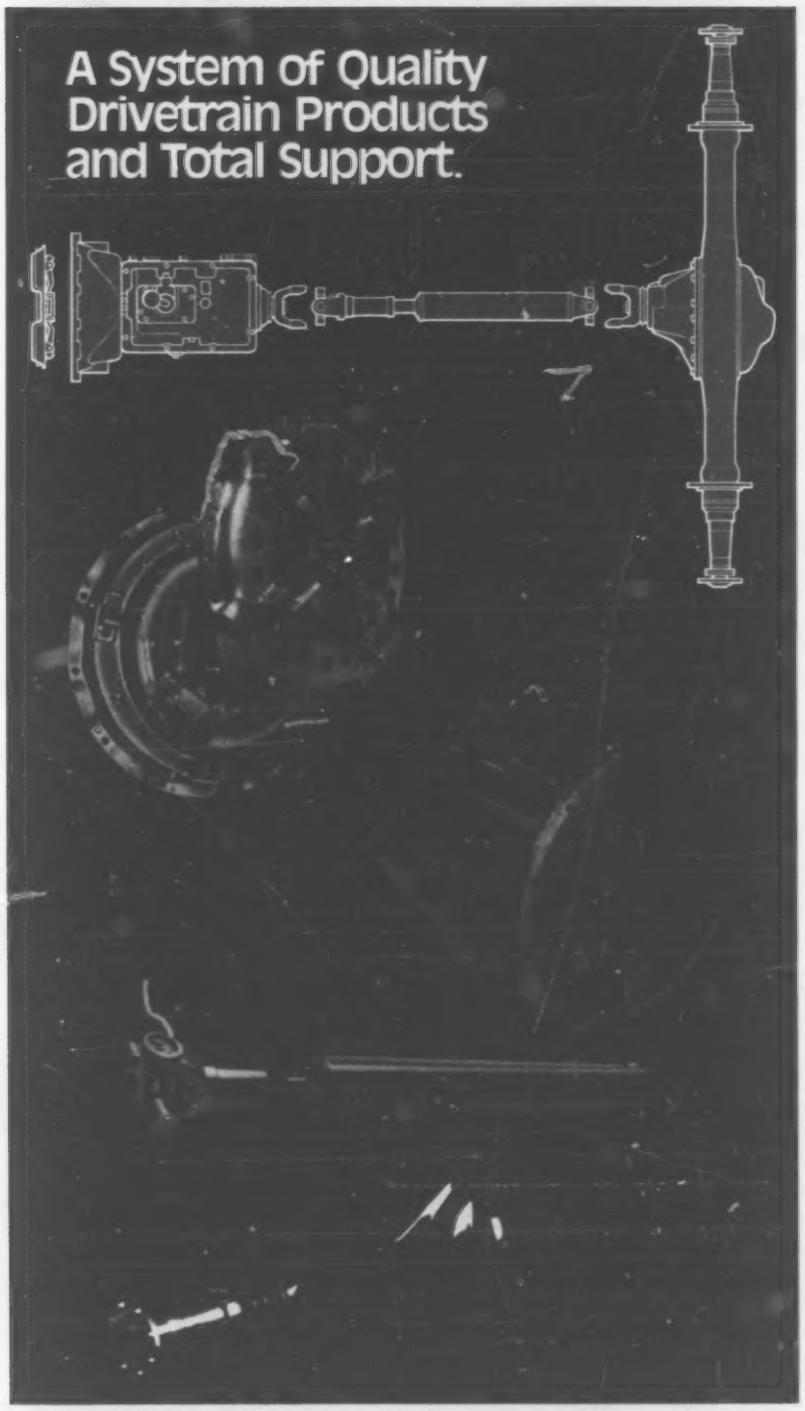
1983 Market Data Book Issue

MEETING YOUR NEEDS.



The Spicer® System is a complete package of medium duty components, specing assistance, technical service, service parts and training.

How the System works:

Drivetrain Components
■ Spicer clutches, transmissions, drivelines and axles are specifically designed to work together to meet the demanding requirements of medium duty service.

Specing Assistance
■ Spicer sales representatives work with all the components, so you need only **one** supplier to assist in specing the complete drivetrain.

Technical Service
■ Spicer service specialists know how each component works and how they work together. You receive fast field service from **one** source.

Service Parts
■ Spicer Regional Service Centers stock replacement parts for all four drivetrain components. **One** OE or dealer phone call results in same-day shipment of emergency parts.

Training
■ Your personnel learn how to service each component and maintain the entire drivetrain from **one** source.

The Spicer System works for you with Value and Performance.

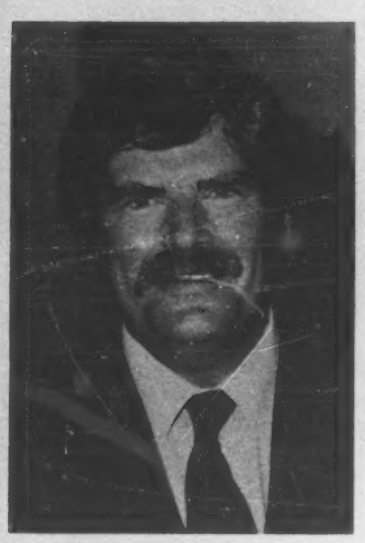
Historic patterns, emerging trends



A lot happened to the automotive business on the way to 1983. It tripped over a staggering U. S. and world economy, and motor vehicle sales in most nations fell again in 1982.

Yet, throughout the past year, the industry continued to make some of the most momentous changes in history in the design, manufacture, marketing and sales of cars, trucks and components.

A lot also happened to the Automotive News Market Data Book on the way to '83. Take a good look. The annual issue has been reorganized and restyled to help readers more easily find and use key statistics, records and information on the past automotive year.

Contents are divided into 10 specific sections. Charts and graphics are easier to read and interpret. The goal is to give you clearer insight into what's what, who's who and why in an industry that is becoming more complex and increasingly global in scope.

Over the years, the Automotive News Market Data Book, by putting a premium on information, has become recognized as the most all-inclusive annual source of motor vehicle facts and figures, used not only by those in the industry, but by government officials, educators, financial institutions and the media. In that role it plays an important part in Automotive News' position as the industry's top communicator.

The Market Data Book is more than a compilation of statistics. Mindful reading and analysis of the data and charts will help define historic patterns and future trends. That's important to those who need to understand the changes the motor vehicle industry—manufacturers, dealers, suppliers—is experiencing.

You will find the 1983 Market Data Book issue to be a valuable and continuing source of information throughout the year.

CONTENTS

PRODUCTION 3
With few exceptions, world vehicle manufacturers suffered production declines in 1982 as a result of a delayed economic recovery.

SALES/REGISTRATIONS 19
U. S. new-car sales dropped in 1982, but imports increased their market share and retail truck sales were the best since 1979.

PRODUCTS/SPECIFICATIONS 41
Pictures, specifications and product information focus on 1983 model domestic cars, trucks and imported vehicles.

PRICES 63
Here are the facts on retail prices of 1983 model vehicles sold in the U. S. by make, body style and market class.

OPTIONS/EQUIPMENT 69
Buyers of new cars in 1982 shifted demand for a number of options and equipment items.

MANUFACTURERS 85
Motor vehicle manufacturers suffered through a period of extremely difficult financial and business conditions in 1982.

DEALERS 97
For franchised new car and truck dealers, 1982 was a year of sales incentives, from rebates to reduced interest-rate programs.

SUPPLIERS 103
Continuing refinement of vehicle designs and use of new materials and manufacturing processes presented a challenge to suppliers in 1982.

DIRECTORIES 111
Who's who in the industry—from top executives and auto company management rosters to automotive associations and buyers' guides.

ETCETERA 199
Check out trends in used car prices, scrappage rates, new-car inventories and auto shipments across the U. S.-Canadian border.

58TH YEAR—NO. 4965
Automotive News (ISSN 0005-1551) is published weekly except semi-weekly fourth week in April at 965 E. Jefferson Ave., Detroit, Michigan 48207. Second-class postage paid at Detroit, Michigan, and at additional mailing offices.

PRODUCTION

U.S. automobile makers wrapped up the 1982 calendar year with production of 5.1 million units, down 18.8 percent from 1981 (6,280,045), and the lowest total since 1958 (4,244,045). U.S. truck makers, however, turned out 1.9 million units in calendar 1982, a 12.2 percent gain over 1981 (1,701,122), and the highest yearly output since 1979 (2,973,498). The world motor industry, with a few exceptions, experienced production declines in 1982 as a result of delayed economic recovery.

SALES/REGISTRATIONS

A continuing economic recession pushed new-car sales in the U.S. in 1982 (7,977,570) 6.4 percent below 1981 (8,531,514), and nearly 3.5 million units below record year 1973 when a total of 11,427,478 domestic and import makes were purchased. Sales of imported new cars continued their fourth straight year of increased penetration by taking a record share (27.8 percent) of the U.S. market. Retail sales of new trucks in 1982 were the highest since 1979.

RV SHIPMENTS

1982**
(Total shipments, 258,000)

Travel trailers	65,500
Truck campers	5,700
Folding camping trailers	34,300
Motor homes	41,200
Multi-use vehicles	111,300

1981**
(Total shipments, 239,100)

Travel trailers	63,800
Truck campers	5,100
Fold-down camping trailers	35,000
Motor homes	35,400
Multi-use vehicles	99,800

1980**
(Total shipments, 181,400)

Travel trailers	51,900
Truck campers	5,000
Fold-down camping trailers	24,500
Motor homes	28,600
Multi-use vehicles	71,400

1979**
(Total shipments, 303,300)

Travel trailers	90,200
Truck campers	13,800
Fold-down camping trailers	31,100
Motor homes	64,100
Multi-use vehicles	104,100

1978**
(Total shipments—526,300)

Travel trailers	159,800
Truck campers	48,200
Fold-down camping trailers	48,200
Motor homes	157,200
Multi-use vehicles	136,400

**—Pickup covers no longer included in RVIA shipments.

1977
(Total shipments—745,900)

Travel trailers	167,900
Truck campers	31,900
Fold-down camping trailers	53,900
Motor homes	280,200
Pickup covers	211,700

1976
(Total shipments—556,300)

Travel Trailers	189,700
Truck Campers	42,000
Camping Trailers	53,300
Motor Homes	156,100
Pickup Covers	215,200

1975
(Total Shipments—562,100)

Travel Trailers	150,600
Truck Campers	44,300
Camping Trailers	48,100
Motor Homes	96,800
Pickup Covers	212,500

1974
(Total Shipments—529,200)

Travel Trailers	126,300
Truck Campers	45,400
Camping Trailers	55,200
Motor Homes*	68,900
Pickup Covers	233,400

1973
(Total Shipments—752,500)

Travel Trailers	212,300
Truck Campers	89,800
Camping Trailers	97,700
Motor Homes*	129,000
Pickup Covers	223,700

1972
(Total Shipments—747,500)

Travel Trailers	250,800
Truck Campers	105,100
Camping Trailers	110,200
Motor Homes*	116,800
Pickup Covers	164,600

1971
(Total Shipments—549,400)

Travel Trailers	190,800
Truck Campers	107,200
Camping Trailers	95,800
Motor Homes	57,200
Pickup Covers	98,400

1970
(Total Shipments—472,000)

Travel Trailers	138,000
Truck Campers	95,900
Camping Trailers	116,100
Motor Homes	30,300
Pickup Covers	91,700

*—Imports of Volkswagen Campmobile Motor Home included in 1972-1974 totals only.

PRODUCTS/SPECIFICATIONS

Car and truck manufacturers continued massive spending programs in 1982 to bring to market new lines of products. A primary aim of the industry was to improve vehicle performance while retaining fuel efficiency and adding value. Although downsizing continued as a general trend, the 1983 model introductions were sparked by new looks, new features and plenty of variety. The result is a 1983 model product line that, segment for segment, is one of the strongest in history.

1982 TOTALS (End of Model Year)	113	150	4	40		(307)

*—Two-door total includes hatchbacks, which some makers list as three-door models.
**—The Automotive News market class designations have been revised for the 1983 model year. For that reason, the final 1982 totals of the individual models in a particular market class in the above listing will not add to the final 1982 total for the class as a whole.

PRICES

U.S. auto makers moved up, down and sideways in arriving at manufacturers' suggested retail prices on 1983 models. When the dust settled, General Motors' introduction prices showed the biggest hike, an increase of $212 or 1.9 percent for its average-equipped new model. Next was American Motors with a boost of $137 or 1.4 percent. Ford Motor Co. stickers rose an average of $39 or 0.4 percent. Chrysler Corp. undercut its U.S. competitors by announcing a $3 decrease on its typically equipped '83 car.

RETAIL PRICES, U. S. 1983 MODELS

This table shows 1983 domestic prices in effect April 1, 1983, and rounded off to the nearest dollar. All prices are Manufacturer's Suggested Retail Prices. They do not include destination charges, state and local taxes, optional equipment or any other charges that may be passed on to the local buyer. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard-equipment radio is a delete option.

Comparison of selected 1983 and 1982 domestic models by market class. Prices are Manufacturer's Suggested Retail Prices. The 1983 prices are those in effect April 1, 1983. The 1982 prices are those in effect at the end of the model year.

No adjustment has been made for year-to-year equipment changes or dealer discount changes or for standard-equipment variations among competing models. If there is no entry in the 1982 column, it means that the 1983 model is new or had no direct counterpart in 1981.

Imported car retail prices

Prices in effect March 15, 1983

The following prices are Manufacturer's Suggested Retail Prices. They include ocean freight and import duty. They do not include inland transportation fees, state or local taxes, optional equipment or special equipment required by state laws. Where East Coast and West Coast prices differ, East Coast prices are used. Prices are for 1983 models unless otherwise indicated.

OPTIONS/EQUIPMENT

Buyers of new cars in the U.S. in 1982 shifted their demand for a number of optional equipment items. Notable was a comeback for V-8 engines as a result of stable fuel prices that stirred interest in full size, luxury and sporty cars. At the same time, sales of diesel-powered passenger cars plummeted 37.6 percent during calendar year 1982, and accounted for only 3.9 percent of new car sales compared to 5.9 percent in 1981. Sales of many options continued to climb.

Note: Figures are generally based on U. S. production. However, some Canadian-only sourced cars, or those where U. S. production does not give an accurate reading of the figures, are included.

Specific models include Chrysler's New Yorker, Gran Fury, Cordoba, Diplomat and Mirada; Ford's standard-sized Ford, EXP and LN7.

Figures are based on production of 5,712,297 U. S. models during the 1982 model year, including 70,896 American Motors cars; 724,548 Chrysler Corp. cars; 1,308,516 Ford Motor cars; 3,506,671 General Motors cars and 102,664 Volkswagen cars.

*—Includes total CB installation.
Note: Figures are generally based on U. S. production. However, some Canadian-only sourced cars, or those where U. S. production does not give an accurate reading of the figures, are included.
Specific models include Chrysler's Gran Fury, Cordoba, New Yorker, Diplomat and Mirada; Ford's standard-sized Ford, EXP, and LN7.
Figures are based on production of 5,712,297 U. S. models during 1982 model year, including 70,898 American Motors cars; 724,548 Chrysler Corp. cars; 1,308,516 Ford Motor cars; 3,505,671 General Motors cars and 102,664 Volkswagen cars.

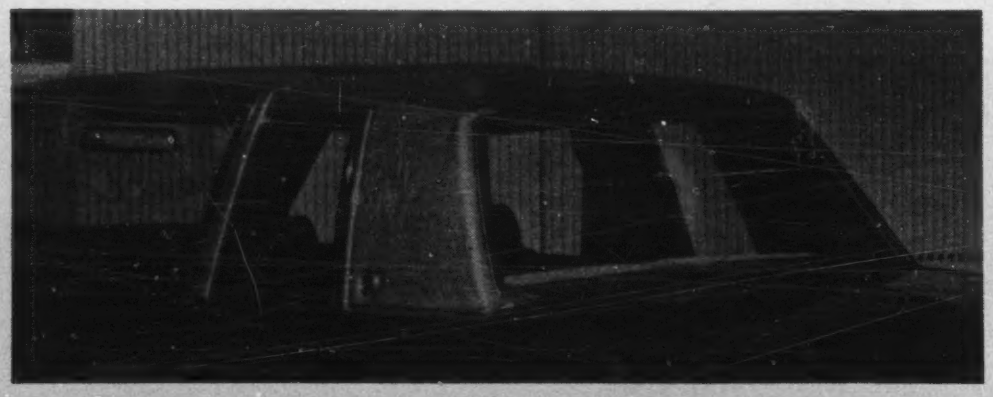
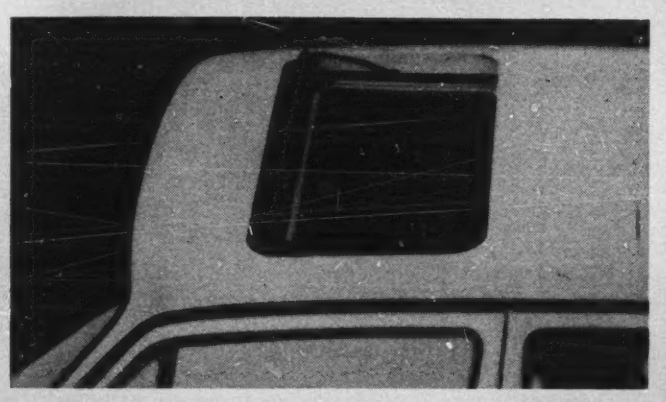
Note: Figures are generally based on U.S. production. However, some Canadian-only sourced cars, or those where U.S. production does not give an accurate reading of the figures, are included.

Specific models include Chrysler's Gran Fury, Cordoba, New Yorker, Diplomat and Mirada; Ford's standard-sized Ford, EXP and LN7.

Figures are based on production of 5,712,297 U.S. models during 1982 model year, including 70,898 American Motors cars; 724,548 Chrysler Corp. cars; 1,308,516 Ford Motor Cars; 3,505,671 General Motors cars and 102,664 Volkswagen cars.





MANUFACTURERS

A continuing profit pinch, caused by a prolonged economic recession that put a cap on new-vehicle demand, continued to plague domestic auto companies in 1982. The book closed on Checker Motors Corp. which shut down its manufacturing operation in July; but it opened on two new name-plates: Assembly of Renault Alliance cars was launched by American Motors, while Honda of America Manufacturing Inc. began producing Accord models in the U.S.

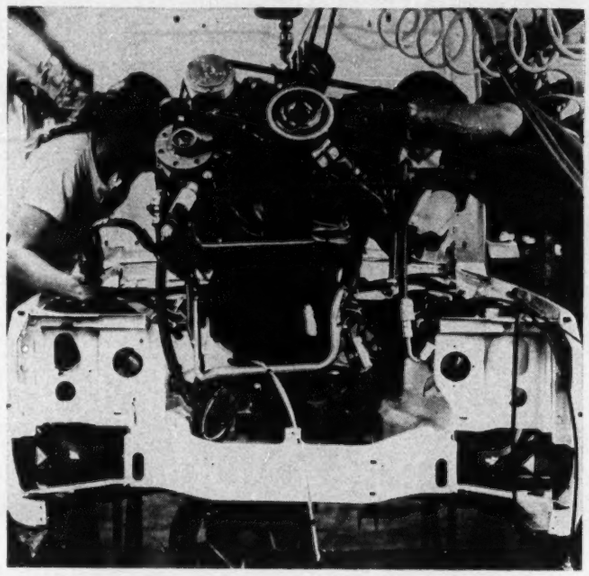
The time that tried the souls of domestic auto makers

The 1982 calendar year probably will be remembered as a year that promised much for U. S. motor vehicle manufacturers, but instead delivered a fourth year of lackluster sales.

The long-awaited sales recovery expected by the domestic motor vehicle industry and predicted by many respected economists didn't materialize during the first half of 1982, and domestic car sales hit a record low at the end of June equal to an annual selling rate of 4.8 million units.

But an upward trend began to signal its presence after midyear. It was painfully slow initially, gaining momentum in October and registering its arrival in the first two selling periods of November.

While there was strong feeling late in 1982 that the domestic motor vehicle industry's long period of depressed sales was slowly fading, there still were factors outside the direct control of vehicle manufacturers that dictated the strength of a recovery.



Because of these factors, which included complex issues impacting the worldwide economy, accurate future sales predictions were risky, at best, and open to constant revision as 1982 drew to a close.

One of the biggest factors was consumer spending attitudes. This spending hesitancy was consistent during 1982 despite the fact that consumers had high levels of personal savings and disposable income.

Record unemployment and concerns about future employment levels kept consumers cautious in their approach to buying throughout the year.

Despite the problems facing the economy and domestic car, truck and bus producers during 1982, there were optimistic signs, among them a new developing spirit of cooperation and the massive rebuilding effort undertaken by the domestic manufacturers.

The new spirit of cooperation, developed between the manufacturers and Washington and between the manufacturers and labor.

Together with the biggest and most complicated peacetime industrial revolution ever undertaken — the total rebuilding of the domestic vehicle industry — the developing spirit of cooperation put the industry and its workers on the cutting edge of the economic recovery.

Also seen in 1982 was a new attitude in Washington toward business, with significant steps being taken to break down the confrontational relationship that has existed for years. Auto makers hoped the effort would remove unnecessary and costly regulatory burdens which hamper manufacturing efforts and increase costs to consumers without providing additional benefits.

U. S. motor vehicle producers continued to invest in the future, despite posting record losses of $4.2 billion in 1980, $1.3 billion in 1981 and a small profit of $321 million in 1982. These performances were in stark contrast to $4.9 billion in after-tax profits reported in 1978, the record sales year that preceded, the auto industry's slide into recession.

In spite of these numbers, U. S. auto makers ended 1982 with a surge of optimism and determination. Domestic manufacturers were geared up with new products and renewed dedication to quality and manufacturing efficiency to capitalize on a market upswing.

There never has been a more drastic turnover in product design, style and function in any industry than in the automobile industry since the mid-'70s and into 1982.

There is no question that 1982 was a time that tried the souls of men and women in Detroit who live and die with 10-day sales reports. But the industry has always viewed problems as opportunities, and the revolutionary changes seen in 1982 were expected to help put domestic car and truck makers back in their accustomed role of world leaders.

Big Four sales total $110 billion in rough year

There is no arguing that 1982 was another rough year for auto makers. Continuing negative economic factors in the U. S. resulted in the worst auto industry sales in 19 years. Consequently, combined dollar sales of the four major U. S. auto companies — General Motors, Ford Motor Co., Chrysler Corp. and American Motors, slipped to $110.0 billion in 1982 from $113.5 billion in 1981.

There was a bright note, however. Although Ford and AMC continued to show financial losses, GM and Chrysler recorded profits, and combined results for the four companies showed a net profit of $321.5 million in 1982 compared to a loss of $1.3 billion in 1981.

Although GM's income from manufacturing operations was in the black, more than a third of the income was registered by accounting credits for currency exchange. If those credits and GM's long-term interest charges for the year are subtracted, the company's only money makers in 1982 were financing and insurance.

Tax credits and cost reductions — including labor reductions — also figured strongly in GM's 1982 net income of $962.7 million ($3.09 a share).

That compares favorably with $333.4 million ($1.07 a share) earned in 1981, but falls far short of GM's pre-recession earnings of $3.51 billion ($12.24 a share) in 1978.

GM's increased earnings in 1982 came despite a sales decrease. Last year's sales of $60.0 billion were down 4.3 percent from $62.6 billion in 1981. It was the third straight year of sales declines and the lowest total since 1977 when GM sales were $54.9 billion.

Worldwide factory sales for GM in 1982 were 6.24 million cars and trucks, down 7.7 percent from 1981, and the lowest since 1976 when GM sold 8.57 million vehicles.

GM manufacturing operations more than doubled their profits in 1982. Operating income rose from $392.1 million to $961.9 million, but interest expenses rose by 57 percent to $1.4 billion.

The $348.4 million realized from foreign exchange activity was 54 percent more than in 1981. Much of it was due to the strong value of the dollar and GM's accounting method: The corporation lost money: ($107 million) overseas, but was entitled to credits because the value of the foreign-currency debt declined compared to the dollar.

GM's European operations in 1982 were profitable for the first time since 1979. Sales of $7.3 billion resulted in net income of $6.2 million.

Latin American sales were up 5.2 percent to $3.0 billion, and the annual loss was reduced from $62.6 million to $16.5 million.

Canadian sales were down 9.9 percent to $7.97 billion. The loss was reduced from $35.6 million (U. S.) to $33.5 million.

U. S. sales also declined—4.6 percent—to $50.32 billion. But income was up 41.4 percent to $1.1 billion. GM lost $63.2 billion in other foreign markets. (The corporate sales total is less than the sum of the geographic totals because the latter includes intercorporate transactions.)

Capital spending by GM during 1982 totaled $6.2 billion, down from the record $9.7 billion spent in 1981.

The corporation spent $2.1 billion for research and development in 1982, down slightly from levels of 1981 and 1980.

GM's shining star in 1982 was GMAC; the finance unit reported an 88.4 percent increase in earnings above its previous record 1981 level. GMAC and its subsidiaries, primarily Motors Insurance Corp., reported net income of $688 million for 1982.

Ford Motor Co. reported a loss of $657.8 million for 1982, its third straight year of heavy losses. During the three-year period Ford lost $3.2 billion.

The 1982 deficit amounted to $5.46 a share, but it was an improvement of $402 million over Ford's $1.0 billion loss in 1981 ($8.81 a share). Dollar sales in 1982 dropped 3 percent to $37.0 billion from $38.2 billion in 1981.

Ford partially attributed the decrease in losses from 1981 to 1982 to continuing reductions in operating costs. The reductions amounted to more than $3 billion since 1979.

In addition to lower costs, Ford said the improvement in 1982 financial results reflected the absence of foreign-currency transaction losses incurred in 1981. This included savings of about $220 million ($1.83 a share) from adoption of a new accounting method.

However, this was offset partially by lower volume and the non-recurrence of a $154 million ($1.28 a share) tax credit in the UK that was included in 1981 results.

Ford's 1982 loss in the U. S. and Canada was $1.2 billion compared with a loss of $1.4 billion in 1981.

Outside the U. S. and Canada, Ford earned $613 million in 1982, an increase of $226 million from 1981. Ford sold 2,038,831 vehicles overseas in 1982—more than any other U. S.-based manufacturer, according to the company.

Worldwide 1982 factory sales of Ford cars, trucks and tractors were 4.3 million units, down 2 percent from sales of 4.4 million in 1981.

In the U. S., unit sales were down 2 percent; in Canada, unit sales were down 25 percent, and outside the U. S. and Canada unit sales were up 1 percent.

• Sale of Chrysler Corp.'s defense unit helped push the 1982 profits of the company into the black for the first time in five years.

Chrysler reported a net profit of $170.1 million ($1.84 a share) for the year. The sale of Chrysler Defense Inc. netted $239 million.

In 1981 Chrysler showed a loss of $475.6 million.

The 1982 profit came on sales of $10.0 billion, up 0.7 percent from $9.9 billion in 1982. Unit sales, however, declined 7.9 percent from 1.28 million in 1981 to 1.18 million in 1982.

Chrysler's continuing operations would have been profitable without a UAW strike at Chrysler Canada, which cost the company an estimated $125 million. As it was, they turned in a before-tax and before-tax-credit loss of $68 million.

But U. S. and Canadian car/truck/parts manufacturing operations were profitable during 1982.

Chrysler cut its breakeven volume to 1.1 million units in 1982 compared with 2.4 million units three years earlier.

Chrysler Financial reported an after-tax gain in 1982 of $5.2 million. Money losers for Chrysler were its company-owned stores (which lost about $11 million) and Mexican operations (which lost $55 million).

U. S. sales increased 10.4 percent to $10.2 billion in 1982 and earnings were $208.5 million. Canadian sales increased 43 percent to $2.9 billion and earnings climbed to $20.2 million from a 1981 loss of $49.3 million. Losses in other countries amounted to $58.6 million.

• American Motors' 1982 net loss was $153.4 million ($2.85 a share). It was the third consecutive year of losses and 12.4 percent worse than 1981's loss of $136.5 million ($2.44 a share). It was, however, lower than the 1980 loss of $200.8 million ($6.10 a share).

Net sales were up 11.5 percent in 1982 to $2.8 billion, the highest since 1979. This was despite an 8 percent decline in unit sales. Major declines in unit sales of foreign operations more than offset a domestic gain.

AMC wholesale auto sales in the U. S. and Canada increased 4.0 percent to 186,957 cars in 1982. The Jeep total climbed 7.0 percent to 67,646 units.

Meanwhile, AMC's international auto total fell 67.2 percent to 8,834 cars, and the Jeep total fell 44.3 percent to 23,083 units.

1982-1981 Financial Results

	Net Sales		Net Profit/Loss*		Profit/Loss Per Share	
	1982	1981	1982	1981	1982	1981

DEALERS

For franchised new car and truck dealers in the U.S., 1982 was a year of sales incentives, from manufacturer rebates to special reduced interest-rate programs by the factories. Despite the consumer incentives, dealers generally saw much the same in 1982 as in the preceding three years: Declining new-car sales and a financial squeeze caused by a staggering national economy. Dealer attrition remained high in 1982, although the rate of dealership closings was lower than in 1981.

SUPPLIERS

Like motor vehicle manufacturers, original equipment suppliers of automotive components and materials suffered through a period of extremely difficult business conditions in 1982. Manufacturers' continuing refinement of vehicle designs, improved quality programs and use of new materials and manufacturing processes presented an on-going challenge throughout the year. The changing mix of materials in new vehicles and price pressures intensified competition among suppliers.

BEST AVAILABLE COPY

Gloomy 1982, uncertain '83

OE suppliers face tough challenges

Like motor vehicle manufacturers, automotive original equipment suppliers suffered dismal financial fortunes in 1982 as a result of depressed new car and truck sales.

But also like their auto making customers, suppliers saw hope for improvement in the overall economic picture as 1983 got under way, although the consensus did not indicate expectations of a return to high-volume vehicle sales of the 1970s.

Despite a gloomy 1982 and an uncertain immediate future, suppliers generally believe long-term prospects for the automotive business are attractive.

"The American auto industry is having maturity pains, but it's going to remain a big business and big market for a long time," said C. E. Johnson, vice president - transportation, Borg-Warner Corp. "Marginal components suppliers are in trouble, and many will go under during 1983 and beyond. But suppliers of technology that matches the needs of the market place, rather than those simply bending metal on a lowest-cost basis, will survive the shakeout."

Chester Devenow, chairman, Sheller-Globe Corp., said that even though markets for new cars and trucks may remain depressed in 1983, the performance of suppliers and vehicle manufacturers should improve because of reductions in break-even points brought about by cost - reduction programs, improved productivity, restructured organizations and better management of human and manufacturing resources.

One of the toughest challenges facing suppliers is having to manufacture products of consistently higher quality while reducing manufacturing costs.

James K. Ashford, president, Tenneco Automotive, said quality has become a driving force throughout the auto industry in response to consumer demand and a perception by consumers that foreign vehicles are of higher quality than those produced domestically. Noting that the response by U.S. vehicle manufacturers has improved the quality of domestic vehicles and made greater demands on suppliers, Ashford said, "As a result, all parts of the system now place heavier emphasis on statistical methods of quality control."

Ashford said continuing refinement of vehicle designs and implementation of new ones has impacted suppliers by increasing the complexity of their design and development tasks. Other challenges facing auto suppliers, he said, include keeping production costs down and increased utilization of new materials, processes and technology in programs to reduce vehicle weight.

He said competition between suppliers is likely to intensify because overall vehicle production is not likely to increase significantly. "That competition is likely to stress quality, cost and ability to deliver on time; I expect to see more 'just in time' inventory programs to help minimize costs," the Tenneco Automotive president said.

Auto stampings climb in '82

Industry trend to buying rather than making

Automotive contract stampings increased to an estimated $11.8 billion in 1982 over 1981, up 14 percent in dollar volume of shipments.

Total contract stampings, automotive and nonautomotive, climbed to an estimated $26.9 billion in 1982 from $23.4 billion in 1981 for an increase of 15 percent.

The historical patterns shown in the accompanying charts are based upon contract stamping shipments as reported by the U.S. Bureau of Census. Shipments are actual figures through 1979 while amounts of 1980 and 1981 are estimated. The estimates are subject to revision when governmental survey data are available for these later years. Non-automotive stampings include: Metal stampings nec (SIC 3469); crowns and closures (SIC 3466) and other fabricated metal products (SIC 34994).

On a longer term basis, the market should improve because of a perceived fundamental change in American industry, according to the American Metal Stamping Assn. (AMSA.), because more and more large American industries are opting for "buying rather than making." Pressures on prices, profits and cash are forcing companies to carefully evaluate the relative competitiveness of in-house manufacturing facilities, said AMSA, and a significant trend is emerging in which stamping and component assembly operations increasingly are being subcontracted at lower than in-house costs. As another dimension of this trend, companies are also opting to subcontract component production for new products, rather than make capital investments in machines and tooling required for in-house manufacture.

Aftermarket still growing

Japanese forge steadily forward in U.S.

The four "I's" affecting the auto industry adversely in the past—interest rates, inventories, imports and inflation—will be lined up more favorably in 1983, according to William A. Raftery, president of the Motor & Equipment Manufacturers Assn. (MEMA).

The result, he predicts, will be a better year for the entire industry from production to consumption.

"The lid will remain on inflation," feels Raftery. "That's a gain well-established in 1982 and not likely to be sacrificed by Congress at this stage of recovery. And the Japanese are continuing their voluntary ceiling on vehicle shipments to the U.S. market — also a plus already established."

The big improvement, he forecasts, will be "the favorable impact of continued lower interest rates on new car sales, and on inventory levels in the aftermarket as consumer demand strengthens.

"I'm not convinced interest rates will get down to the single-digit level," says Raftery. "But even if they do, and even if U. S. vehicle makers market successfully, we still won't see a return to the swinging sales levels the industry once enjoyed —not for several years."

Light truck sales had already turned upward in '82, points out Raftery. Heavy truck sales will follow in '83, he believes, "but not until consumer spending has started to move the entire economy upward—not before the end of the second quarter in '83."

The aftermarket will pick up considerably in '83, he predicts. "The average age of both cars and trucks has continued to climb in recent years, and total miles driven by this aging fleet has recovered modestly in the past two years from the severe declines of '79 and '80.

"MEMA tracks the accumulated mileage per vehicle," says Raftery, "and the maintenance and repair requirements that have been building up cannot be deferred much longer and should be increasing attention as consumer confidence in the recovery increases."

The heavy-duty aftermarket should pick up earlier than the new truck market, he foresees, because the momentum needed in the economy to stimulate effective operation of the existing fleet is not as great as will be needed to justify investment in new heavy trucks.

Stepped-up demand in both car and truck aftermarkets will give everyone in the distribution channels the incentive to use the inventory-increasing ability provided by lower interest rates. "But levels won't get back to what we used to consider normal," says Raftery, "for more than one reason.

"There may be a lot of watchful waiting," he explains, "before the aftermarket is convinced that demand is strong and sustaining enough to justify higher inventories.

"Moreover," he says, "the OE suppliers are operating in an atmosphere in which their vehicle-making customers are comparing their production efficiency with the Japanese just-in-time system, stressing elimination of inventories.

"This puts the supplier in the position of having to carry a certain amount of OE customer inventory in addition to requirements of the aftermarket, yet under the same gun as the customers to keep inventory costs down. We could become too lean for our own good if demand starts accelerating."

For 1983, Raftery thinks aftermarket demand for parts, in units, could reach a level of 10 percent above the 1982 levels on an overall basis. Various lines, however, will be affected to greater or lesser degrees.

"Some lines showed strength throughout '82," he says, "while others will need more than a 10 percent improvement to regain their previous growth curves."

The Japanese, meanwhile, have been forging steadily forward in the U. S. aftermarket. Notes Raftery: "The annual U. S. deficit in automotive and truck components trade, with Japan, was already $700 million in 1975. The elements included in the figures have changed somewhat, since then, but if you use the same elements today you find the deficit exceeded $4 billion in '82."

He points out that the swelling number of Japanese vehicles on U. S. highways also has been aging and accumulating maintenance and repair requirements, traditionally served mostly through franchised Japanese auto dealerships with Japanese parts.

"This growth, nevertheless," says Raftery, "is now an integral part of the U. S. aftermarket, and individual companies will exercise varying degrees of initiative in going after it."

U. S. Automotive Industry Use of Reinforced Plastics

The recession caught up with the Reinforced Plastic Composites industry in 1982, reducing total shipments 17 percent to an estimated 1.52 billion pounds. Land transportation use of the materials—primarily in cars and trucks — declined 20 percent to 359 million pounds.

However, the industry forecasts an 8.4-percent increase in total shipments in 1983 to a volume of 1.65 billion pounds, and an increase of 11 percent to 402 million pounds in land transportation use.

The increase in reinforced plastics shipments in 1983 forecast by the industry (Table Below) is predicated on resumption of growth in the economy.

Cal. Year	Pounds
1970	167,000,000
1971	195,000,000
1972	250,000,000
1973	307,000,000

Steel—the basic ingredient

1,700 pounds in typical U.S.-made '82 car

Steel continues to be the basic material of the automotive industry, maintaining its 60 percent share of the automobile's weight. The 1,700 pounds of steel in the typical 1982 U. S.-built car represented more than all other materials in the car combined. And steel has maintained its edge over the years. In 1922 the Model T Ford was 50 percent steel.

That does not mean automotive engineers and designers have been using this traditional material in traditional ways. Much to the contrary, the automotive engineer uses today's high-strength and coated steels in innovative ways to meet the challenges of weight reduction and greater durability.

Today high-strength steel (HSS), with yield strength of 35 ksi or higher, is the fastest growing category for material replacement in American automobiles. Increasingly coated steels such as one- and two-side galvanized sheet steels are being used to combat corrosion.

The U. S. steel industry shipped a total of 87 million tons of steel in 1981, according to American Iron and Steel Institute statistics. Of that 15.1 percent was shipped to the automotive market.

At present 30 percent of the sheet steel shipped to the auto industry is either high-strength or coated. In 1970 only 10 percent of the steel was shipped in those grades. It is expected that by 1990 this portion will increase to 40 percent.

The HSS grades are 20 to 400 percent stronger than ordinary carbon sheet steel so that they can be used to produce thinner, lighter components which comfortably meet or exceed performance requirements.

HSS is being used in wheels for the Chevy Camaro and Pontiac Firebird, American Motors' Renault Alliance and '83 Ford Ranger pickup trucks. Expanded usage of high-strength also can be found in bumper systems, control arms, door beams, frame rails, seat backs and suspension system cross members.

The new Ranger wheels use HSS steel in both rims and the spider, an industry first. An advanced light truck, on the drawing boards, reportedly could use up to 700 pounds of HSS, comprising about 50 percent of the weight of the body-in-white and 20 percent of the vehicle dry weight.

At least two domestic steel companies are modernizing facilities with the installation of continuous annealing (CA) lines which should facilitate the economic production of HSS. The CA lines also will be able to produce bake-hardenable steels which have good formability and the advantage of undergoing strengthening during the paint bake cycle. The yield strength of the steels increase by about 25 percent by the paint oven exposure. These bake-hardenable steels can be beneficial for outer panel use since the high yield strength may allow 10 percent reduction in gage (weight) with no loss in dent resistance. Major utilization of the steels in future vehicles seem probable.

While the American auto industry has led in use of HSS steels, the Japanese lately have mounted an aggressive effort for its use in Japanese vehicles.

• Ten times more salt is used on today's U. S. and Canadian roads as compared to 1955. Due to the increased use of these corrosion causing chemicals, greater attention his focused on corrosion resistance of vehicles. Today a broad range of coated steels is available including galvanized one- and two-side; differentially coated galvanized; aluminum - coated; aluminum-zinc coated, long terne; tin coated and Zincrometal.

Increasingly, the automakers are turning from mild carbon sheet steels to coated varieties for exposed body panels that require corrosion protection. The 1983 Renault Alliance uses galvanized steels in all exterior panels, including roof. Chrysler's Omni and Horizon models use one-side galvanized steel for the outer door panels and quarter panels.

In the unitized body construction that dominates current production vehicles, extensive use of one- and two-side galvanized steels is made in structural components. General Motors' F-car, for example, has upper and lower front rails and body rear rails that use two-side galvanized steel. Exhaust systems are another typical application for the coated steel types.

An application related to safety is front and rear bumpers. Soft fascia bumper designs on Chrysler K-cars and GM J-cars are backed by ultra high-strength steel reinforcement beams. K-cars use 0.062 inch steel with 120 ksi minimum yield strength. A hot dipped G90 galvanized coating provides corrosion resistance. The J-car bumpers use 0.035 inch ultra high strength steel of 190 ksi minimum tensile strength that is roll-formed into shape. A weight savings is realized and the safety requirement is met.

• Chrysler led domestic auto makers in use of zinc-coated steel in 1982 with an estimated average of 291 pounds per car, according to a survey by the Zinc Institute (ZI).

GM averaged 283 pounds per car, Ford, 249 pounds and AMC 236 pounds. Estimates, based on data supplied to ZI by the car makers for 1982 product lines, include one-side galvanized steel, two-side galvanized steel and zincrometal.

Dale C. Nevison, ZI vice president-field operations, says Chrysler's offering of a five-year no-rust-through guarantee on its cars "might be the basis behind its industry-leading use of zinc coatings."

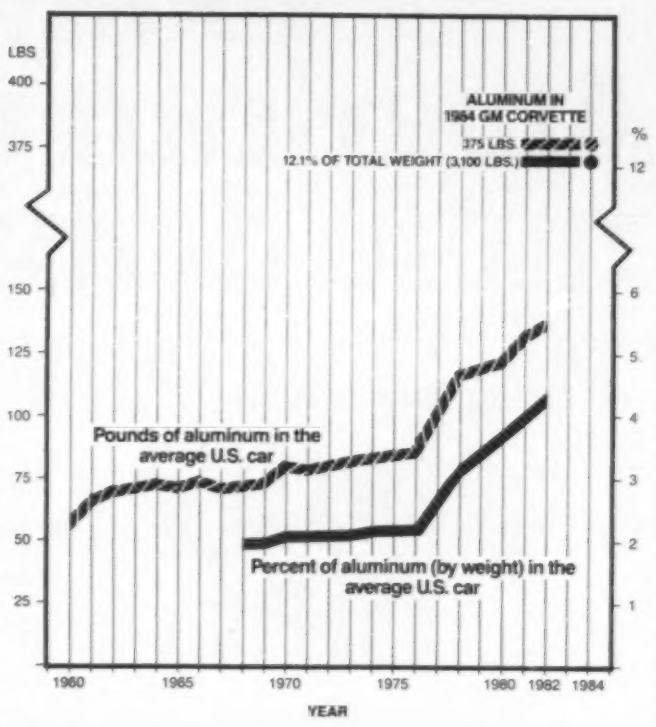
On an industry basis, the survey shows the typical 1982 model utilized 53 pounds of one-side galvanized steel, 115 pounds of two-side galvanized and 106 pounds of zincrometal. In addition each vehicle contains approximately 1.5 pounds of zinc dust used in zinc-rich paints.

The average 1982 U. S. car used 6.8 pounds of zinc as a coating material, according to the survey. That excludes such other automotive uses of zinc such as die castings and zinc oxide in plastic and rubber parts.

On the basis of size, the average small car contains 253 pounds of zinc-coated product, an intermediate model 291 pounds and standard-size cars 310 pounds.

The ZI survey reportedly represents the first time any group has attempted to pinpoint the use of zinc-coated steel.

Trends in the Estimated Use of Aluminum in U.S. Passenger Automobiles



Aluminum—133 pounds

Industry aims for 135 pounds in '83 models

U. S. auto companies used an average of 133 pounds of aluminum per car in the 1982 model year, according to aluminum industry sources. Preliminary estimates were the figure would climb to 135 pounds in the 1983 model year.

The percentage of aluminum climbed to 4.4 percent of a typical car's total weight in '82, up slightly from 1981 and more than double 1976 (2.1 percent).

The 1984 Chevrolet Corvette, introduced in spring 1983, is aluminum's latest success story. It has more than 80 aluminum components that weigh a total of 375 pounds or 12.1 percent of the car's total weight of 3,100 pounds.

More aluminum is used in the new sports car than any automobile in the past. Upper and lower control arms and knuckles are made from aluminum forgings for the front and rear suspension. The lateral control support arm in the rear suspension is forged aluminum. It's the first time these major automobile components have been made from aluminum. Use of the metal in the parts saves approximately 75 pounds.

In the engine compartment, brackets holding the alternator, power steering elements and air conditioning compressor are diecast aluminum.

For the first time ever an automobile prop shaft and its yokes are made from forged aluminum that is welded together. Even the lifting bracket for the engine is made from aluminum.

The brake rotor splash shield is aluminum. Brake calipers are a combination of iron and cast aluminum. The brake master cylinder is also aluminum.

In a unique design approach the new Corvette uses a U-shaped, stamped aluminum channel-beam to connect the rear of the transmission housing with the differential. The prop shaft runs inside the channel beam.

The heat stove tube, used to heat intake air, is made from bright aluminum tubing, mostly for appearance. The torque convertor housing is stamped aluminum sheet. The radiator has aluminum fins.

Ford Motor Co.'s 1983 Ford Tempo and Lincoln-Mercury Topaz boast an industry first: A cast aluminum oil pan, ribbed for rigidity to improve driveline smoothness. Aluminum also is used in the radiator for various applications.

A lot of work is going on with aluminum in experimental cars. One is the BL ECV3, an experimental energy conservation vehicle built with an aluminum structure and plastic body panels. The aluminum structural frame is a conventional monocoque type and includes the roof to which the plastic body panels are attached.

Estimated amount of aluminum in U. S. passenger automobiles

Powder metal operations at half capacity

Powder metallurgy (PM) industry executives agree that the economic outlook at the end of 1982 was uncertain and gloomy.

R. William Rosenquest, president of the Metal Powder Producers Assn. (MPPA), says the metal powder industry last year operated at 55 to 60 percent of capacity. Some companies did well, but only in specialized areas. Customer inventories were low or non-existent. The business outlook in early 1983 was not much better.

Robert C. Burgess, president of the Powder Metallurgy Parts Assn. (PMPA), said a 1982 survey of PMPA members, showed 74 percent of the respondents reporting shipments and backlogs down from 1981. Fifty-five percent said tool orders were up and 45 percent said they were the same or down.

The fabricators were almost split down the middle about the future. A little over 50 percent felt business would be up for 1983 and 48 percent said it would remain the same or down.

Leonard Confer, president of the Powder Metallurgy Equipment Assn., also reflected the current uncertainty in the industry. PMEA members queried by him said they operated at 64 percent of capacity in 1982, compared with 79 percent in 1981 and 88 percent in 1980. But equipment makers see an improving 1983.

Replacement belt and hose sales keep on climbing

With U. S. motorists owning their cars longer than ever, predictions are that retail sales of replacement belts and hose will reach an all-time high in 1983 of more than $870 million.

Paul J. Foley, Goodyear manager of automotive replacement products, said unit sales of V-belts and hose will increase from 5 to 7 percent this year after gains the past two years of 7 and 6 percent, respectively.

"Import cars that earned a significant market share in the late 1970s and early 1980s are now coming into their replacement parts age and will boost aftermarket belts and hose sales," Foley said.

Another factor cited by Foley is the aging of cars and trucks on the road. "The average age of a car should surpass seven years in 1983 while the average truck age is expected to be 7.4 years," Foley said. Nearly 2 percent more vehicles will be on the nation's highways next year, he said.

Fuel prices should remain stable and, consequently, the average car is likely to travel 3.6 percent more miles in 1983 or about 9,600 miles, according to Foley. Annual miles driven by all types of vehicles will rise more than 1.5 percent.

"Belts and hose continue to be purchased primarily on an emergency basis," Foley said. "A belt or hose failure disables a vehicle and its repair can't be delayed." This has helped belts and hose sales top the automotive replacement market average growth rate of 2 to 3 percent, he said.

SUPPLIERS

Die casting sales decline 15 percent

Trends include shift from captive to custom plants

U. S. die casting industry sales declined to $5 billion in 1982—a 15 percent decrease — according to the American Die Casting Institute (ADCI).

ADCI said zinc custom die casting output declined 19.5 percent to 165,000 tons in 1982, with dollar sales down 15 percent. Aluminum custom castings were down 6 percent to 240,000 tons, with dollar sales declining 10.8 percent. Magnesium custom die castings (produced in much smaller quantities) declined 6 percent in pounds but rose 3 percent in dollars.

All categories reflected worsening business conditions and lower die casting sales in 1982.

While the recession was costly, it has made die casting more efficient, according to ADCI President Peter A. R. Findlay. Expenses have been controlled, markets expanded, modern technology implemented and productivity increased, he said, adding, "Die casting is now lean, tightly honed and poised, ready to move forward to meet customer needs."

Viewing 1982 industry developments, Findlay highlighted the new ZA high aluminum-zinc alloys. Use of these cold chamber alloys is increasing significantly, and ADCI sees great promise for marketing this new die casting material.

For 1983, ADCI sees a "slow but steady improvement in sales," with production gains tied to expansion in the primary automotive, appliance and housing end-markets.

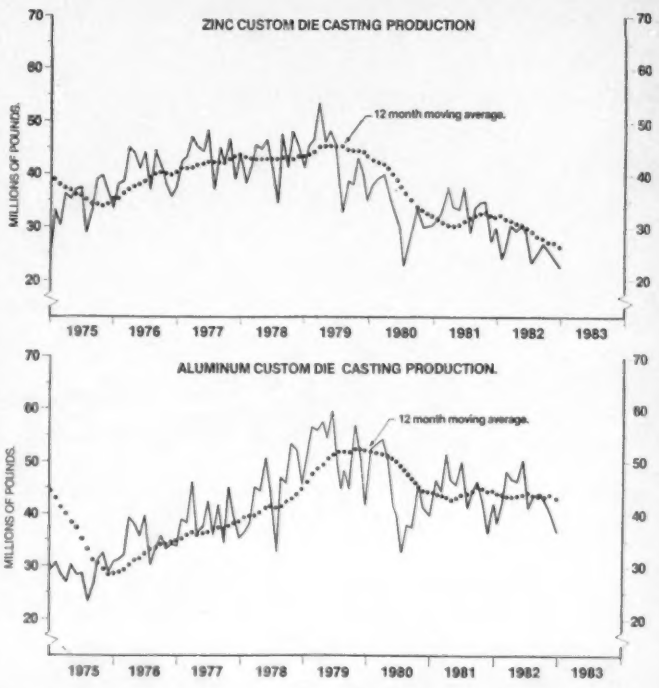
Structural changes include a shift from captive (large-company-owned die casting operations) to custom (independent die casting) plants. Because privately owned companies seem more efficient, several conglomerates and other large organizations began to close-down or sell captive units in favor of custom purchase, Findlay said.

Sales of new tools are increasing, notwithstanding the present economy. This indicates corporate commitments to tool-up for new orders. When a recovery occurs, ensuing production will therefore be rapid, he predicted.

Findlay said markets are being diversified to lessen reliance on automotive industry customers. Die casters have been able to control labor, energy and metals costs, via internal efforts and economic forces. But costs are expected to increase steadily with a future business recovery, he predicted.

Findlay cautioned die casters to consider the problems of metals suppliers in today's recession. Long-term relationships and ability to receive supplies when markets improve are more important than hard-bargained price reductions, he said.

Another manufacturing trend is toward the Japanese "just-in-time" inventory delivery system. Automotive die casting customers are exploring this and contemplating its potential in light of America's longer supply lines and winter weather conditions.



Gradual recovery for tires

More OE sales to car and truck makers

The tire and rubber industry began a gradual economic recovery in 1982.

Donald G. Brotzman, president of the Rubber Manufacturers Assn., said, "Our statistical experts believe the worst is over, the recession has bottomed out, and that our industry has begun a slow recovery along with the automobile industry and business in general.

"We expect this gradual improvement to continue. We are not out of the woods yet, but at least we are headed in the right direction."

Brotzman based his guardedly optimistic forecast on three industry statistical reports by the RMA, covering tires, industrial products such as hose and belting, and mechanical rubber products such as molded, extruded and lathe cut goods.

"Our statistical committees predict slow but steady improvement over the next few years in all the main segments of our industry," Brotzman says.

The tire forecast shows U. S. demand for passenger tires growing from a total of 164.5 million units in 1982 to 172.5 million in 1983 and 181.3 million in 1984. Truck and bus tires are seen rising from 33.5 million, to 36.2 million in 1983 and 38.3 million in 1984.

The industrial products forecast, stated in dollar value instead of units, shows U. S. demand for hose growing from $845 million in 1982 to $870 million in 1983 and $915 million in 1984. The demand for flat belting is expected to grow from $335 million in 1982 to $345 million in 1983 and $360 million in 1984. The demand for V-belts is seen rising from $400 million in 1982 to $415 million in 1983 and $435 million in 1984.

The mechanical rubber products forecast, also in dollar value, shows U. S. demand for molded goods growing from $1.286 billion in 1982 to $1.429 billion in 1983. Demand for extruded goods is seen growing from $309 million in 1982 to $337 million in 1983. Demand for lathe-cut goods is seen rising from $54 million in 1982 to $59 million in 1983.

Auto industry estimates for 1983 indicate the market for original equipment auto tires will rise 10 percent, or 3.4 million tires, to 37.5 million tires,

A 1983 increase is forecast for original equipment truck tires to 4.9 million, compared with 4.4 million tires in 1982. The apparent low ratio of tires to trucks results from the fact that many light trucks are equipped with auto tires.

In the truck tire replacement market, demand should increase 3.2 percent to 28.9 million tires from 28 million a year ago.

Demand for radial-ply tires in the truck-tire replacement market should increase in 1983. Half the replacement tires for medium and heavy trucks will be of radial construction. In 1982, 45 percent of the replacement-truck tires shipped were radials.

• The Rubber Manufacturers Assn. for 1982 reported isolated examples of important growth in tire imports — in particular sizes, for example—but numbers overall are not big.

The table at right shows statistics for the past few years, according to RMA.

Forecast: Molded, Extruded and Lathe Cut Mechanical Rubber Products

	1982	1983
Total molded goods	$1,286,000,000	$1,429,000,000
Total extruded goods	309,000,000	337,000,000
Total lathe cut goods	54,000,000	59,000,000
GRAND TOTAL	$1,649,000,000	$1,825,000,000

Note: Forecast compiled by RMA Molded & Extruded Products Division Statistical Committee. Totals shown for each product represent U. S. demand. This includes domestic shipments less exports, plus imports. Figures based on 1981 dollars.

U. S. Tire Market

	1982	1983	1984
PASSENGER TIRES			
Shipments—Original Equipment	35.5	42.5	50.3
Replacement	129.0	130.0	131.0
TRUCK & BUS TIRES			
Shipments—Original Equipment	5.6	6.5	7.1
Replacement	27.9	29.7	31.2
TRACTOR-IMPLEMENT TIRES			
Shipments—Original Equipment	1.1	1.4	1.7
Replacement	2.1	2.5	2.8

Note: Forecast compiled by RMA Tire Statistical Committee. Total for each product shows U. S. demand including shipments and imports. All figures are in millions of units.

Forecast: Industrial Products

	1982	1983	1984	1985	1986	1987
Hose	$845	$870	$915	$955	$990	$1,025
Flat Belting	$335	$345	$360	$370	$380	$ 390
V-Belts	$400	$415	$435	$450	$465	$ 475

Note: Forecast compiled by RMA Industrial Products Division Statistical Committee. Totals shown for each product (in millions of 1982 dollars) represent U. S. demand. This includes domestic shipments less exports, plus imports. Hose products are reinforced hose, rubber or plastic except garden hose. Flat belting is all conveyor, elevator and flat transmission belting of rubber or plastic. V-belts are all power transmission belts including industrial and automotive other than flat, of rubber or plastic, including belts made for original equipment and replacement.

Machine tool orders almost down by half

The American machine tool industry closed its books for 1982 with orders off almost 50 percent from 1981.

According to the National Machine Tool Builders' Assn., total net new orders of metal-cutting and metal-forming tools decreased 49 percent for the 12-month period ending December 31. Orders for the years were the lowest since 1975, reaching $1,498,550,000 compared to $2,944,850,000 in 1981.

Industry shipments were off 29 percent at $3,607,200,000, marking the first decrease in shipments in six years.

"It's a very alarming situation," commented NMTBA President James A. Gray. "Our industry is being squeezed by a massive and unabated foreign intrusion on one side and a stagnant domestic economy on the other."

Gray pointed to the industry's drastic reduction in order backlog as another discouraging sign. "These extremely low backlog levels are bound to have a negative impact on 1983 shipments," Gray said.

Imports of Passenger Car Tires

Year	Tires	Pct. of Market
1982	16,900,000	10.4
1981	17,500,000	10.9
1980	13,700,000	8.7
1979	15,200,000	8.2

Imports of Truck and Bus Tires

Year	Tires	Pct. of Market
1982	3,700,000	11.7
1981	3,900,000	11.8
1980	4,300,000	13.0
1979	4,800,000	11.4

White was most popular paint color in 1982

White was 1982's most popular car-paint color—displacing light blue, the 1981 leader—but dark grey posted the largest increase, according to DuPont Co.

Based on production figures from leading domestic-car makers, the report covers two general classifications — full-sized/intermediates and compacts.

White accounted for 11.3 percent of the larger models, up from 10.6 percent. Dark blue moved from fourth to second with 10.9 percent, up 2.3 percentage points from last year, while the new dark red-brown and dark-grey took over third and fourth, with 9.8 percent and 9.4 percent, respectively.

Light blue-green gained 1.2 percentage points, to appear on 8.9 percent of the bigger cars. But it still slipped a notch to fifth. Light blue was off 1.6 percentage points, at 8.5 percent, dropping from second to sixth among the bigger cars.

Silver and white — two-three for compacts in 1981 — both gained a percentage point to tie for first with 12.6 percent. Light blue—the '81 compact-car leader—fell a half point to rank third at 12.1 percent.

Dark grey, which scored impressively among the larger cars, leaped 7.8 percentage points, to move from 15th to fourth place, with 9.1 percent of the compact market. Dark blue was off a fraction at 8.8 percent, slipping from fourth to fifth. Red jumped almost four points on the compact-car list, moving from ninth to sixth place, with 8.6 percent of the market.

*—Adjusted to reflect transfer of 1,310,918 passenger vans to truck total.

(1)—Each year many trucks are issued passenger car license plates due to their intended usage or local state laws. Beginning in 1966 VIN prefixes were utilized to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.

(2)—Each year vehicles registered in one state to an address in a different state have been excluded from the count of vehicles in operation. Beginning in 1971 approximately 181,000 passenger cars registered to fleets at out-of-state addresses have been included.

Adjustments for the absence of Oklahoma and other states have been made where applicable.

Charleston, South Carolina	7.79	8.45
Miami, Florida	7.04	7.50

Footnotes:

1. Above costs are based on representative model 1982 Ford, Chevrolet, Plymouth compact cars, 6 cylinder engines, 4 doors, equipped with standard accessories, radio, automatic transmission, power steering and power disc brakes.
2. Fixed costs include depreciation, based on a 4-year trade-in cycle or 60,000 miles, whichever comes first, individual state license fees and taxes, individual state sales and user taxes, financing costs and insurance premiums based on a commutation category, where the vehicle is driven less than 10 miles to or from work and there is no youthful operator; $100 deductible comprehensive, $250 deductible collision, $100/300M bodily injury and $50M property damage.
3. The running costs include the cost of fuel (no-lead regular), oil, normal preventive maintenance, repair costs, washing, lubrication and tires.
4. If the mileage exceeds 15,000 per year, add a further depreciation allowance of 4.2c per mile.

Dealers stand to lose bundle in Shay deal

By Kathleen Hamilton
Financial Editor

Shay Motors Corp., a replicar maker that went out of business last year owing dealers millions of dollars, is being liquidated. Most of its assets are being purchased by another replicar maker, Camelot Motors, in a $2.4 million deal.

It is unlikely that dealers who paid licensing fees and deposits to Shay will recover anything, according to Lloyd Kellum, bankruptcy trustee in the case.

There is $3.0 million worth of Shay debt that has priority, $2.9 million of that due First Wisconsin Financial Corp., a subsidiary of First Wisconsin National Bank of Milwaukee. Another $3 million to $4 million in unsecured debt is outstanding, and most of that is debt to dealers, Kellum said.

First Wisconsin has worked out an agreement with Paul Housey, Camelot owner, that gives Housey $600,000 worth of Shay assets until Aug. 1. Housey said he is producing cars at a leased plant in Marshall, Mich., some 12 miles from where Shay used to build cars in Battle Creek, Mich.

• On Aug. 1, if Housey meets production and sales goals and other terms of the agreement, the deal will close and First Wisconsin will become Camelot's backer. A spokesman for First Wisconsin said that perhaps $1.0 million to $1.5 million would be due at that time, from the sale of vehicles and inventory.

Still up for sale is the Battle Creek plant from which Shay Motors (earlier called Model A & Model T Motor Car Reproduction Corp.) produced Pinto-based, fiberglass-bodied replicas of the Ford Model A and 1955 Thunderbird.

Harry J. Shay, president of the firm named after him, made several unsuccessful challenges to the way the assets of his former replicar firm are being handled.

Shay put the company into Chapter 11 — reorganization — in March, 1982. In July, he changed that to Chapter 7 — liquidation.

Housey had worked for Shay's Model A & T Corp. in an engineering capacity for a few months during the firm's formative period in 1979. Shay was setting the stage at that time for other imitators who set up shop in the quickie-replicar business with very little capital and who financed their startup

Made in Ohio

Honda 'officially' opens Marysville plant

Although Honda's Marysville (O.) assembly plant has been open and building cars since last November, the company picked last week for its formal dedication ceremony. Honda "associates"—as workers are called—are shown putting finishing touches on four-door Accords at the end of the half-mile-long line. Story on Page 3.

Ford Motor charges anti-trust laws bar GM-Toyota venture

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Ford Motor Co. last week presented its objections to the proposed General Motors-Toyota car-assembly venture, charging that "from a legal standpoint, it would constitute a clear violation of the U. S. antitrust laws."

Ford's position was detailed by David N. McCammon, vice president, corporate strategy and analysis. In testimony before the House Subcommittee on Commerce, Transportation and Tourism, he urged the FTC to move promptly to prevent the joint venture.

Also last week, Chrysler Corp. distributed its 38-page memo to the FTC, which sets forth Chrysler's objections to the GM-Toyota plan.

McCammon noted that the proposed arrangement would "combine the resources of the first and third largest auto companies in the world."

"And by eliminating competition between the two companies in small cars," he said, "it would permit GM to devote more of its substantial resources to larger cars where it already accounts for a dominant two-thirds of the U. S. market."

Such a venture between U. S. companies of similar size would never be tolerated based on previous interpretation of U. S. antitrust laws, McCammon said.

"Why, then," he asked, "should a project between a foreign and domestic producer be given favored treatment when two domestic producers would never be given such treatment?

"We believe that the FTC has the obligation to move promptly to prevent this combination between GM and Toyota," he said. "In the past, the FTC has moved to block joint ventures between companies where competition was far less significant and less direct than it is between GM and Toyota.

"Failure to challenge the proposed relationship between these two major direct competitors would be a startling and wholly unjustified departure from past precedent in the enforcement of U. S. antitrust laws," he said. "Such a result would have ramifications reaching far beyond the auto industry."

McCammon said that Ford continues to believe that overseas producers who wish to benefit from the U. S. market should manufacture, invest, pay taxes and provide jobs here.

However, he said, "the GM-Toyota joint venture is not designed to produce cars for Toyota; it is designed to produce cars for GM. Accordingly, this does not represent a commitment by Toyota to produce its

Calls for BBB arbitration on engine, transmission problems

FTC approves settlement with GM

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The vote is in and the reactions are mixed on the FTC's proposed settlement with General Motors over engine and transmission problems. The settlement was approved by the FTC last week by a 3-2 vote.

This is the first time a proposal has involved the 50-state arbitration system that GM has with the Council of Better Business Bureaus.

GM admits no liability under the tentative proposal, which cannot become final until a 60-day comment period has passed, after which FTC can change its mind. GM described the proposal as a "much greater opportunity for immediate, long lasting and comprehensive consumer benefits than would ever be achieved through litigation."

Carol T. Crawford, FTC's new director of consumer protection, is "delighted" because GM is "locked in" to a settlement program and, for the next eight years, consumers are eligible for redress for any problem involving powertrain components and consumers who have had problems but have sold the car can seek redress in some 39 cities through the local BBB panels—all for free.

Commissioner Patricia Bailey said she voted for the proposed settlement because the alternative was "continued litigation which would take at least until the end of the decade." She said by that time, those with 1974 cars "will have given up, disappeared, or lost records," and even if they got money, the dollars would have eroded in value.

"Unprecedented in numbers and scope" is how the chief staff attorney in the FTC's Cleveland Office (where the case originated in August, 1980) described the settlement.

As the Center for Auto Safety sees it, the proposal is a "gross consumer abuse and sell-out because it offers consumers nothing they would not obtain in any event."

Center Director Clarence Ditlow III said that the "biggest economic loss to consumers, excess depreciation of thousands of dollars per vehicle for the one million diesels covered by the settlement," is not covered under the arbitration.

But, according to FTC official Crawford, the arbitration covers other GM powertrain problems, such as all those diesel engine problems allegedly not

breaking news

IUE and GM pick lifetime job plant

WARREN, O. — The International Union of Electrical Workers (IUE) and General Motors have chosen the Packard Electric Division here as the first IUE-represented location to participate in the "lifetime job security" pilot project. Under the plan 80 percent of the workers will be guaranteed protection from permanent layoff. There are about 8,300 IUE members in the plant. Similar programs were announced at four locations by the UAW and GM last year.

Wolter gets top sales job at VW Division

TROY, Mich.—James G. Wolter has been promoted general sales manager for the Volkswagen Division at Volkswagen of America, succeeding William J. Young, who is leaving the company. Wolter, who joined VW in 1971, is currently Washington manager. Charles R. Hughes, manager of marketing for the division, will head the Washington region.

In first six months of '83 model year

Diesel-car sales plunge 48 pct.

By Jim Plegue
Staff Writer

Sales of diesel-powered automobiles in the U. S. have skidded 47.98 percent during the first six months of the 1983 model year and now comprise less than 3 percent of the total car market.

The statistics are particularly discouraging for the domestic makers.

Consider: General Motors' market share slipped 12.97 percentage points during the first six months of the '83 model year and has dropped to less than 50 percent of the total diesel market.

Consider: Volkswagen diesel sales plummeted 60 percent during the first half of the year.

Consider: Mercedes-Benz' diesel-market share exceeded the VW-Audi share during the first six months and is within 1½ percentage points of Oldsmobile, the traditional diesel sales leader.

• Total diesel sales during the first six months of the 1983 model year (Oct. 1, 1982, to March 31, 1983) were 119,074 units, tumbling from the 228,927

23 acres under one roof

Honda's U.S. factory spacious, spic and span

By Jim Plegue
Staff Writer

MARYSVILLE, O. — Honda's $250 million car-assembly plant here has been producing four-door Accord models for sale in the Eastern U. S. since Nov. 1 of last year but it wasn't until last week that the company opened its factory doors to the media.

The U. S. press is unaccustomed to such delays but Honda spokesmen shrug it off, explaining that company officials wanted everything at the plant to be just so.

And that it was. The plant is a modern one - million - square-foot facility — "23 acres under one roof," boasted an official — located adjacent to Honda's four-year-old motorcycle plant in the heart of rural Ohio.

It is spacious and fairly well lit by factory standards, so clean you could eat off the floor.

"We have no janitors here," said Plant Manager Bob Watson. "All our associates (Honda's term for employes) keep the plant in the shape you will see it in now."

Members of the press were shown the plant on April 25. The official dedication, attended by local and state officials, Honda suppliers and others, was held the following day. Yoshio Okawara, Japan's ambassador to the U. S., was a speaker.

Honda's plant is building about 185 cars per day on one shift and employs about 800 workers. Only four-door Accord models are being built and sold in states east of the Mississippi River. Eventually—this fall, according to a plant engineer—the Marysville facility will build Accord hatchbacks for the Eastern states. Marysville will also assemble the Honda Accord Special Edition model for the Eastern states.

• By mid-1984, Marysville will hit full stride, employing 2,000 workers and producing 600 cars on two daily shifts, according to Kazuo Nakagawa, president, Honda of American Mfg.

Nakagawa tackled the issue of union representation for Honda plant employes before the question ever came up. Nakagawa said it is an issue "best left up to our associates."

Honda employes and company officials were all clad in the same uniform — white work clothes and green caps with "Honda" printed on the crown.

The four-door Accord has a U. S.-sourced content of 50 percent. Honda said it is trying to increase that percentage but one official said that it becomes a difficult task because of the total equation of pricing, quality and supplier proximity.

From the welding operation—which the press was not allowed to photograph—to the end of the assembly line, the finished Accord sedan requires 12 to 16 hours of work.

• Honda said its assembly plant was funded 95 percent from sales of Honda cars and motorcycles in the U. S. Honda owns additional acreage next to its plants "for future possibilities," an official said.

Cliff Schmillen, senior vice president of American Honda Motor Co., Inc., said Honda expects sales of 400,000 cars during 1983, including about 50,000 built in Ohio.

Schmillen said Honda officials are hoping that buyers will not perceive the U. S.-built Accord any differently than they do those made in Japan—a problem that Volkswagen faced with its U. S.-built Rabbits.

"We feel the best way to attack that problem is to say as little as possibie and let the car speak for itself," Schmillen said.

Accord Special Edition bows

Honda has introduced an Accord Special Edition four-door sedan featuring leather seating, power moonroof, dual remote-controlled outside mirrors, power windows and door locks, aluminum alloy wheels and stereo with power booster and seven-band graphic equalizer. One color scheme is offered—charcoal gray exterior with dove gray interior.

Pontiac Fiero moves smoothly toward Job One

By Jim Plegue
Staff Writer

Pontiac's mid-engined Fiero sports car is heading toward its mid-July Job One production date with pilot output "as smooth as any we've ever seen," said William Hoglund, Pontiac general manager.

"And that's disregarding the fact that we've got more new technology in this car than has come out of the United States in one hell of a long time," Hoglund said.

The Fiero, known as the GM P-body, will debut this fall as an '84 model. Pilot production of the plastic-bodied two-seater began last month at the division's revamped home plant in Pontiac. Annual production is targeted at 110,000 or more.

Fiero will ride on a 93-inch wheelbase with overall length of 165 inches. Hoglund said Fiero will weigh 2,450 pounds, rather than the 2,550 pounds listed last week by AUTOMOTIVE NEWS.

Fiero's plastic body is attached to a unique "space frame" chassis, comprised of more than 270 pieces, about 10 to 15 percent of which are made of high - strength lightweight steel.

Hoglund said manufacturing difficulties with a handful of those components required a change to conventional steel within the last six months, but he said those changes have added no appreciable weight to the car.

The Fiero's target weight of 2,450 has been unchanged during the last three years, Hoglund said, though in its concep-

As his successor on board

Fraser sees Bieber for Chrysler

By Marjorie Sorge
Labor Editor

UAW President Douglas A. Fraser will not stay on the Chrysler Corp. board of directors beyond his one-year extension, and he "is confident" he will then be succeeded by Owen Bieber.

Bieber is due to replace Fraser as head of the one-million member UAW when Fraser retires at the union's Constitutional Convention in Dallas, May 15-20.

"I'm not saying I have any agreement or commitment, but let me put it this way: I would not stay on for this year except that I was confident that Owen Bieber will succeed me in a year," Fraser told AUTOMOTIVE NEWS in an interview. "I have absolutely no intention of staying beyond the one year."

During the interview, Fraser also said the union would not be so particular about jurisdictional lines during organizational drives; that the UAW would have preferred that Toyota build its own plant in the U. S. rather than enter into a joint venture with General Motors, and that the union should have restructured itself by eliminating another vice presidency and consolidating the four Detroit regions and three Ohio regions.

In addition, he said he believes the job market "absolutely hit bottom last year" but said he was not as confident about the strength of the recovery in the auto industry.

"I think it's weak and I think unless we get an increase in sales, all we're doing is building inventories," he said. "We've increased production substantially, but there is no increase in sales. If we increase sales this year by 17 percent, we'd still be 26.5 percent below 1978 (based on figures from numerous forecasters)."

• Fraser recently agreed to stay on the Chrysler board for an additional year at the urging of both Chrysler officials and UAW members. Originally, he said he would retire from the board when he retired from the union presidency.

But after conversations with Lee Iacocca, Chrysler chairman, and union officials, Fraser decided to remain on the board. He said Iacocca wanted Bieber to get his feet wet as union president before assuming the board seat and Bieber wanted to postpone taking over the position until after 1984 bargaining with Chrysler is completed. That contract expires Jan. 14, 1984.

"That makes it kind of clumsy and so, as a consequence of all these things, I decided to stay," Fraser said.

Fraser also sees changes coming in how the union spends its resources. He said he expects the UAW to spend more money on political action, education and communication and organizational activities.

He emphasized that the union would not be so particular about jurisdictional lines in the future in its organizing drives.

In the past, unions have been careful not to tread on the organizational turf of other unions, but the current difficulties in organizing and declining memberships have chopped down some of those barriers. The UAW's membership has dropped from 1.5 million in 1979 to just over one million this year.

While not abandoning the automotive arena, the UAW will broaden its horizons, moving into non-traditional organizing areas such as education and insurance and other service industries. In making these moves, the union will not be as particular as it has been in the past about what union would normally organize those areas.

"We intend to move in where no other union has gone, regardless of whether or not it is the traditional organizing area," a UAW spokesman said.

The UAW will not violate the AFL-CIO stipulation that no union can move into any company which has or had a bargaining relationship with other unions, the spokesman said.

• Another problem facing the UAW is the new GM-Toyota venture. While the union has long been advocating the need for Japanese manufacturers to put their money where their

Dealer offers to buy property from DeLorean

One of John DeLorean's tenants was trying to reach him last week with a plan that could mean cash for the former auto maker.

Les Donovan, Prestige Pontiac/Cadillac, Wichita, said he had read about DeLorean's need for cash and thought he might be able to help.

Donovan said his dealership currently has a 20-year lease from DeLorean on the dealership property and equipment but that he would now like to buy the real estate and equipment.

"Everything I've been reading says John has been forced to liquidate everything he has," Donovan told AUTOMOTIVE NEWS. "We'd like to own this property. We have a 20-year lease on it, but we would like to turn that into a purchase."

Donovan said DeLorean's Wichita attorneys had been unable to help him reach his landlord.

Documents filed in conjunction with the federal drug trafficking charges in Los Angeles indicate the Wichita property and equipment had an "estimated realizeable market value" of $1 million last October with a secured loan balance outstanding of $1,118,000 at that time.

Goes *faster, stops quicker*

Audi adds "shorter" performance gears and ventilated front-disk brakes to make its limited-edition (about 1,800 in 1983) Coupe GT model go faster and stop quicker. Additionally, the Coupe GT has a new sport exhaust system, spoke-style alloy wheels, a rear spoiler, stiffer shocks and springs, blacked-out trim and special interior appointments.

Weighted body found in New York lake

Death of former GM official probed

By John A. Russell
New York Staff Writer

NEW YORK. — State Police investigators are probing into the background of George M. Perry, a former General Motors executive whose weighted body was found in an upstate lake with three .22 caliber bullets in his head.

Federal agencies have been contacted, but are not actively involved in the investigation. Reports in local newspapers have suggested intelligence involvement but the FBI is not actively involved in the case.

An FBI spokesman said the agency has offered its services to the New York state police to investigate any leads the police develop that are interstate or international.

Perry was general manager of GM's Terex Division until it was sold in late 1980. His body was discovered three weeks ago by a fisherman on Lake Tiorati, in Harriman State Park. At the time of his disappearance, Perry had been working for Stiil Bras, Inc., of Sao Paulo, Brazil as a consultant and had lived in Sao Paulo since last August.

Perry, 64, vanished from a New York City hotel in early January, leaving $2,000 in U. S. and Brazilian currency in the hotel safe. None of his personal belongings have been found.

• Twelve investigators have been assigned to the case and the autopsy revealed that Perry was shot at close range.

Although police are looking into a possible connection between Perry and U. S. intelligence, Joseph Brown, Orange County district attorney, told AUTOMOTIVE NEWS that they have not been able to establish such a connection.

When asked if the murder could be considered "professional," he responded that the typical street robbery could probably be ruled out and "obviously the person did not want the body found." Police, however, have not established a motive for the slaying.

He was supposed to leave Jan. 10 for Switzerland to meet Joseph Vanacek, president of Stiil Bras.

Perry last had contact with his family, his youngest son, James, 22, on Jan. 7.

When contacted by AUTOMOTIVE NEWS, James Perry declined to discuss the case.

The family reported him missing on Jan. 21 and hired a private detective agency to find him. Perry had two more sons, Bill, 33, and Jack, 28. His wife committed suicide last summer after several years of mental illness.

Perry was born in Prague, Czechoslovakia and lived there with his American parents until 1937.

During World War 11, Perry was a B-24 pilot with the U. S. Eighth Air Force and received the Distinguished Flying Cross, the Bronze Star Medal and the Air Medal with four oak leaf clusters.

He was also a staff intelligence officer with the U. S. Strategic Bombing Survey and interrogated German officers for that unit.

After he obtained his release from military service, he joined Euclid Corp., the predecessor of Terex, as assistant export manager.

After serving in various capacities with Euclid and its successor, Terex, he was named general manager of Terex in 1974. He left GM after Terex was sold.

In 1976, Perry was honored by Queen Elizabeth II, who named him Honorary Commander of the Most Excellent Order of the British Empire.

• Although Perry and Vanacek were described as close friends, Perry's son, James, said he did not know when or where they met, nor had he ever met Vanacek.

Stiil Bras was described as an export-import operation handling many lines, including heavy-duty cranes and tractors, which was the major business of Terex.

Attempts to reach Vanacek in Sao Paulo were unsuccessful. The U. S. subsidiary of Stiil Bras, Sucotec Corp., in New York, referred all calls to Vanacek's attorney, who was unavailable.

All makers except VW post increases

Mid-month sales show 19 pct. gain

By Jenny L. King
Staff Writer

Domestic new-car sales in mid-April were up more than 31,000 units over the same period a year earlier and notched the highest mid-month total so far this calendar year. It was the third consecutive 10 days in which sales improved and the ninth gain in 11 periods of 1983.

April 11-20 sales numbered 190,167, up 19.73 percent from 158,824 last year. On a daily-rate basis, sales were up 6.43 percent, to an average 21,130 from 19,853. There were nine selling days this year compared with eight in 1982.

Year-to-date sales rose 1,805,764 through April 20, up 6.67 percent from 1,692,916 in 1982.

On year-to-year comparisons, sales were up for four of the five major U. S. auto makers; on a daily-rate basis, three of the five were ahead of '82 sales.

General Motors was up 11.81 percent, to 113,651 from 101,644 (down 0.61 percent daily rate). Ford Motor Co. sales of 42,084 were up 21.87 percent from 34,532 (up 8.32 percent daily rate).

Chrysler Corp. was up 40.65 percent, to 24,914 from 17,714 (up 25.02 percent daily rate).

American Motors reported estimated sales of 6,600 passenger cars this year, up 186.96 percent from 2,300 (up 154.51 percent daily rate).

Volkswagen of America dealers retailed 2,118 Rabbits in mid-April, down 19.59 percent from 2,634 a year earlier (down 28.65 percent daily rate), and estimated sales of U. S.-built Honda Accords were 800 units.

GM dropped to 59.77 percent of the mid-month market from its year-ago 64.00 percent. Ford was up to 22.13 percent from 21.74 percent. Chrysler bit off 13.10 percent, up from 11.15 percent. AMC earned 3.47 percent compared with 1.45 percent a year earlier. VWoA had 1.11 percent, down from 1.66 percent, and Honda took 0.42 percent with no year-ago comparison.

On a total basis, 11 domestic makes were up compared with a year ago. At Chrysler Corp., Plymouth was up 22.37 percent, Chrysler was up 66.74 percent and Dodge was up 41.54 percent. At Ford Motor Co., Ford was up 23.34 percent, Mercury was up 22.77 percent and Lincoln was up 6.11 percent.

At GM, Buick was up 21.93 percent, Cadillac was up 25.81 percent, Chevrolet was up 11.60 percent, Oldsmobile was up 3.58 percent and Pontiac was up 5.43 percent.

Imperial was off 31.37 percent, VW was off 19.59 percent and AMC (not including Alliance) was down an estimated 15.00 percent. Renault Alliance and Honda Accord were not on the market at this time in 1982.

Mack sale to Renault sought by parent firm

By Jack Walsh
Truck Editor

Signal Cos., parent firm of Mack Trucks, Inc., has said "no" to the truck business and is trying to get Renault to acquire a greater interest in the veteran heavy-truck manufacturer.

Renault, which builds the Classes 6 and 7 Mack Mid-Liner mid-range diesel trucks, already owns a 20 percent interest in Mack, and Signal is talking with the French company about increasing its holdings to as much as 45 percent.

The decision to dispose of Signal's 80 percent interest in Mack was announced by Forrest N. Shumway, chairman, at the company's annual meeting last week in San Diego.

There has been considerable speculation that Signal would spin off money-losing Mack (it had a net loss of $32 million in 1982 on sales of $1.29 billion) since Signal's merger with Wheelabrator - Frye, Inc., in January.

Shumway said that if Renault takes control, the remaining Signal holdings in Mack will be distributed among Signal shareholders or disposed of through a public offering.

Signal wrote down its investment in Mack by $108 million in the first quarter. The company said part of that sum reflected Mack losses for the period, about the same as the $8.4 million the truck manufacturer lost last year.

• Shumway said he thinks Mack's future would be brighter under Renault.

"Mack is going to have a tougher and tougher time competing with those international companies," he added, referring to AB Volvo, which acquired the White manufacturing rights, and Daimler-Benz AG, which bought Freightliner Corp.

Signal acquired Mack late in 1967, two years after Zenon C. R. Hansen took over command of the company and brought it back from the brink of bankruptcy.

"We got Mack turned around in 1966, and then the vultures started moving in," said Hansen, who retired in 1975 as chairman. "There were a number of companies interested in buying Mack.

"I made the deal with Signal, and it worked well all the while that I was with Mack," he added.

In 1979, Signal sold 10 percent of Mack's common stock for $50 million cash to Renault Vehicules Industriels, a subsidiary of Renault Holdings S. A. An additional $65 million of subordinated debentures was converted into another 10 percent equity last July.

VW production underway in Mainland China

TOKYO. — Production of Volkswagen cars has started in Mainland China.

With parts supplied by Volkswagen of West Germany, five VW Santana models were turned out in Shanghai, according to the Chinese news agency.

Production is expected to reach 600 this year and climb to 20,000 a year by 1985. China reportedly produced 176,000 vehicles in 1981.

Tempo priced from $6,840; Topaz line starts at $7,355

DEARBORN.—Ford Motor Co. has priced its new front-wheel-drive compact cars, the Ford Tempo and Mercury Topaz, which will be introduced May 26.

Tempo prices start at $6,840 for the Tempo L. The Tempo GL is $7,084, and the Tempo GLX is $7,544. The Topaz GS is $7,355, and the Topaz LS is $7,756. Topaz has a higher level of standard equipment than the base Tempo.

Prices are the same for the two-door and four-door notchback models in each series of Tempo and Topaz, which is a departure from normal automotive pricing procedure.

Dealer discount is 15 percent on the cars, 18 percent on options.

At $6,840, the Tempo L is $250 more than the Ford Fairmont which it replaces in the lineup.

The base Tempo price is higher than that of the base price of the Plymouth Reliant / Dodge Aries four-door at $6,718, but Ford said the Tempo dealer discount is higher. Tempo also is priced above base models of the Chevrolet Cavalier and Pontiac 2000, but Ford noted that Tempo is less than the Nissan Stanza, Honda Accord and Mazda 626.

Tempo L standard equipment includes AM radio (delete option), power brakes, console, wheel covers, halogen headlights and carpeting. Automatic transmission and air conditioning are not available on the Tempo L.

Tempo/Topaz wheelbase is 99.9 inches, and the cars are 176.2 inches in overall length. The engine is a new 2.3-liter four, and four-speed manual transmission is standard.

Ford said projected EPA ratings for Tempo/Topaz are 28 MPG city and 42 MPG highway with four-speed manual and 24 MPG city and 33 MPG highway with automatic.

Ford to expand French factory

BORDEAUX, France. — Ford-France has invested more than $40 million to expand the capacity of its gearbox factory here.

This follows the decision to source four- and five-speed manual transaxles for the Escort going into production this August in Sao Paulo, Brazil.

Build bigger cars in U. S., too

AMC plans to import larger Renault models

By Kathleen Hamilton
Financial Editor

American Motors plans to double its coverage in the U. S. auto market within the next five years by importing larger models from Renault and by building larger Renault models here.

Speaking at AMC's annual meeting in Detroit, AMC Chairman Paul Tippett said AMC plans "to move from a product lineup that covers 25 percent of the U. S. car market to one with over 50 percent coverage."

After the meeting, he said AMC plans to use the Encore, a hatchback version of the Alliance which has bowed as the R-11 in Europe — as the 1984 replacement for the Le Car, which will no longer be imported. AMC has no plans to introduce a car smaller than that new hatchback, he said.

That means that AMC has nowhere to go but up in car size — up, and out of what is the most competitive auto segment, subcompacts. By doubling its product coverage, AMC aims to more than double its sales in five years, Tippett said.

AMC expects the new downsized XJ Jeep series, also due in 1984, to be the start of an expansion into the light-truck market.

Jeep competes in 12 percent of the light truck-van-4x4 market now, and expects to be competing in 41 percent of the market in 1985, Tippett said.

"Pickups are 50 percent of the 4x4 market. We've got to get aggressive," he said.

AMC will be targeting the downsized and highly successful Ford Bronco II and Chevy S-10 Blazer both in price and features initially, and plans to get into the 4x4 minipickup sales competition after that.

The new AMC-developed 2.5-liter four-cylinder engine will trim $300 from the cost of using engines from other makers in Jeeps and Eagles, he said.

Bernard Hanon, Renault chief executive and an AMC director, said he is hopeful that sales of the Alliance and XJ will propel AMC to profits in the first quarter of 1984.

Tippett cautioned that that should not be taken as a projection. AMC last made a profit in the first quarter of 1980.

AMC is selling the Alliance for more than it costs to make it, Tippett said. Small cars are notoriously unprofitable for U. S. car makers.

Speaking on AMC's plans for Asia, Tippett said, "I think we should be more aggressive there." The name Jeep is valued there, he said. AMC has been negotiating for several years with the Chinese government.

Stockholders reelected the 14 directors nominated by the board, authorized an additional 40 million shares of common stock and created a new class of preferred stock, authorizing 10 million shares.

Tippett said AMC has no plans to issue any of the new stock at this time.

Touche Ross & Co. was returned as independent auditors. A stockholder proposal to change the date of the annual meeting was defeated.

Automotive News analysis of new-car registration based on R. L. Polk & Co. statistical report.

But February total trails January's

Month's registrations top year-ago

By Jenny L. King
Staff Writer

New-car registrations in the U. S. in February dipped 4.47 percent from the January total but climbed 4.20 percent compared with February, 1982, according to figures compiled by R. L. Polk & Co. It was the fifth consecutive month in which total registrations were above comparable year-ago levels.

This February, 568,663 new domestic and imported cars were registered, up 4.20 percent from 545,746 in 1982. They represented a decline of 4.47 percent from 595,294 in January of the current year.

U. S. domestic registrations numbered 387,874 for the second month of 1983, up 1.55 percent from 381,942 a year earlier but off 4.05 percent from 404,256 in January.

Registrations of imported new cars marked a record penetration for the month, with 31.79 percent of the total market. A year earlier, imports accounted for 30.01 percent, the former February record. Imports numbered 180,789 in February, up 10.37 percent from 163,804 last year.

Total registrations for the first two months of 1983 were up 10.33 percent, to 1,163,957 from 1,054,935 in 1982. Domestics numbered 792,130, up 8.18 percent from 732,237. Imports, at

Table on Page 37.

371,827 were up 15.22 percent over the year-ago 322,698.

Chrysler Corp. and the combined imports increased their shares of the month's market this February compared with 1982 standings. Chrysler was up 0.99 percentage points, to 9.06 from 8.07, and the imports enjoyed a 1.78-percentage-point gain, climbing to 31.79 percent from 30.01 percent.

General Motors dropped 1.84 percentage points during the month, going to 41.69 percent from 43.53 percent. Ford Motor Co. was down 0.46 percentage points, to 16.65 percent from 17.11 percent, American Motors dipped to 0.80 percent from 1.26 percent, and miscellaneous domestics were off 0.01 percentage points, to 0.01 percent from 0.02 percent.

For the domestics in February, intermediates represented the largest single segment of the market, at 35.83 percent. A distant second were compacts, at 22.52 percent, followed by standards at 19.46 percent, subcompacts at 14.37 percent and luxury models at 7.82 percent.

Imports, with 31.79 percent of the total, accounted for the biggest piece of the overall market during the second month of 1983. The breakdown was as follows: Imports (180,789) with 31.79 percent; intermediates (138,993) with 24.44 percent; compacts (87,327) with 15.36 percent; standards (75,481) with 13.27 percent; subcompacts (55,736) with 9.80 percent, and luxuries (30,337) with 5.34 percent.

• In February, 1982, the market-class spectrum was: Imports (163,804) with 30.01 percent; intermediates (106,012) with 19.43 percent; compacts (104,093) with 19.07 percent; subcompacts (92,892) with 17.02 percent; standards (51,065) with 9.36 percent, and luxury models (27,880) with 5.11 percent.

On a year-to-date basis through Feb. 28, Ford Motor Co., Chrysler Corp. and the imports increased their presence in the U. S. market. Ford was up 0.61 percentage points, to 16.88 percent from 16.27 percent; Chrysler was up 0.41 percentage points, to 8.62 percent from 8.21 percent, and the imports climbed 1.36 percentage points, to 31.95 percent from 30.59 percent.

Among the domestics for the two months, 61.18 percent belonged to GM compared with 62.65 percent a year earlier. Ford earned 24.81 percent, up from 23.44 percent. Chrysler had 12.67 percent, up from 11.83 percent. AMC held 1.31 percent, down from 2.04 percent, and miscellaneous domestics accounted for 0.03 percent, down from 0.04 percent.

The February domestics-only shares, 1983 vs. 1982, were as follows: GM at 61.12 compared with 62.19 percent; Ford at 24.41 percent vs. 24.45 percent; Chrysler at 13.29 percent vs. 11.52 percent; AMC at 1.17 percent vs. 1.81 percent, and miscellaneous domestics at 0.01 percent vs. 0.03 percent.

All his jobs were fun

Cook looks back on 42 years at Olds

By Al Fleming
Industry Editor

LANSING.—As part of General Motors' top management, Robert J. Cook became practiced at handling pressure. As happens with any GM vice president, it came looking for him all the time.

But you'd never know it in the case of the unflappable Cook, who retired this month at 61 as general manager of Oldsmobile and vice president of the corporation.

He's always come across as just plain Bob, a good ol' Lansing boy who got a kick out of any job that came his way, did the best he knew how at it, and, gosh, there he was one day, a captain of the automobile industry.

Sitting at a conference table at his office here, the day before his official leave-taking April 1, Cook, as usual, was restless about being interviewed, expressing surprise that anyone would take the time to drive from Detroit to Lansing just to talk to someone about to leave the business.

But Cook isn't just any guy. If there is a "Mr. Oldsmobile," he's it. His 42-year GM career, all at Oldsmobile, began in 1940 as a GM Institute student sponsored by the division. He had been general manager of Oldsmobile since January 7, 1974, making him senior among GM car division general managers.

Although Cook may not have inspired awe like some charismatic GM car-division general managers of the past—the Coles, the Knudsens, the Esteses — Oldsmobile became an automotive superpower under his leadership.

Starting with the 1975 calendar year, Olds has been the No. 3 seller of passenger cars in the U. S. for eight straight years. Its penetration of industry went from 6 percent in 1974 to 10.1 percent in 1982, highest in the

Continued on Page 44, Col. 3

A lifetime of service

"I never had a job—not one—I didn't think was fun," said Oldsmobile General Manager Robert J. Cook upon his retirement. Under his leadership, Olds has been No. 3 car seller in the U. S. for eight consecutive years.

AMC reports sales climb, but so does net loss

SOUTHFIELD, Mich. — Despite a 30-percent increase in dollar sales for the first quarter, American Motors announced a net loss of $66.08 million ($1.21 a share), nearly 30 percent worse than one year ago.

The loss had been expected by AMC; its officials said that launch costs for its new Renaults and forthcoming Jeeps, as well as depressed international sales, would cause big losses in the first half of the year.

AMC expects "significant" improvements during the second half, but said its operations probably will not be profitable until 1985. The last profitable year for AMC was 1979.

AMC said its optimism for the second half of 1983 lies in the success of its Renault Alliance and a "dramatically" improved 4WD market.

The loss was the 12th consecutive quarterly loss for AMC, and the largest since the second quarter of 1982. In the first quarter of 1982, AMC lost $50.97 million ($0.93 a share).

Sales for the quarter were $782.05 million, a 30-percent increase over the $600.16 million of the first quarter of 1982.

Concern on 'escape clause'

AIADA rips proposal to change Trade Act

WASHINGTON. — Suggested changes in the 1974 Trade Act which would make it easier for industries to obtain government help when they cannot meet "honest" foreign competition were criticized by the American International Automobile Dealers Assn. before a House Ways and Means Subcommittee.

"Import relief from fairly traded imports should not be easy to get," Thomas Nemet, AIADA chairman, told the Subcommittee on Trade. He appeared with Robert McElwaine, AIADA president.

McElwaine said AIADA is particularly concerned that the act's Section 201, the so-called "escape clause" will be transformed from what he called a carefully constructed statute which protects consumers from exploitation, as well as protecting domestic manufacturers from extremely strong foreign competition, into "legislation with a distinctly protectionist bias," as is envisioned by proposals before Congress.

"On the whole, Section 201 has worked well to balance the interests of the parties involved" in making trade policy in this nation's pluralistic society, McElwaine said.

Regarding related issues, the AIADA representatives said:

1. Adjustment assistance, which is being phased out, should remain in some form to provide funds for wage maintenance of unemployed workers, retraining and government guaranteed loans for retooling and modernization.

2. U. S. industries which benefit from actions protecting them from import incursions into their markets should be obligated to create a well-developed plan for industrial recovery, subject to annual review. These industries should be accountable to consumers who must pay higher prices for products that are protected.

3. The statute should clarify the GATT obligation of the U. S. government to provide a "compensation" in the event a decision is made by the President to impose import restraints.

After an industry receives protection from a specific country's imports, the nation of origin has the right to request compensation in another trade area. Thus, the AIADA said, the U. S. might be required to reduce other tariffs, thereby threatening jobs elsewhere in the economy, or facing higher tariffs abroad, with the same result.

"Why should the U. S. high-technology or aircraft industries be forced to pay a price in the form of high customs barriers abroad for the sake of other U. S. industries in decline for reasons that are more substantial than imports?" McElwaine asked.

Auto terminal to be constructed in Philadelphia

PHILADELPHIA. — Philadelphia Port Corp. is preparing to build an automobile import and export terminal on city-owned Hog Island, a 150-acre tract on the Delaware River.

S. T. Hudson, Inc., an engineering firm, has been assigned to design the installation and contracts for construction are slated for bids this spring.

The Hog Island site is adjacent to the Philadelphia International Airport and is served by Conrail. Also, a rail spur will be built to accommodate trilevel railcars. Interstate 95 is nearby.

The first stage of development, according to the port corporation, will cover 50 acres with facilities to handle approximately 120,000 vehicles a year and will cost $10 million.

Hog Island will be operated as an open terminal available to all private operators to service ships. Leases can be arranged on a long-term or short-term basis.

Northwood names its top scholars

WASHINGTON. — In a special NADA-sponsored commencement ceremony, Norwood Institute named its outstanding scholars for 1983.

The two-year winners are: Michigan Campus — Douglas A. Indovina, and Texas Campus — Clay F. Holcomb.

The outstanding four-year scholar for 1983 is Lawrence S. Schreiber.

Young Olds dealer

Patricia M. Bianco, 27, signs an Oldsmobile sales and service agreement as St. Louis zone manager C. D. Hardy Jr. looks on. Bianco is the zone's youngest dealer. Her dealership, Bianco Oldsmobile, Inc., is in South St. Louis County.

DALLAS AUTO AUCTION

Proudly Presents . . .

OUR THIRD CORVETTE AND SPECIAL INTEREST SALE

TUESDAY, MAY 10, 1983 - 11:00 A.M.

CORVETTES, MERCEDES, ROLLS ROYCE, BMW's, JAGUARS, ETC.

Due to the great response from our other Corvette and Special Interest Sales, We proudly announce our THIRD Annual Corvette-Special Interest Sale.

Over 500 Corvettes, Mercedes and Special Interest vehicles expected for this SALE of SALES. This will most certainly be one of the BIGGEST Sales ever at the Dallas Auto Auction.

WEDNESDAY, MAY 11, 1983
Giant Consignment Sale
Over 1400 Units Expected

Make your plans now to attend these two great days, at Dallas Auto Auction.

Phone early for reserved numbers and motel reservations.

Call: Barry Roop or Gary Smith

To fight fleet subsidies

FDA approves $50,000 war chest

By John A. Russell
New York Staff Writer

LEXINGTON, Ky.—A $50,000 anti-fleet-subsidy war chest was approved by the Ford Dealers Alliance (FDA) as the organization prepares to fight the manufacturers on fleet sales.

Ed Mullane, FDA president, made the announcement here at a meeting of the Kentucky Automobile Dealers Assn. and termed the fund an "anti-fleet subsidy educational fund."

In addition, Mullane said, each member of the board has pledged $100 to the fund.

The purpose of the fund is to put the facts on leasing subsidies "before the public," Mullane said. He said that the organization is preparing a national advertising campaign bringing the issue to the public and claiming that "our retail customer was overcharged $200 so that Ford, General Motors and Chrysler could subsidize fleet sales."

Mullane and the FDA have alleged that manufacturers subsidize fleets to the tune of $1 billion which the companies build into the price of the car.

While NADA has been active on this front and has been instrumental in having a bill introduced in Congress banning subsidies, Mullane asked, "How hard will NADA push this bill and do they have the stomach for a real conflict?"

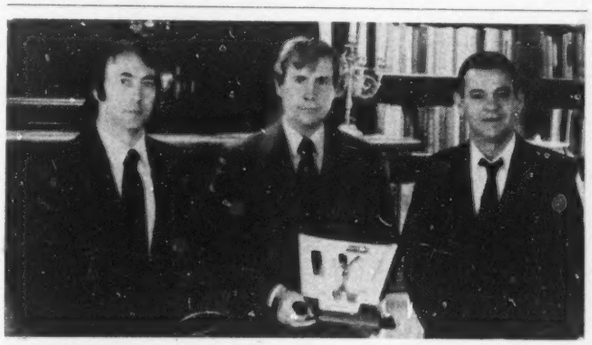
He said that there is a need to put the "facts before the public" in order to create a "climate of opinion" that will aid "litigative and legislative" approaches.

Mullane, who launched his attack on fleets late last year, outlined many of the allegations on subsidies. He said that the FDA would be sending letters to all state and local dealer associations asking them to contribute to the fund. In addition, he said, "We're writing every dealer in America asking him to contribute."

Mullane cautioned that "this is not a battle for the weak of heart."

He added that success or failure would not be measured in "10-day reports, but in years and decades."

"But for years and decades we've been talking about fleet subsidies," Mullane said, and added, "Let's stop talking and start acting."



Rolls-Royce sales leader

Charles Schmitt & Co., St. Louis, sold more Rolls-Royces in 1982 than any other U. S. dealer. Schmitt, center, was recognized by the factory for this achievement as David Carmichael, left, Zone 2 sales manager, presented him with a plaque. Ray Hummel, dealership vice president, joined in the presentation.

March car sales in Canada equal January-February total

By Jenny L. King
Staff Writer

Sales of new North American-built cars in Canada in March were heady enough to match the combined efforts of January and February, as all the major car makers except Ford of Canada reported impressive gains over March, 1982, sales.

Truck sales were up 5.75 percent. It was the first month since June, 1981, that truck sales had pulled ahead of the preceding-year total.

Passenger-car sales numbered 59,873 this March, up 33.17 percent from 44,960 a year ago and nearly matching the 60,816 sum for January and February of 1983. Year-to-date sales reached 120,689, up 14.09 percent from 105,780 last year.

Truck sales climbed 5.75 percent in March, to 17,686 from 16,724. Truck sales for the first quarter were off 8.12 percent, to 37,623 from 40,946 in 1982.

General Motors' car sales soared 69.98 percent in March, to 30,595 from 18,010 last year. Ford was down 14.65 percent, to 11,143 from 13,055. Chrysler dealers retailed 13,196 units, up 26.30 percent from 10,448. American Motors was up 51.30 percent, to 3,964 from 2,620, and Volvo reported a gain of 17.90 percent, to 975 from 827.

GM's share of the March market was 51.10 percent, up from 40.06 percent a year earlier. Ford plunged to 18.61 percent from 29.03 percent. Chrysler slipped to 22.04 percent from 23.24 percent. American Motors was up to 6.62 percent from 5.83 percent, and Volvo picked up the remaining 1.63 percent this year, down from 1.84 percent in 1982.

March truck sales of 17,686 include captive imports for the major auto makers. GM was up 13.09 percent, to 8,863 from 7,837 last year. Ford climbed 6.72 percent, to 5,959 from 5,584. Chrysler sales of 2,692 new trucks were down 8.59 percent from 2,945. AMC dealers sold 172 new Jeeps during the month, down 51.96 percent from 358.

GM earned 50.11 percent of the truck market in March, up from 46.86 percent. Ford had 33.70 percent, up from 33.39 percent. Chrysler slipped to 15.22 percent from 17.61 percent and AMC dropped to 0.97 percent from 2.14 percent.

Rent a Cougar, buy one, get a check from Budget

CHICAGO. -- Budget Rent a Car is offering to refund the rental fee up to $100 to customers who rent a 1983 Mercury Cougar and then purchase one.

MaryBeth Ther, advertising director of the company, said the promotion will run from April 15 to June 30, though customers have until Aug. 31 to receive the refund from Budget.

Customers must send the company a copy of their rental agreement along with proof of purchase of the Cougar.

The company is calling the program the Budget Test Drive and advertising is slated to appear in Frequent Flyer, INC., the Wall Street Journal and USA Today.

Budget is featuring a daily rate of $34.95 with unlimited mileage for the Cougar with the offer.

This is part of a program Budget started earlier this year when the company dropped out of the "giveaway blitz" by rental companies and began to rent Lincoln Town Cars for a daily rate of $39.95.

While the programs are separate, Ther noted that they were directed primarily to the business traveler.

Morris Bolzberg, Budget president, termed the Cougar program a "back to the basics 1983 marketing strategy" of providing cars at low rates.

Ther told Automotive News that the program is entirely from Budget and Lincoln-Mercury is not involved. Asked why those two models were selected, she said the company's franchisees "buy a lot of Lincoln-Mercury products."

The company has budgeted "in the seven figures" for advertising the program, she said.

Total falls nearly 48 pct.

Diesel sales share cut to less than 3 pct.

Continued from Page 1

sold during the comparable 1982 period. The diesel's share of the total domestic and import new-car market dropped to 2.92 percent during 1983 from 6.18 percent during the 1982 period.

Falling or stabilizing gasoline prices, the higher price tag on diesel-engine options and consumer disenchantment with some diesel engines have all contributed to the waning sales.

Only four makes — all of them imports — reported sales gains during the period.

Mercedes sold 26,754 diesel cars during the six-month period, up 8.27 percent from the 24,709 sold during the comparable '82 period. Mercedes' market share jumped 11.68 percentage points — from 10.79 in '82 to 22.47 percent of the market during '83. That share is second among individual makes only to Oldsmobile — and by only a point-and-a-half.

Diesel-powered cars accounted for 77.8 percent of all Mercedes U. S. sales during the period, down slightly from 78.5 percent last year.

• Volvo, Isuzu and Audi were the only other makes to record diesel-car sales increases during the six-month period.

GM's sales of 56,094 diesel units during the first six months of the '83 model year represented a 59.21 percent nosedive from the 137,537 sold during the equivalent period in '82.

Likewise, GM's market share slipped from 60.08 percent last year to 47.11 percent during '83 — the first time the corporation's penetration has dipped below 50 percent since GM became a serious diesel manufacturer.

All GM divisions took a beating during the period, with Pontiac and Chevrolet posting the biggest sales declines.

Chevrolet diesel sales of 9,548 were off 76.90 percent from the 41,350 sold last year. All Chevy car lines were down but, most notably, the Chevette diesel (powered by an Isuzu-built 1.8-liter engine) crashed from 14,485 sales last year to 1,319 deliveries this year.

Chevrolet's share of the diesel market dropped 10.04 percentage points — from 18.06 percent in '82 to 8.02 percent this year.

• Oldsmobile sold 28,472 diesel cars during the first six months of the model year, down 43.59 percent from 50,482 sold last year, yet the division's market penetration actually gained. Oldsmobile's share was 23.91 percent of the market, up 1.86 points from 22.05 last year.

Volkswagen sales, crippled by sagging interest in the Rabbit diesel, dropped to 16,331 diesel units during the first six months of the 1983 model year from 40,869 sales during the equivalent '82 period. VW's market share of 13.72 percent was down 4.13 percentage points from 17.85 percent last year.

Only about 20 percent of Rabbit sales during 1983 were diesel models, compared with 48 percent during the '82 period. In its heyday, the diesel model accounted for 60 percent of all Rabbit sales.

Sales of diesel Audis were up 23.43 percent during the '83 model year, boosted by introduction of new turbocharged diesel models. Audi sold 3,899 diesel-powered cars during the first half of the '83 model year, compared with 3,159 during the equivalent '82 period. Audi's market share more than doubled during the period.

Combined, VW and Audi sold 20,230 diesel cars, down 54.05 percent from the 44,028 sold during the '82 period. Market share dropped 2.24 percentage points — from 19.23 percent in 1982 to 16.99 percent in 1983.

Other losers during the period were Datsun and Peugeot. Datsun offered only one diesel-powered car, the Maxima, during the comparison period. The company recently added a diesel-powered Sentra model but its sales are not yet recorded.

Sales of diesel Maximas during the first six months of '83 were 2,571, down 66.75 percent from 7,734 last year, despite a 46-percent increase in total sales during the '83 period.

Peugeot sales of 3,718 units were down 37.44 percent from 5,944 during the 1982 period. Diesels accounted for 52.1 percent of all Peugeot sales during the first half of the 1983 model year, compared with 80.53 percent during the year-ago period.

Dealers stand to lose a bundle on Shay deal

Continued from Page 1

costs with dealer deposits on future production.

One of those imitators was California Classic Motor Car Reproduction Corp. (also called Thunderbird Classic Motor Car Reproduction Corp.).

When Housey and others from Model A & T joined California Classic, Shay sued. Among his complaints: The loss of his key personnel had delayed the Model A & T production schedules.

Unlike Model A & T, California Classic folded before producing any cars.

In 1980, Housey had begun forming his own company, Camelot, near Elkhart, Ind., to produce a 1957 Thunderbird replicar.

And although he had set eventual production goals for Camelot near the magic number of quickie-replicar trade (10,000 a year), Housey had always been conservative about Camelot plans.

He said in 1981 that he had taken deposits on only 30 cars.

To date, Camelot has built 12 vehicles, mostly prototypes.

He says he still has 30 orders with deposits, totaling $75,000. Camelot has 57 orders altogether, and he said he plans to take no more deposits — only irrevocable letters of credit from dealers.

• Housey moved Camelot to Michigan this year, as negotiations for the Shay assets looked more promising. He said he now employs 16 persons. Two vehicles are in production this month, and five more are scheduled to be completed next month.

By April, 1984, Housey plans to have built 400 cars and expects to be employing about 100 persons. Second-year production is scheduled to be between 1,000 and 2,000. Housey said he has no intention of ever producing 10,000 cars a year.

Meanwhile, he is redesigning the Shay vehicles, changing their structures and adding defrosters to the Model A. He will be producing four models: 1955 and 1957 Thunderbird replicas and 1929 Model A and Model A pickup.

The Model As will be equipped with new four-cylinder engines from the Shay inventory of Pinto components. The Camelot-designed 1957 T-bird replica can be ordered with V-6 or V-8, and Housey hopes to modify the Shay T-bird for a more powerful engine, too.

He said the Model As will retail for about $10,000 to $11,000; the T-birds, for $15,000 to $16,000. That will include a 5-year/50,000-mile warranty from American Fidelity Insurance Co., he said.

VW credit begins retail leasing plan

TROY, Mich. — VW Credit, Inc. (VCI), has introduced a retail leasing program for Volkswagen and Porsche-Audi dealers. The program, Prestige Leasing, is available to all 1,300 VW and Porsche-Audi dealers through 95 VCI branch offices across the U. S.

All new 1983 VW, Porsche and Audi vehicles sold or distributed by Volkswagen of America are eligible under the plan, the company said.

Lease terms range from 24 to 48 months and up to 60 months on certain models. For the customer, the leases are "closed end" with no downpayment required and, for the dealer, they are "without recourse." Customers may provide their own insurance or be covered through a dealer-arranged policy.

Peugeot sponsors bikers

Peugeot was a major sponsor of the Inaugural 1983 Tour of America professional bicycle race, held April 8-10 in Virginia and Washington. It provided 38 "official cars" for race-related functions. Here, Peugeot Motors of America President Pierre Lemaire, left, and field sales manager Peter Haskell oversee the fleet. Fifteen teams from seven countries competed for $100,000 in prizes.

Settlement with GM OK'd on engines, transmissions

Continued from Page 1

corrected and the 1981 V-8-6-4 standard Cadillac one-year engines that sometimes — allegedly — stop dead in their tracks.

However, GM points out that arbitration has in the past been available to consumers with these complaints if a 5/50 warranty applies and if the arbitration guidelines are observed.

The GM "policy" — not "warranty" — for '77 through '79 diesel engines is applied to the governor weight retainer ring for the injector pump but not for the whole engine. The current '83 GM diesel engine warranty — not "policy" — is 36 months or 50,000 miles.

GM also notes the five year period can be tested for arbitration for other non-safety problems that do not have a 5/50 warranty.

But the problems covered by the FTC-GM proposed consent go back for nine years and forward for eight years — a total of 17 years because the first models involved are '74 model cars.

Availability of possible relief for owners who sold their cars is unique and actual documentation of repair bills is not absolutely essential although it would certainly facilitate compensation.

• The only matters directly involved in the FTC-GM tentative agreement are: THM 200 transmission, used in 5 to 6 million GM rear-wheel drive cars; premature wear of camshafts and lifters used in some 15 million 305- and 350-CID V-8 engines made by Chevrolet but used widely by all divisions starting in 1974, and fuel injection pumps and fuel injectors in a half-million 350-CID diesel engines made by Oldsmobile but used in several models starting in 1977 until the present.

Under the proposal, GM would have to set up the free arbitration program within 60 days. The meeting must be held at a place which is convenient for the consumer, or it can be done by phone or in writing. No lawyers are needed since there are no rules of evidence although it is highly advisable to have repair bills or evidence of repair from mechanics.

GM must provide fact sheets, telling consumers that they can get redress of defects that show up after the warranty period. What ever the arbitration decision, GM must abide by it although the consumer may reject it.

GM would also have to send letters to those who have filed complaints with FTC or with GM.

In addition, GM would be making available all product service publications (PSPs) for each of its vehicles through the 1991 models. Moreover, it must advertise their availability in national magazines twice during each model year. GM must place posters explaining this new program in dealer showrooms and use notices in its point-of-sale brochures and use it in GM owners' manuals starting with '84 models.

• This is potentially extremely valuable data but, of course, useful only to those who know about it and how to obtain it. Lawyers and consumer activists will certainly use it as they have undoubtedly used that required under the Ford Motor Co. piston scuffing settlement.

Although a recent story in Automotive News (April 11) raised the possibility that GM's deal was a lot better than the one Ford got in its piston-scuffing settlement, the details of the tentative GM agreement were not yet available at the time of that article. It now appears that perhaps GM fared worse.

While the staff of the FTC in Cleveland is pleased with the settlement, FTC Commissioner Michael Pertschuk believes that design problems which lead to systematic car defects potentially present in all units should result in "direct, automatic refunds."

Damages may be hundreds of dollars each and, said Pertschuk, GM knew and did not tell its car buyers. Further, he added, GM "stonewalled" the FTC staff's discovery attempts and gave no other choice than to accept its offer of arbitration or drag out the trial for years.

Moreover, while the FTC staff thinks the GM fact sheets will help consumers, Pertschuk is not sure that will be the case. The sheets "result from extremely tenacious bargaining with GM and look it," he said.

Milestone car is 4 weeks ahead of 1982

Year's auto output reaches 2 million

By Patricia Hoffman
Staff Writer

Domestic auto production reached another milestone last week when the year's two-millionth automobile was assembled Thursday (April 28), about four weeks earlier than in 1982.

So far this year, the manufacturers have produced 2,041,781 cars, a 29.48 percent gain from last year's 1,576,877.

Breakdown for the year-to-date by company is: General Motors, 58.81 percent; Ford Motor, 23.26 percent; Chrysler Corp., 13.11 percent; American Motors, 2.79 percent; Volkswagen of America, 1.57 percent, and Honda, 0.46 percent.

Last week's production was estimated at 136,072 units, about even with the previous week's 136,457, but up 9.62 percent from 124,133 assembled in the comparable 1982 period.

The GM Willow Run plant, source of Omega and Skylark, was closed last week (April 25) for inventory control. Operations there are slated to resume today (May 2).

Ford's Kansas City point, idled March 14, remained closed last week for changeover to the new Tempo and Topaz models. Kansas City, recent source of Fairmont and Zephyr, will begin assembly of the new cars today.

GM's Oklahoma City plant returned last week with production of Celebrity and Century. The plant closed for rearrangement April 18 at which time assembly of the Citation was phased out.

Overtime was scheduled last week at three GM, three Ford and four Chrysler points.

The GM Lordstown and Flint facilities, plus B, C and G lines at the Lansing plant operated six days last week.

Ford's Chicago and St. Louis points worked two daily nine-hour shifts, while the Lorain facility worked two 10-hour shifts Monday through Friday last week.

Daily overtime continued at Chrysler's Belvidere, Jefferson, Newark and St. Louis plants. St. Louis worked one daily nine-hour shift, while the other three operated two daily nine-hour shifts.

Downtime is scheduled to begin today at GM's Wilmington plant. The plant will be idle one week due to overstocked inventory.

Ford earns $211.2 million; first profit in 3 quarters

By Kathleen Hamilton
Financial Editor

DEARBORN. — Ford Motor Co. reported first-quarter earnings of $211.2 million ($1.75 a share), its first profit in three quarters and the best profit since the second quarter of 1979.

One year ago, Ford reported a first-quarter loss of $302 million.

Ford's North American operations were profitable for the first time in four years. In the U. S., its after-tax profit was $111 million, compared with a loss of $506 million in the first quarter of 1982.

Unit sales in the U. S. were up 35.6 percent to 567,305 cars and trucks.

Outside the U. S., Ford's car and truck sales declined 2.9 percent to 554,095. Non-U. S. operations earned a profit of $100 million, compared with $204 million one year earlier.

Ford attributed the decline to less favorable exchange rates in Europe and the four-week strike at Ford of Britain's Halewood plants.

Worldwide sales amounted to $10.04 billion, up 12.6 percent from $8.92 billion one year earlier. Worldwide vehicle production (including tractors) climbed 15 percent to 1.14 million units.

Ford attributed its improved overall performance for the quarter to higher industry volume, especially in the U. S.; a record 13.8-percent share of the European car market, and cost-cutting measures.

Cash flow improved, increasing Ford's cash balance at the end of the quarter by $113 million to $1.67 billion (but that was still lower than the $2.01 billion on hand at the end of the comparable 1982 period), and reducing Ford's borrowing by $80 million.

Miller a 25-year dealer

HERSHEY, Pa. — C. Wilber Miller, an Oldsmobile dealer here, received a plaque for 25 years of service.

Canadian output slips for week; 24,694 cars built

Last week's Canadian car output fell 2.73 percent from the previous week's total despite production gains for Ford Motor's new Tempo and Topaz models at the company's Oakville car assembly point. Contributing to the dip was the return of normal five-day operations at General Motors' Oshawa No. One and Two car facilities following six days of assembly there the previous week.

The auto makers targeted 24,694 units last week, down from 25,386 the prior week, but output jumped 17.60 percent from last year's 20,999 units.

So far this year, the car manufacturers have finished 325,698 units, up 11.41 percent from 292,334 built last year.

Production of the new Ford Tempo was estimated at 658 units last week, nearly triple previous week's 225, and Mercury Topaz assembly was slated at 135 units, a 42.11 percent gain from 95 built the first week of production. The combined rate of the new cars will eventually reach 60 units an hour on two shifts.

The truck makers estimated last week's output at 11,616 units, down 5.31 percent from the previous week's 12,267, and down 8.19 percent from 12,652 built last year.

The GM St. Therese car facility operated daily and Saturday overtime for the second consecutive week last week (April 25). The plant worked two-hour's of overtime on two-shifts Monday through Thursday, with normal eight-hour operations resuming Friday. St. Therese also worked two eight-hour shifts on Saturday.

GM's Oshawa and Scarborough truck facilities operated six days last week.

Truck production rises to 50,097; overtime helps

Overtime at eight assembly plants boosted last week's domestic truck production 2.04 percent from the previous week's total, and output jumped 8.91 percent from the comparable 1982 period.

Truck output last week was targeted at 50,097 units, up from 49,097 the previous week, and up from 46,000 in the comparable week last year.

There were three General Motors, three Ford Motor and two Chrysler Corp. assembly plants working overtime last week (April 25).

At GM, the St. Louis, Lordstown and Detroit (P-model) facilities operated six days last week.

The Ford Twin Cities plant and its Lorain (van) facility worked two 10-hour shifts Monday through Friday. Ford's Michigan Truck point operated one nine-hour shift five days last week.

Also working daily overtime were Chrysler's Belvidere and Warren facilities. Belvidere operated two nine-hour shifts Monday through Friday while the Warren plant worked one nine-hour shift, five days.

Pickup production at Volkswagen of America's Westmoreland plant continued on normal schedules last week. Assembly there, originally scheduled to end April 21, will continue into May.

All truck facilities were reported operating last week.

58th year—$40 per year, $1.00 per copy

AMC buys 31 pct. of Mainland firm

Jeep output set for China

By Kathleen Hamilton
Financial Editor

"We decided we wanted to do something except complain against the Japanese, although we plan to continue to do that, too," laughed American Motors Chairman Paul Tippett as he announced plans for a joint venture that will soon see the Chinese building Jeeps.

What AMC says is the largest industrial joint venture in the Republic of China was signed last week in Beijing's Great Hall of the People. By it, AMC purchased for $8 million in cash and $8 million in technological expertise a 31.6-percent interest in Beijing Jeep Corp., producer of four-wheel-drive civilian vehicles.

The new venture also brings AMC into one of the largest potential 4x4 markets, the Far East, which so far has been monopolized by the Japanese makers.

"The fact that there aren't any passenger-car ventures there has occurred to us," Tippett said. (He doesn't count the Volkswagen project, which is assembling kits as training for a tentative 1988 startup of production, if the joint venture is finalized.)

Tippett stressed that AMC has patience concerning the possibility of auto assembly in the People's Republic of China.

• The 4x4 plant will be AMC's biggest operation outside North America.

Better than 100,000 4x4 vehicles are sold in the Far East each year, and the market has been growing 10 percent a year, according to AMC.

It hopes to break the Japanese grip on the area by combining the 60-cent-an-hour labor costs of the Beijing Automotive Works, which is being acquired by the joint venture, with improvements in product and productivity.

"We expect to be fully competitive with the Japanese," Tippett said in a briefing before signing the accord last week.

AMC Vice President of International Operations Tod O. Clare, who was one of AMC's chief negotiators during the four-year-long discussions with the Chinese, will tell the Automotive News World Congress this July about the experience.

For his part, Tippett said the Chinese plant is already operating at a profit. The results will show up in a small way on the AMC balance sheet, "but it's not going to give us $10 a share the first year," he said.

AMC is committed to reinvesting its profits in the venture until it owns 49 percent of the company. The government is the other investor.

Auto analyst Arthur Davis, of Prescott, Ball & Turben, said the move is a logical one for AMC, which finds its U. S. 4x4 market has matured. But he said the success of the new XJ Jeep line and the continued strength of the Alliance in the home market are much more important to the No. 4 auto maker's health.

After all, AMC sells more Jeeps in the U. S. in three good months than it will sell Beijing Jeeps in a year.

Beijing Automotive Works now produces only 20,000 vehicles a year. AMC hopes to at

BMW 318i

Jim Pfeque

German maker refines its hottest model

BMW's new 318i model goes on sale today (May 9) at the company's 400 U. S. dealerships. The car is slightly shorter and wider than the top-selling 320i model it replaces. Subtly refined styling, an improved 1.8-liter engine and a new rear suspension are among the features. Story and another photo on Page 13.

Ad agency named, executives appointed, 'angel' revealed

Bricklin's structure taking shape

By John A. Russell
New York Staff Writer

NEW YORK. — Details on the organization of International Automobile Importers, Inc., were revealed last week as the company prepares to import the Bertone X 1/9 and the Pininfarina Spider to the U. S.

Malcolm Bricklin, the company's chairman, made a series of announcements about the structure and philosophy of the company in an interview last week with Automotive News, including:

1. The appointment of several executives, including Carl (Hap) Hirsh, president of Thermo Guard, Inc., and a longtime business associate of Bricklin's, as vice chairman.

2. Appointing Berenter, Greenhouse & Elgort, of New York, as advertising agency for the $7 million to $10 million account.

3. The warranty structure, including repayment methods to dealers.

4. Various product improvements on the cars.

5. And revealing for the first time that Bud Koffman, a longtime associate of Bricklin's, was the major source of financing for the project, though Bricklin would not disclose the amount.

Bricklin explained that he is the majority stockholder of the privately owned company, which is held by Bricklin Industries, his company.

Financial backing for the operation was initially obtained from Koffman, who backed Bricklin when he started Subaru of America.

• Bricklin has already signed one distributor, John Bednarik, a former Subaru distributor in Maryland, who has also been named to the board of directors. Both Bricklin and Bednarik explained the purpose of his appointment to the board would be to provide distributor input.

His distributorship will include Delaware, Maryland, the District of Columbia, Virginia, West Virginia and North and South Carolina.

Territories have been established for eight distributors. The cutoff point will be a line drawn from North Dakota to Texas, Bricklin noted, following through with his previously announced intention of not launching any operations on the West Coast until later this year.

As for the distributors, they will operate under the same system Bricklin established at Subaru of America, which includes letters of credit to IAI, Inc. Bricklin said that he is requiring the distributors to provide $5.5 million.

The eventual goal will be 10 distributors, with 10 service schools and 10 parts warehouses at the distributor levels, he said.

While dealers have not been signed, since this will be a responsibility of the distributor, Bricklin did say that several key appointments have been made to build a dealer network.

An associate of Hirsch's, Robert Huggins, was named vice president of dealer development. He will assist Hirsch in helping the dealers and distributors set up their operations.

Hirsch said that the appointments of Huggins and himself emphasize the new company's philosophy.

In many companies, Hirsch said, "people who make the decisions that affect the dealer have never sold a car." Both he and Huggins are grounded in retail, and he noted that the company is "gearing all our effort on that level."

Hirsch said he and Bricklin agreed that it was necessary to

GM disputes charge of defect in rear axles

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — General Motors last week issued a strong objection to an initial determination by the NHTSA that a safety defect exists in the rear axles of as many as 5.3 million 1978-80 GM mid-sized cars and sporty trucks.

The vehicles involved are Chevrolet Malibu, Monte Carlo and El Camino, Pontiac LeMans and Grand Prix, Oldsmobile Cutlass and Cutlass Supreme, Buick Century and Regal and GMC Caballero.

A recall, which GM insists is not necessary, would cost GM $125 million.

GM said that projections are that only three in one million of the vehicles would be involved in injury accidents for the rest of their vehicle lives because of axle separation. Those 16 accidents would be minor, GM said, and so far there have been no deaths.

Over the next 10 years — using axle disengagement so far and average driving speed — GM said it would expect incidents to range from a low of 0.06 per million hours of operation to a high of 0.09 per million hours of operation.

In other words, GM told the NHTSA hearing, there is only one one-hundredth of one percent chance of those 11 accidents in which 16 persons suffered minor injuries happening again while those 5.3 million vehicles are on the road.

The hearing concerned the Good Friday and April Fool's Day (April 1) unexpected announcement by NHTSA head Raymond A. Peck of physical separation of axle and wheel assembly that could be "catastrophic . . ."

And while this is true theoretically — an out of control car hitting a car or going down an embankment — it is also true that with the millions of miles of operation and millions of hours driving so far, there have been only 16 minor injuries.

GM is asking NHTSA to rescind that initial finding of a safety defect. GM lined up a

breaking news

U. S. new-car stock dips to 41 days

DETROIT. — The domestic auto industry opened May with a lean 41-day supply of new U. S.-built cars, down from 55½ days April 1 and a 66-day stockpile on May 1 last year. The industry had 1,191,285 new cars in inventory, down from 1,235,313 a month earlier and 1,260,633 a year earlier. The lower May 1 supply is due to both a cut in the unit count and a higher sales rate.

GM to delay '84 C-cars

DETROIT.—General Motors' downsized C-cars for 1984 will be delayed beyond the normal introduction time, Chairman Roger B. Smith said last week. Buick Electra, Oldsmobile 98 and Cadillac will appear "after October," Smith told the press prior to speaking to the Adcraft Club of Detroit.

Japanese production and exports decline again

TOKYO.—Japanese vehicle production and exports declined in fiscal 1982 for the second year in a row, according to reports published here. In the fiscal year ended March 31, output dropped to 10,790,090 cars and trucks, down 2.9

Confirmation is unanimous

Ruckelshaus vows a 'clean' EPA

WASHINGTON. — The EPA of William Ruckelshaus will be an agency above suspicion, President Reagan's choice to succeed ousted administrator Anne Burford told a Senate confirmation panel last week.

"There will be no 'hit lists.' There will be no big-P political decisions and there will be no 'sweetheart deals,'" said Ruckelshaus, the man who originally organized the EPA. He testified before the Senate Environment and Public Works Committee.

But, he said, neither will there necessarily be a swaying from the Reagan Administration's efforts toward deregulation.

"The letter and spirit of the laws EPA is chartered to enforce will be enforced faithfully," Ruckelshaus said, "but in those instances where I think it appropriate, I will recommend changes."

In two days of testimony before the committee that has major oversight responsibility for nearly every environmental law on the books, Ruckelshaus never swayed from that basic message.

And while certain senators were not entirely comfortable with it, confirmation for the man who resigned from the Nixon administration rather than fire Watergate prosecutor Archibald Cox seemed a certainty. Indeed, at press time, the committee was voting unanimously for his confirmation.

Ruckelshaus takes over an agency that is by all accounts in disarray and one in which morale has been damaged by the management style and philosophical bent of an administration that placed ideology and allegiance to its deregulation goals before professional experience or managerial skills.

He told the Senate committee he was daily being "swamped" by offers of help from former EPA officials and that he felt sure the agency would soon again warrant the public confidence it had in the first 10 years of its existence.

Ruckelshaus said he had been assured by President Reagan that he will have complete autonomy to do his job but that he also recognized that he is a member of the Administration.

Pressed by Chairman Robert Stafford, Vermont Republican, over the autonomy issue, Ruckelshaus said, "There are some lines over which I will not step," adding, though, that he had been assured that such a situation would not arise.

Ruckelshaus said he would not report to Interior Secretary James Watt, the chairman of the Cabinet Council on Natural Resources, as former administrator Burford did, and he reassured the committee that, if need existed, he could see the President "within 24 hours."

Ruckelshaus said he was divesting himself of all his corporate interests and that he would disqualify himself in all instances where his former corporate involvement might sway his decision.

That likely assures that the new administrator will not have the final word on heavy-duty truck emission standards now pending before EPA, standards that by mandate of the Clean Air Act require a 90 percent reduction from baseline HC and CO emissions.

That would mean expensive catalyst systems on all gasoline trucks.

Ruckelshaus was a director of Cummins Engine Co., a major producer of heavy-duty engines. He was a vice president of the Weyerhaeuser forest products company before being tapped for the EPA post.

Robot roots

Because robots are used to build Dodge Rampage pickups, the front-wheel drive truck was used for a demonstration of a new walking machine. Pictured here is the 370-pound Odex I, built by Odetics, Anaheim, Calif. During the demonstration, the robot walked off the bed of the Rampage and lifted the rear of the truck off the ground while rotating it around the room.

Detroit area wracked by spring storm

Hail damages 2,500 new vehicles

By Roger Rowand
Engineering Editor

Mother Nature was kind to Detroit-area auto dealers in the winter of 1982-83, but she kicked them in the slats this spring.

The boot came in the form of a hailstorm of the century that damaged some 2,500 new cars and trucks to the tune of about $1,750 each. Dimpled hoods and deck lids accounted for most of the damage.

Dealers in hard-hit suburban Ferndale contemplated a Hail Sale. A Detroit dealer near that town said he would shun such a sale as counterproductive.

Mike Howell, the dealer at Auto Village Volvo in Ferndale, said damage at his store was heavy. The hoods and deck lids on almost all the damaged cars will require replacement, he said.

The Hail Sale would be for as-is cars priced at a discount, Howell said.

"This is the worst damage from hail I've ever seen," said Jack McInerney, vice president of Northland Chrysler-Plymouth in Oak Park.

Just down the street, Ted Karr, sales manager at Dexter Chevrolet, surveyed some of his deal's 200 damaged new and used cars as they were being checked by Motors Insurance Corp. (MIC) claims personnel.

"I think MIC will help, but what the extent of that help will be I don't know," Karr said.

"I don't like the idea of selling them as is. Would you want to go about getting people into the buying mood and then sell them a damaged car? I don't think so.

"Also, in a few days we'd have people coming in looking at cars and asking, 'Are these the damaged cars?'"

A cheerful note could be detected easily as Russ Shelton, vice president and general manager of Shelton Pontiac-Buick, Rochester, discussed the storm. He liked the reaction of his insurance company, Universal Underwriters, of Kansas City.

"They settled within 24 hours. We came to an agreement as to the approximate damage to each car and they gave us the check," Shelton said.

The 164 new and used units in inventory when the storm hit without warning were damaged. They will be sold as is or with disclaimers, he said.

MIC was involved as it provides coverage for cars being floorplanned by GM dealers through General Motors Acceptance Corp. It provides dealership coverage — including that for hail damage to non-new cars — jointly with Fireman's Fund Insurance Cos.

Also, it covers retail customers, particularly GM employes.

MIC brought teams of claims people to Detroit, set up claims centers, including a drive-in claim area at the GM Technical Center in Warren, and made technical repair specialists available.

G. Sheldon Barquist, vice president of MIC, said, "Dealers need this kind of thing tended to promptly. They've got a lot of money tied up in those cars. After 55 years in the business, MIC treats it as routine."

DEAC's '82 contributions rank No. 9 at $917,295

WASHINGTON. — The Dealers Election Action Committee barely made the Top Ten list of contributors to federal candidates in the 1982 campaigns, according to the Federal Election Commission.

Figures released last week by the commission showed DEAC contributed $917,295 to federal candidates, to rank No. 9 on the list of big spenders. Heading the list was the Realtors Political Action Committee, listed as spending $2,115,135. The American Medical Assn. PAC was second, with $1,737,090, followed by the UAW-V-CAP, with $1,623,947.

Others ranking ahead of DEAC were PACs of the Machinists, National Education Assn., National Assn. of Home Builders, Associated Milk Producers and American Bankers Assn.

In a classification of PACs of trade / membership / health organizations, DEAC ranked sixth in money-raising, sixth in overall spending and fifth in contributions to federal candidates. DEAC raised $1,167,395 and spent $1,202,475. Its contribution to federal candidates, as listed above, was $917,295.

All told, the election commission reported, PACs contributed $83.1 million to 1982 congressional races, compared with $55.2 million given just two years earlier.

In addition to contributions, PACs spent $6.3 million to advocate defeat or election of candidates without any consultation with or cooperation of the candidates and another $6 million to political party committees.

Trihawk is unique convertible

The Trihawk is a two-seat three-wheeler built by Hawk Vehicles, Dana Point, Calif. Power comes from a 1.3-liter Citroen horizontally opposed air-cooled engine driving the front wheels through a five-speed transmission. The fiberglass-bodied vehicle rides on a 98-inch wheelbase and weighs 1,380 pounds. A convertible top and side curtains are standard equipment.

No major dealership damage in California earthquake

COALINGA, Calif.—The two new-car dealerships in this Central California town suffered nothing more than minor damage in the severe earthquake that struck last week.

In fact, business reportedly picked up in the wake of the quake as victims sought repair parts for damaged cars or brought in insurance checks to dicker for replacement vehicles.

Keller Chevrolet reported some structural damage to the dealership building and broken windows, but no cars were damaged.

At Larry McLeod Ford, there was only window damage. Again, no cars suffered damage.

A spokesman for Keller said the dealership has had "lots of traffic" since the quake. Many insurance companies, he said, sent reps to Coalinga to pay off on the spot. Recipients immediately entered the new-car market.

Dave Simmons, of the Insurance Information Institute, said many autos in the city were damaged by falling bricks. Such damage is covered by comprehensive insurance for the car owner. Damage at the dealerships is not covered unless the insurance policy explicitly mentions earthquake damage, Simmons said.

Earthquake coverage is "quite expensive," Simmons said, estimating that no more than 5 percent of Coalinga's 7,000 residents carried such coverage.

The quake leveled some 20 commercial buildings and damaged 150 others. Roads were buckled and split. Many of the 2,500 oil wells in the area were extensively damaged.

The quake was rated at 6.5 on the Richter scale, and was followed by aftershocks rated at 4.4. A rating of 6.0 will cause severe damage and 7.0 is "major." The famed San Francisco earthquake of 1906 was rated at 8.3.

Dealer adds Jaguar

BALTIMORE. — Matt Fenton, president and owner of Chesapeake Cadillac, has added Jaguar. The dealership, which will be the exclusive metropolitan Baltimore facility for Jaguar sales and service, is now called Chesapeake Cadillac/Jaguar.

U. S. cars climb 16 pct.; imports, 8 pct.

Domestics pace April sales gain

By Jenny L. King
Staff Writer

The April new-car market continued to improve compared with 1982 sales levels as dealers of both domestics and imports reported increases during the month.

Sales of North American-built passenger cars climbed 16.30 percent for the month. They were up in each of April's 10-day periods and have been up in nine of the 12 periods so far this year.

Import sales were up 8.03 percent in April but claimed a smaller share of the total—24.03 percent vs. 25.90 percent last year — because buyers were more active in the domestics market where low-rate financing was readily available.

In April, domestic sales shot up 16.30 percent, to 579,911 from 498,630 in 1982. It was the second best month to date in 1983, down 3.40 percent from March's 600,303. Import sales numbered 183,464, up 8.03 percent from 169,833 in 1982. Combined sales were up 14.20 percent in April, to 763,375 from 668,463.

Domestic sales for the first four months of 1983 climbed 7.24 percent, to 2,036,833 from 1,899,320. Imports were up to 770,712 from 712,763, an increase of 8.13 percent. Combined sales through the end of April were up 7.48 percent, to 2,807,545 from 2,612,083.

As sales of domestic products showed signs of life once again this year, the imports' share of the market has dwindled. In January, it was 30.69 percent, slipping to 29.64 percent in February, 26.86 percent in March and 24.03 percent in April.

• Sales ranged from good to strong for all the U. S. auto makers except Volkswagen of America. While American Motors reported a 132.47-percent sales increase in April, VWoA was down 31.29 percent.

AMC, again buoyed by Renault Alliance sales, which were two out of three for American Motors last month, soared to 19,518 from 8,396 a year earlier. VWoA dropped to 6,725 from 9,787.

General Motors was up 15.37 percent, to 354,804 from 307,531. Ford's gain was a more modest one, up 3.05 percent, to 117,282 from 113,815. Chrysler Corp. was up 32.58 percent, to 78,355 from 59,101. Honda sales of Ohio-produced Accords numbered 3,227 units in April.

GM earned 61.18 percent of the domestic market, down slightly from 61.68 percent in April a year ago. Ford slipped to 20.22 percent from 22.83 percent. Chrysler was up 1.66 percentage points, to 13.51 percent from 11.85 percent. AMC had 3.37 percent, up from 1.68 percent; VWoA dropped to 1.16 percent from 1.96 percent, and Honda had 0.56 percent this year, none a year ago.

With 26 selling days in the month both this year and last, the daily rate climbed 16.30 percent, to 22,304 from 19,178.

• Most of the U. S. makes had good news to report in April. Buick announced record sales for the month, and Cadillac was up for the eighth consecutive month compared with the previous year's sales.

Chrysler enjoyed the biggest single gain, up 61.67 percent, to 24,314 from 15,039 last year. Plymouth was up 12.80 percent, Dodge was up 33.11 percent and Imperial was down 20.14 percent.

At Ford Motor Co., Ford was up 1.05 percent, Mercury was up 10.23 percent and Lincoln slipped back 4.41 percent.

Buick was up 26.08 percent to its April best of 80,646 from 63,965 in 1982. Cadillac was up 19.99 percent, Chevrolet was up 12.12 percent, Oldsmobile was up 16.31 percent and Pontiac was up 3.02 percent.

At American Motors, AMC products were down 28.43 percent, to 6,009 from 8,396, while Renault Alliance weighed in at 13,509 sales in its first April on the market. VWoA was down 31.29 percent, to 6,725 from 9,787. Honda had 3,227 this April vs. no sales of U.S.-built cars a year earlier.

Import sales continued strong

Continued on Page 74, Col. 3

EPA considers exceptions to its emission regulations

WASHINGTON.—Under EPA proposals, General Motors' Cadillac limousine would be exempted from all-altitude emission control requirements for the 1984 model year and provisions would be made for permitting the sale of special high-ratio rear axles in designated high-altitude areas.

EPA thinks the Cadillac exemption would have very little, if any, environmental impact, since only about 50 limos are sold in high-altitude areas each year.

The agency also thinks that allowing the rear-axle change for the 1984 model year and beyond makes sense, because there would be no environmental impact since nearly 70 percent of vehicles sold at high altitude are equipped with numerically high rear axles to compensate for power loss.

Also, certifying such vehicles for both high and low-altitude emissions would likely make them too expensive to produce.

EPA issued the proposals in line with a notice that it is extending the comment period for its proposed rulemaking on the Clean Air Act requirement that all light-duty vehicles meet statutory emission standards in 1984 and beyond regardless of altitude.

Within this rulemaking, the agency has proposed that all light-duty vehicles must comply with the requirement commencing at 4,000 feet but that compliance tests be conducted only in Denver, and that certain low-powered vehicles be exempted from the requirements. Comments on all three proposals are due May 31.

Successful press conference

Lee Iacocca, Chrysler Corp. chairman, ended his Dallas press conference in the Fairmont Hotel by selling a luxury sedan to Peter F. Baekkelund, right, general manager of the hotel.

breaking news

Continued from Page 1

percent from a year earlier. Exports totaled 5,593,833, a decline of 4.5 percent. Sales in the home market were a bright spot, rising 3.2 percent to a record 5,334,071 cars and trucks.

Mitsubishi Motors realigns at the top

TOKYO.—Toyoo Tate has been named president of Mitsubishi Motors Corp., succeeding Teruo Tojo, who will become chairman. Tojo succeeds Tomio Kubo, who will serve as counsellor. The new presidency of Mitsubishi Motors Sales Co. has been assumed by Toshiharu Tanaka, formerly vice president of Mitsubishi Heavy Industries.

Subaru ready to introduce two turbos

NEW YORK.—Subaru of America plans to introduce two turbocharged models by next month, and for 1984 the company intends to offer its on-demand four-wheel-drive system throughout the model lineup. First turbo models will be the BRAT and the station wagon.

News roundup

Citibank sees late-1983 upturn for heavies

NEW YORK.—Truck sales in 1983 should reach 2.8 million, compared with 2.6 million last year, according to the Citibank Economic Forecast Service. Heavy trucks (Classes 6-8) will remain depressed with the business equipment spending cycle, which is expected to improve in late 1983, Citibank said.

Eaton earnings drop

CLEVELAND. — Eaton Corp. announced first-quarter earnings of $8 million (28 cents a share), down 62 percent from the $21 million income reported in the first quarter of 1982. Sales for the most recent period were $613 million, a decline of 8.2 percent.

Eaton to consolidate axle, brake divisions

CLEVELAND.—Eaton Corp. will consolidate its axle and brake divisions into a single operation, with the loss of about 200 jobs. The axle division headquarters here will be closed, but the 50 to 70 employes will move to Galesburg, Mich., where the new combined division will be based. The move will be made by the end of the year, officials said. The Galesburg facility, just east of Kalamazoo, now houses headquarters of Eaton's Brake and Transmission divisions. The consolidation is part of the firm's effort to restructure its truck components business, officials said.

AM General to get extra $3.5 million

WASHINGTON.—The Department of Defense announced it has increased by $3.58 million the amount being paid to AM General for production of the M939 five-ton technical truck. The contract was awarded in 1981.

GM to salute valedictorians

DETROIT.—General Motors is saluting the cream of the high-school graduating crop again this year via public service TV spots in June. GM's "Best of the Class of '83" salute to valedictorians in 50 states is cost-shared with local TV stations. N. W. Ayer, Detroit, handles.

Major ad push due for new Audi 5000

TROY, Mich.—Porsche-Audi will launch its new Audi 5000 successor in early June, using interrelated ad themes such as "Europe's car of the year" and "Form is function" to dramatize aerodynamics, mileage and interior quiet. The expensive campaign uses network TV (major sporting events, etc.), spot TV and extensive print, including news weeklies, financial, auto enthusiast and special-interest books, plus multi-media dealer support. Doyle Dane Bernbach handles the account.

Wharton downgrades auto estimates

PHILADELPHIA. — Wharton Econometric Forecasting Associates has downgraded its auto sales estimates for the second half of 1983 and all of 1984. Wharton now says sales will total 9.2 million, instead of 9.5 million, in 1983, and 10.6 million, instead of 10.7 million, in 1984. Its forecast for 1985 is unchanged at 10.6 million.

Penske Corp. plans to own half of Hertz Penske

PARSIPPANY, N. J.—Penske Corp., which increased its ownership in Hertz Penske Truck Leasing, Inc., to 42 percent as of Jan. 1, 1983, plans to increase its interest to 50 percent as of June 30. Hertz Penske, one of the nation's largest truck rental and leasing companies, operates a national system of more than 575 locations.

Ford, Japanese end talks on Rouge Steel

DEARBORN.—Ford Motor Co. and Nippon Kokan K.K., of Japan, have ended discussions on the purchase of equity in Ford's Rouge Steel Co. The Japanese firm has been negotiating on behalf of a consortium of Japanese companies. According to Ford, the discussions were called off because labor issues could not be resolved to the satisfaction of the Japanese. Ford and the UAW will meet to try and find a way to keep the mill in full operation, the union said.

Fiat prepares Regata for fall intro

MILAN.—The new Fiat Regata is being groomed for its domestic launch next September. It is about 140 inches long and weighs about 1,980 pounds. Three engines—1.3, 1.5 and 1.6-liter—will be offered. Fiat also is said to be working on a turbocharged version of the Fiat Uno.

31.79 pct. of February registrations

Import share is record for month

By Jenny L. King
Staff Writer

Registrations of new imported cars in February were up 10.37 percent compared with 1982 and amounted to a record share of the U. S. market for the month.

R. L. Polk & Co. reported February import registrations of 180,789 this year, up from 163,804 in 1982. Import market penetration climbed to 31.79 percent from 30.01 percent. February penetration was down slightly from 32.09 percent in January, and the total was down 5.36 percent from 191,038 the first month of this year.

Year-to-date import registrations totaled 371,827, up 15.22 percent from 322,698 in 1982. Import market penetration was 31.95 percent through Feb. 28, up from 30.59 percent for the comparable period a year earlier.

Of the major importers, the biggest, Toyota, was down 1.86 percentage points in February, to 21.26 percent from 23.12 percent of the import market. Nissan was up a generous 2.81 percentage points, to 20.85 percent from 18.04 percent. Third-place Honda dropped an equal amount, 2.80 percentage points, to 15.12 percent from 17.92 percent.

Mazda climbed into fourth place in ranking and Subaru slipped into fifth. Volkswagen gave up its year-ago sixth place to Renault Alliance; VW was seventh, Volvo was eighth, Mercedes was ninth, and BMW was 10th. Audi slipped from the top 10, which captured 89.31 percent of the import market. A year earlier, the top 10 had 89.89 percent of the market.

For the first two months of 1983, Nissan, Mazda, Volvo and BMW improved their standings compared with '82 market shares. Nissan was up 2.12 percentage points, Mazda was up 0.47 percentage points, Volvo was up 0.04 percentage points and BMW was up 0.39 percentage points.

On the year-to-date chart, VW dropped from fourth to sixth place while Mazda climbed from sixth into fourth. Alliance snapped up seventh place, pushing Volvo into eighth and Mercedes into ninth. BMW was 10th and Audi was absorbed into "others."

The top 10 imports represented 89.24 percent of the market this year compared with 90.00 percent in 1982.

Japanese-built cars claimed 74.44 percent of the February import market, down from 78.28 percent a year ago. German cars represented 9.82 percent, down from 10.13 percent in '82.

A new category, United States, which includes the U. S.-built Renault Alliance and Volkswagen Rabbit, has been added by R. L. Polk in 1983.

Imported - truck registrations dropped 10.05 percent this February, to 29,231 from 32,497 last year. Truck totals for the month compared with February, 1982, were:

	Feb., 1983	Feb., 1982
Toyota	9,901	9,823
Nissan	6,409	6,778
Mazda	4,174	——
Ford Courier	2,218	3,877
Chevrolet LUV	——	2,508
Others	6,529	9,511
TOTAL	29,231	32,497

Registrations for the first two months of this year were up 2.32 percent over 1982 levels, climbing to 66,455 compared with 64,949. Breakout by maker was as follows:

	2 Mos., 1983	2 Mos., 1982
Toyota	21,675	19,504
Nissan	16,521	14,390
Mazda	7,949	——
Ford Courier	6,420	7,528
Dodge Ram 50	——	5,256
Others	13,890	18,271
TOTAL	66,455	64,949

California market sparkles

T-bird capturing imports, Ford says

By Marjorie Sorge

Ford Motor Co.'s new Thunderbird is stealing some of the import thunder in California, according to Ford marketing studies.

According to the company, sales of the redesigned T-bird are up 338 percent in California, compared with last year's sales of the old T-bird. Nationally, sales have increased 182 percent. The T-bird and its sister car, the Mercury Cougar, went on sale Feb. 17.

In California, 75 percent of the sales have been conquest sales, and one-fourth of those were import conquests, according to Ray A. Ablondi, Ford Motor director of marketing research.

The T-bird is geared toward import prospects while the Cougar is aimed at domestic buyers, chiefly General Motors, Ablondi said.

Ford is predicting sales of 161,000 T-birds nationally for the 1983 calendar year, up 274 percent from last year's 43,000. Sales of Cougar are forecast at 98,000, up 512 percent from 16,000. In California, Cougar sales were up 326 percent, compared with 324 percent nationally.

Ford conducted three studies on the new offerings. According to Ablondi, in the first study, the initial buyers rated the T-bird and Cougar at 8.4 on a 10-point scale in overall satisfaction, quality and value for the money. That is the highest rating of any new Ford product or competitive domestic line in the last three years, he said.

In the second study, mid-specialty-car owners and prospects rated the T-bird and Cougar as equal to or slightly better than GM's Cutlass Supreme, Monte Carlo and Pontiac 6000 STE; the Toyota Supra and the Audi Coupe.

A third study allowed 2,000 people in San Francisco, Los Angeles and Kansas City to compare 21 Ford models with 25 competing models (three-fourths foreign and one-fourth domestic). Those invited to see the cars were chosen by Ford after filling out an 8-page questionnaire. According to Albondi, the group was chosen "in enemy territory" and there weren't "many Ford lovers."

Those viewing the cars were impressed with quality improvements, he said.

The studies also showed that in overall styling, the T-bird and Cougar were equal to GM's Camaro and Firebird showing an average of 8.9 on a 10-point scale, Ablondi said.

VWoA and parent report 1982 loss, sales declines

WOLFSBURG, West Germany.—The Volkswagen Group reported a loss of 300 million marks, approximately $126.6 million, for 1982. The loss was attributable to its subsidiaries; the firm made money on its German automotive operations.

Volkswagen of America's loss was put at 347.3 million marks, approximately $146 million, on sales of $2.5 billion, compared with a 1981 profit of about $600,000 on sales of $3.3 billion.

Last year's group loss compared to a 1981 profit of 136 million marks.

VW unit sales in 1982 were 2.12 million units, down 7 percent from the prior year's 2.28 million. Group sales — including nonautomotive subsidiaries — totaled about $15.8 billion, off 1.2 percent from 1981.

Domestics pace April gain in new-car sales

Continued from Page 8

—they just weren't as strong as the U.S. competition. Fourteen of the major importers reported sales increases for April and several had any-month highs.

Jaguar, Saab and Volvo said they had their best monthly sales for any month. Saab claimed its 13th consecutive record-setting month in April.

Nissan reported a sales gain of 44.51 percent, to 41,111 from 28,448 last year, beating out Toyota for first place among the imports. Toyota sales slipped 3.50 percent, to 39,530 from 40,964. Honda import sales were down 11.83 percent, to 27,276 from 30,936, although when U.S.-built Accords are added, total for the company was 30,503 this April.

Mazda, Subaru, Mercedes, Volkswagen and Alfa Romeo were among the winners for the month, also Porsche, which was up 76.10 percent. BMW, Audi, Peugeot and Renault were down from year-ago levels.

U.S. intermediates claimed the largest single portion of the total market in April, with 27.18 percent. Imports were second with 24.03 percent, followed by compacts at 15.77 percent, standards at 14.38 percent, subcompacts at 13.03 percent and luxury models at 5.61 percent.

A year ago, the market-class spectrum included: Intermediates at 20.83 percent; imports at 25.90 percent; compacts at 20.42 percent; standards at 9.21 percent; subcompacts at 18.86 percent, and luxury models at 4.78 percent.

The domestics-only market this April showed intermediates best at 35.77 percent, followed by compacts at 20.76 percent, standards at 18.93 percent, subcompacts at 17.16 percent and luxury cars at 7.38 percent.

April 21-30 domestic sales were up 12.49 percent, to 230,848 from 205,208 a year ago. The daily selling rate climbed to 25,650 from 22,801. Annualized sales based on the final 10 days of the month were 6.3 million.

For the period, GM was up 4.92 percent, Ford was up 2.58 percent, Chrysler was up 63.60 percent, AMC was up 155.60 percent and Volkswagen was off 22.62 percent.

GM earned 58.99 percent of the market, Ford had 20.92 percent, Chrysler had 14.55 percent, AMC had 3.32 percent, VW had 1.61 percent and Honda had 0.61 percent.

*—AMC does not issue a nameplate breakdown for 10-day periods. † Estimate

Month's production totals 560,892

April car output tops '82 by 18 pct.

By Patricia Hoffman
Staff Writer

Domestic auto production last month fell slightly short of the March total, but output soared 18.28 percent above last year's April build.

During April, the makers turned out 560,892 cars, up from 474,222 built in the comparable 1982 month.

Breakdown for the month by company was: General Motors, 59.24 percent; Ford Motor, 22.73 percent; Chrysler Corp., 13.67 percent; American Motors, 2.32 percent; Volkswagen of America, 1.44 percent and Honda, 0.60 percent.

Downtime at five assembly points pulled last week's estimated car output down to 127,738 units, a 6.31 percent decline from the previous week's 136,340. Output, however, was 4.52 percent above last year's 122,214 units.

So far this year, the manufacturers have assembled 2,169,787 units, a 27.59 percent gain from 1,700,587 built in the comparable period last year.

GM's Wilmington point, Ford's Dearborn, Metuchen and San Jose facilities and VWoA's Westmoreland plant were idle last week (May 2) to trim overstocked inventories. Operations at all five plants are slated to resume today (May 9).

The GM Willow Run plant returned last week following downtime for inventory control.

Ford's Kansas City point began production of the new Tempo and Topaz models. Assembly of the Fairmont and Zephyr models ended there March 14. Ford targeted 387 Tempo and 203 Topaz units during the first week of output.

The GM Linden plant upped assembly of the Riviera, Eldorado, Seville and Toronado models from 45 units an hour to 50 units an hour on each of two eight-hour shifts.

Saturday overtime was scheduled last week at GM's Arlington, Baltimore, Doraville, Fairfax, Flint and Lansing facilities.

The GM Detroit plant operated 24 minutes of overtime on each of two shifts Monday through Friday last week.

Also working daily overtime were Ford's Chicago, Lorain and St. Louis facilities, plus Chrysler's Belvidere, Jefferson, Newark and St. Louis points.

California court fines dealer for selling uncertified cars

SAN DIEGO.—An auto dealer here was fined $20,000 for selling 23 vehicles which were not California-certified, in violation of state emission control regulations.

Merit Motors, of National City, and owner Dale Richfield were ordered to pay the civil penalties, which are four times the $5,000 profit realized from the sales.

Judge Alfred Lord noted that nine of the cars were sold after the dealer was warned by the California Air Resources Board of the alleged violations.

According to CARB, the cars were supplied to the dealership by a dealer in New Mexico. The vehicles involved were diesel Cadillacs and Oldsmobiles, as well as two Datsun pickup trucks, and the sales allegedly took place during 1979 and 1980.

CARB said that the investigation into Merit's activities was prompted by complaints from other dealers.

Judge Lord said the $20,000 settlement was intended as a deterrent to other dealers who may be considering the sale of illegal cars, and to reimburse the state for the cost of the investigation.

Any future sales of illegal cars by Merit Motors could lead to a contempt of court citation for violating a permanent injunction issued by the judge.

Welsh is 25

Harold H. Welsh, right, Welsh Chevrolet, Inc., Coopersburg, Pa., receives a 25-year dealer plaque from H. C. (Pat) Marshall, Chevrolet's Philadelphia zone manager.

April in Canada: Car output rises, but trucks slip

While the Canadian auto makers wrapped up April production with the highest total for that month since 1978, truck output stumbled to the lowest point in seven years.

Last month, the car manufacturers assembled 99,588 units, up 15.0 percent from 86,601 built in April of last year. It was the most for that month since 106,210 cars were completed in 1978 and the most for any month since June of 1981 when the makers assembled 101,432 autos.

The truck makers built 48,557 units in April, down 6.70 percent from 52,046 completed in the comparable 1982 month. Although up from the March total, truck output was the lowest for April since 1976 when 47,572 trucks were assembled.

Downtime last week (May 2) at Ford Motor's St. Thomas car assembly point pulled the estimated car output down to 22,196 units, a 12.52 percent drop from the previous week's 25,373. Output, however, rose 5.11 percent from 21,116 units built in the comparable 1982 period.

Year-to-date, the car manufacturers have assembled 348,573 units, an 11.30 percent gain from last year's 313,182.

Truck output last week reached 12,304 units, a 1.88 percent gain from the previous week's 12,077, but down 5.07 percent from 12,961 units built the same week last year.

The Ford St. Thomas facility was idle last week for inventory control. All other car and truck plants were reported working.

Truck production for April shows gain over 1982

The domestic truck makers produced 189,085 units in April, down from the March total but up 2.52 percent from 184,434 built in the comparable 1982 month. It was the most for April since 256,090 trucks were assembled in 1979.

Overtime schedules offset downtime at two assembly points last week, boosting the estimated output to 49,808 units, a 1.01 percent gain from the prior week's 49,309. Output was also up 12.81 percent from 44,152 units built in the comparable 1982 period.

So far this year, the manufacturers have finished 750,294 units, a 10.35 percent gain from last year's 679,897.

Volkswagen of America's Westmoreland facility and International Harvester's Fort Wayne point were both idle last week (May 2) for inventory control. Operations are slated to resume today (May 9).

Daily overtime was scheduled last week at Ford Motor's Kansas City, Norfolk, Michigan and Twin Cities plants, plus Chrysler Corp.'s Belvidere and Warren facilities. Warren also operated six days last week.

The General Motors Janesville and St. Louis points worked Saturday.

Isuzu's Impulse

American version of Piazza

Impulse, American Isuzu's version of the Piazza, rides on a 96-inch wheelbase and is powered by an electronically fuel-injected 2.0-liter four-cylinder engine. The Impulse's overall length is 172.6 inches and curb weight is 2,714 ibs. The car has a suggested retail price of $9,998. Story on Page 3.

Domestic new-car supply dips again; now 53 days

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory continued to decline during April and the industry opened May with a 53-day supply, down a bit from 55½ days a month earlier.

The May 1 domestic new-car stockpile totaled 1,193,296, down from 1,235,313 on April 1. A year ago, the industry had 1,260,633 new cars in inventory May 1, a 66-day supply.

Table on Page 58.

The import inventory totaled 294,703 new cars May 1, a 40-day supply, up from 287,408 a month earlier, a 35-day stockpile.

The total domestic and import inventory May 1 was 1,487,999 cars, a 48-day supply. The total on April 1 was 1,522,721 cars, a 50-day stockpile.

• Chrysler Corp. and Ford Motor Co. increased their supplies during April, while the other domestic makers trimmed theirs.

General Motors opened May with a 49-day supply, down from 54 days a month earlier. Shortest was the hot new Corvette, which dropped from 80 days April 1 to 23½ days May 1. Also very short were Oldsmobile's standard and intermediate lines.

Ford Motor Co. boosted its stock to a 64-day supply from 56½ days a month earlier.

Chrysler Corp. had a 59-day supply, up from 57 days a month earlier, with stocks of its various lines in good balance.

American Motors found itself in the unusual position of having the shortest supply of the Detroit-based makers at 45-days, mainly because of the Alliance.

Volkswagen of America had a 91½-day supply of U. S.-built Rabbits, down from 95 days a month earlier, and a 75-day stock of imported VW models. American Honda has not built up much of a stock of U. S.-built cars and had only a 16-day supply to augment its lean 30½-day inventory of imported cars.

The May 1 domestic inventory was divided this way: GM, 55.89 percent; Ford Motor Co., 24.12 percent; Chrysler Corp., 14.99 percent; American Motors, 2.85 percent; VWoA, 1.98 percent, and American Honda, 0.17 percent.

A month earlier, the domestic inventory was divided as follows: GM, 57.01 percent; Ford Motor Co., 23.68 percent; Chrysler Corp., 14.06 percent; AMC, 3.19 percent; VWoA, 1.86 percent, and American Honda, 0.20 percent.

• By size class, the domestic inventory was very well balanced, with only 12 days' difference between the highest and lowest segments.

The industry had a 59-day supply of subcompacts May 1, down from 66 days a month earlier, and a 49-day stock of compacts, down from 60 days.

Intermediates were in 50-day supply, down from 55 days a month earlier, while the industry had a 47-day stockpile of standards, up slightly from 46 days a month earlier, and a 53-day supply of luxury cars, up from 51 days.

The May 1 domestic inventory was divided this way by market segment: Subcompact, 19.76 percent; compact, 19.90 percent; intermediate, 35.53 percent; standard, 17.25 percent, and luxury, 7.56 percent.

A month earlier, the inventory was divided as follows: Subcompact, 18.91 percent; compact, 22.81 percent; intermediate, 35.08 percent; standard, 16.17

Import stocks climb to 40 days on May 1

By Richard A. Wright
Assistant Managing Editor

The imported new-car inventory climbed during April to a still-lean 40-day supply, up from 35 days. Paradoxically, the increase was due mainly to lower sales brought about by inventory shortages.

The inventory of new imported cars May 1 totaled 294,703, up from 287,408 a month earlier.

The inventory of new imported pickup trucks totaled 91,961 May 1, a 78-day supply, compared with 92,727 on April 1, a 61-day stock.

The combined imported-car-and-truck inventory May 1 totaled 386,664, a 45½-day supply, compared with 380,135, a 39-day stock a month earlier.

The inventory increase during April was achieved by the Japanese lines, as both the West German and other European categories trimmed their inventories. Japanese-built makes were in 35-day supply, still lean but up from a shortage-riddled 30-day stock a month earlier.

Japanese cars and their May 1 days-supply figures were: Toyota, 20; Honda, 30½; Subaru, 33; Nissan, 37; Mazda, 51; Isuzu, 77½; Mitsubishi, 121. In addition, Chrysler Corp. had a 103-day supply of Mitsubishi-built cars, including Dodge Colt, 86; Plymouth Colt, 94; Dodge Challenger, 125; and Plymouth Sapporo, 126.

• The stockpile of West German cars stood at 50 days May 1, off slightly from 51 days a month earlier.

West German nameplates and their May 1 days-supply figures were: Porsche, 17; Mercedes-Benz, 25; BMW, 52; Volkswagen, 75, and Audi, 83. VW also had a 91½-day supply of U. S.-built Rabbits in stock May 1.

Days-supply figures of other European lines May 1 were: Jaguar, 18½; Saab, 35; Volvo, 38; Alfa Romeo, 91; Peugeot, 139½; Renault, 182, and Fiat/Lancia, 530.

Days-supply figures for imported pickup trucks May 1 were: Toyota, 56; Nissan, 70½; Mazda, 94; Chrysler Corp./Mitsubishi, 102; Isuzu, 127, and Mitsubishi, 131.

Service Index rises after one-month drop

By Francis J. Gawronski
Service Editor

New-car dealers' service and parts business rebounded in March after recording its first decline in 23 months in February.

According to the Automotive News Service Index, dealers' shop business in March amounted to 103.9 percent of the volume registered in the same month a year ago.

Business in February dipped to 99.5 percent of the volume reported in the same month of 1982.

With the exception of repair orders written, which trailed March, 1982, volume by 2.6 percent, all indicators that make up the Service Index made impressive gains in March. In February, repair orders were 3.7 percent below the year-ago figure.

Table on Page 2.

The indicator showing the best improvement in March was sales of all parts and accessories, up 7.2 percent over last year.

Gross profit on all labor, parts and accessory sales, the most important indicator from the dealers' viewpoint, increased 6.8 percent, while shop parts sales (those used on both customer-paid and warranty work) were up 4.8 percent. Total labor sales (customer-paid and warranty) were up 1.5 percent in March.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

For the first quarter of 1983, dealers' shop volume amounted to 103.9 percent of the business recorded for the corresponding period of 1982.

Leading indicator in the first quarter was gross profit, up 5.1 percent, followed by shop parts sales which advanced 4.9 percent ahead of 1982, and labor sales, up 4.5 percent.

Sales of all parts and accessories climbed 2.3 percent for the year-to-date period, while repair orders written dipped 1.8 percent.

Chrysler retreats on proposal to cancel warrants

WASHINGTON. — Gerald Greenwald, Chrysler vice chairman, told the Chrysler Loan Guarantee Board last week that the company is withdrawing its proposal regarding cancellation of warrants held by the government to purchase Chrysler stock.

"Reaction to news reports about the request to cancel the warrants has obscured our primary intention, which is to meet our obligations and pay off our federally guaranteed loans," Greenwald said.

Chrysler's request for cancellation had kicked up a storm. When seeking federal loan guarantees, Chrysler had given the government warrants to purchase 14.4 million shares of Chrysler common stock at $13 a share. The stock then was selling at about $5 a share. It closed at $25.50 last Thursday.

The Loan Guarantee Board had given no indication that it planned to exercise the option, and a Treasury Department spokesman said the board hadn't even thought about it.

Chrysler felt that if the options were exercised, it would

DeLorean document seal to be lifted

LOS ANGELES.—An order sealing documents relating to the drug trafficking case involving John Z. DeLorean was declared unconstitutional by a three-judge appeals panel here. Attorneys for both sides had until last Friday to file motions for sealing specific documents already filed under Judge Robert M. Takasugi's order.

Canadians to discuss Japanese export curbs

OTTAWA. — Government officials of Japan and Canada are scheduled to meet here May 19-20 to determine the quantity for Japanese voluntary restraint on car exports to Canada under an agreement reached in 1981. Similar talks in Tokyo in April ended in disagreement.

Iacocca urges 'Marshall Plan for America'

HILLSDALE, Mich. — Chrysler Chairman Lee Iacocca proposed "a Marshall Plan for America" in his commencement address at Hillsdale College. Urging a National Development Bank modeled on the Reconstruction Finance Corp. of the Great Depression, he said such a bank could provide capital to help rebuild outmoded plants, help with conversions to meet new government regulations and help restructure debt.

Ford on verge of sales surge, Caldwell says

By Kathleen Hamilton
Financial Editor

Saying he believes Ford Motor Co. — if not the entire U. S. market — is "on the threshhold of a breakout in auto sales," Chairman Philip Caldwell said Ford third-quarter production is slated at a four-year high, running 40 percent ahead of last year.

Second-quarter auto production at Ford will be up 8 percent from a year ago, as Ford attempts to grab a bigger market share with its compact Tempo/Topaz, which will be introduced this month.

Caldwell also told the annual shareholders' meeting in Detroit that he believes the Ford dealer network has "bottomed out," and that Ford will embark on a major effort to add dealers in new population centers.

Caldwell told reporters after the meeting that preliminary figures from Europe make Ford officials confident they are the sales leader in the first quarter.

Asked about Canada, where Chrysler just stole the No. 2 spot from Ford, President Donald E. Petersen said he was confident the Tempo and Topaz will allow Ford to regain its position.

In the U. S. this year, Ford has lost one percentage point of the market because it has stopped production of its Fairmont and Zephyr. Together, they had accounted for less than 3 percent of the market. Ford hopes to do much better with the new front-drive replacements — at least 4.5 percent of the market, according to a Ford spokesman.

• Ford has reduced its breakeven point by one-third, Caldwell said. He said he expects the tractor operations to return to profitability, but refused to say when.

His optimism on an auto sales turnaround is based on a University of Michigan public opinion survey in which almost 70 percent of respondents said this is a good time to buy a car, Caldwell said.

That optimism, along with the aging fleet and the increased spending capacity of many households, could trigger an industrywide upturn, he said.

When asked about the need to continue price incentives, he said Ford will be competitive,

Delay in GM C-cars tied to quality testing

The delay in the introduction of the new-for-1984 General Motors C-cars (AUTOMOTIVE NEWS, May 9) is tied to an extensive quality-testing program.

The cars are the Oldsmobile 98, the Buick Electra and the Cadillac deVille. They will be front-wheel-drive for the first time, and they are expected to go on sale in January, although the debut could be as late as March.

GM had originally planned to introduce the cars at the beginning of the '84 model year next fall. No new date has been set for full production to begin.

Until the new C-cars are ready, GM will continue production of the current rear-wheel-drive 98, Electra and deVille models.

The new front-drive cars will be built at two new GM plants in Lake Orion, Mich. (near Pontiac) and Wentzville, Mo. (near St. Louis).

The late introduction and the corresponding late start of production will hold up the callback and hiring of workers to staff the new plants.

The quality-testing program was disclosed last week by GM President F. James McDonald in an address to the Saginaw Club in Saginaw, Mich.

He called it a "product verification" program and said GM will schedule production of the new FWD luxury cars "only after we're satisfied with the results of special verification testing for the early production runs of these new cars."

He added, "We're taking this step to assure the highest quality for our customers."

McDonald said, "More preproduction cars will be built for this program than ever before in our history. The build of cars for that purpose is going slower than we had hoped. That, and making sure the new parts meet design intent, have led to this decision.

"To put it simply," he said, "the product will tell us when it is ready."

AMC appoints Guptill to head sales in U.S.

SOUTHFIELD, Mich. — Peter G. Guptill has been appointed general manager—U. S. sales for American Motors.

He will be responsible for the AMC - Renault - Jeep dealer organization, AMC's national sales headquarters staff and regional and zone offices.

Peter G. Guptill

Guptill, 41, takes over the duties of Robert Schwartz, who resigned last February as vice president of North American sales.

Guptill has been AMC's Western regional sales manager since 1981. He joined the company in 1971 as distribution manager in the New York zone.

He has served as assistant zone manager in Washington, national distribution manager in the central office and manager of the Dallas, Los Angeles and Chicago zones.

He was named director of Renault integration in 1979, director of sales operations in 1980 and Western regional manager in 1981.

Atlantic City show set

ATLANTIC CITY, — The American International Automobile Show will be held here Sept. 1-5.

Long list of standard equipment

Isuzu Impulse coupe has sticker of $9,998

By Matt DeLorenzo
Los Angeles Reporter

LAS VEGAS. — Impulse, American Isuzu's version of the Piazza, was introduced here with a suggested retail price of $9,998.

The 2+2 sport coupe, which has been on sale in Japan for about a year, will be sold through American Isuzu's 250 full-line dealerships. The company has an additional 150 truck-only points.

Styled by Giorgetto Giugiaro, Impulse made its first appearance as the prototype "Ace of Clubs" during the 1979 Geneva Auto Show. Riding on a 96-inch wheelbase, the Impulse features flush-mounted glass and rounded wedge body style for aerodynamics.

The vehicle is powered by an electronically fuel-injected 2.0-liter 4-cylinder engine that produces 90 HP at 5,000 RPM and torque of 108 pounds-feet at 3,000 RPM. The standard transmission is a 5-speed manual with fifth gear overdrive.

Overall length of the Impulse is 172.6 inches and curb weight is 2,714 pounds.

The suspension is independent in front with a three-link torque tube in the rear and the system uses coil springs and gas-filled shocks at all four corners. The car is equipped with rack-and-pinion steering, four-wheel disk brakes and a 15.2-gallon fuel tank.

• The Impulse carries a long list of standard equipment such as automatic air conditioning, cruise control, AM/FM stereo, power door locks, tilt steering with a memory function, rear window defogger, rear window wiper/washer and an electronic multi-display monitor that incorporates a clock / stopwatch, trip odometer, fuel gauge in precise gallons and fuel economy MPG indicator.

Another interior feature is the unique satellite pod mounting of the switches used primarily by the driver. The pods, which are adjustable to fit the driver's reach, are mounted on either side of the steering wheel and allow fingertip control without having to remove hands from the wheel.

The left pod has cruise control switches, turn signals, rear defogger and hazard light buttons and controls for the headlamps. The right pod includes controls for the air conditioning system, rear wiper/washer, front wiper/washer and fan.

All four seats in the Impulse are adjustable, with the driver's seat having the most adjustments. The 60/40 split fold-down rear seats can be reclined 20 degrees in four steps.

• There are only three options available on the Impulse—automatic transmission at $380, a graphic equalizer, also $380, and a cassette deck at $190.

The car has an EPA fuel-economy rating of 24 MPG city, 36 MPG highway for manual-equipped versions and 24 city, 32 highway with the automatic.

As a result of import restrictions, American Isuzu is limited to a total of 16,800 cars per year and has been selling only one series—the I-Mark. Although the company will continue to sell that car, Impulse will take the lion's share of Isuzu's allotment.

Company officials said they plan to import between 1,000 and 1,200 a month, which would amount to between 12,000 and 14,400 of the cars Isuzu can bring in during the third year of the restraints.

The Impulse represents a transition to the future for Isuzu and the car's in-house designation, JR tells a lot more about this car's significance than company officials would care to admit.

As a sporty 2+2, it will be American Isuzu's specialty car, with the company's version of GM's J-car (called the JJ by Isuzu executives) as the company's family-size car. The R-car, which GM will sell in this country along with American Isuzu, will be a world-class small car.

A rough drawing of Isuzu's family of cars was shown and in it was the R-car, which had many styling cues taken from the Impulse.

At Smyrna plant

Nissan's U. S. Job One due June 16

WASHINGTON. — June 16 is the day the first U. S.-made Nissan light truck will come off the line in Smyrna, Tenn. Marvin T. Runyon, president of Nissan Motor Mfg. Corp., USA, made the announcement at a meeting of the Society of American Business and Economic Writers here.

The day Runyon spoke—May 9—marked the start of work on the first 40 trucks destined for American consumers. Over the next six weeks, they will move along gradually to make sure that all systems are in order and that the quality of each job is A-OK.

The total investment of $660 million at Smyrna is the largest ever made by a Japanese firm in the U. S. Full production, set for 1984, should find 2,000 employes and an annual payroll of some $90 million.

Production will be up to 10,000 trucks monthly on one shift or about 60 units an hour — or one a minute, Runyon said. The plant uses 219 robots in body assembly, stamping and paint operations.

Nissan Motor Mfg. has spent $63 million on training, and it has sent 375 U. S. workers to Japan for training at Nissan and equipment supplier plants there.

• But Runyon stressed that while high technology is important, he believes the "people factor" is of "equal, if not greater, importance." In that regard, he said, it is important to teach basic job skills, to broaden the job by teaching multiskills and to create an atmosphere that encourages ideas and teaches problem solving.

Tennessee helped by committing $7 million for pre-employment training. Nissan could choose its 2,000 employes from more than 120,000 applications.

Instead of "literally hundreds of narrow stratified job classifications for hourly workers," Nissan has just four for "technicians"—manufacturing, maintenance, quality assurance and materials handling.

Employes are encouraged to take cross-training in skills, and Nissan is starting a "pay-for-skills program which compensates technicians who learn new skills."

Instead of the 10 to 12 levels of management, Nissan has just five and this encouraged open communications, Runyon said. All employes eat in the same cafeteria, 90 percent wear the free wearing apparel although they need not, and workers see news releases before they appear in a paper.

By fall, Nissan plans to have involvement circles, similar to Japanese Quality Circles.

U.S. eyes attempt to dump standards on MPG for cars

WASHINGTON. — With General Motors and Ford Motor Co. warning that they likely will fail to meet federal fuel-economy requirements not only for 1983 but for 1984 and 1985 as well, the Reagan Administration is considering a move to repeal the law mandating that the passenger-car fleets of the major auto makers meet an average of 27.5 MPG by 1985.

According to documents obtained by AUTOMOTIVE NEWS, that is one of three options spelled out by Christopher DeMuth, director of the Presidential Task Force on Regulatory Relief, in a memo to the Vice President and Cabinet leaders.

The two other options are to "do nothing" or have NHTSA scale back the requirement to 26 MPG or less.

DeMuth suggested, however, that neither of these appear to be very workable. "Doing nothing" effectively forces Ford and GM to take on what will be a "controversial" task and the "rollback option," exposes the Administration to a possible legislative veto and other "legal risks."

The fuel-economy law allows NHTSA to lower the standard to 26 MPG, or even below 26 MPG subject to a one-house veto, provided that it can be shown that the new limit represents the "maximum feasible" fuel economy that is "economically practicable."

Because some makers already exceed the maximum requirement of 27.5 MPG, lowering the standard could be "legally risky," according to DeMuth.

Congress enacted the Energy Policy and Conservation Act in 1975 during the fuel crisis that stemmed from the Arab oil embargo. The rationale was that yearly corporate average fuel economy (CAFE) standards were needed to depress fuel consumption and that it was in the national interest to be self-sufficient in energy.

In effect, since 1978 the requirements have been largely superfluous because small, fuel-efficient cars have enjoyed immense popularity.

But in 1983, for the first time, GM and Ford will not meet the standards because neither expects to sell a sufficient number of small cars. Fortunately for both companies, they have fuel-economy credits "in the bank" to offset their anticipated shortfalls from the 26-MPG standard of 1983.

The standard for 1984 will be 27 MPG, however, and for 1985 and beyond it will be 27.5 MPG.

With the resurgence of big cars, both GM and Ford have now written the Administration to warn that neither will meet the fuel-economy standard in 1984 or 1985. Both will have insufficient credits to offset their shortfalls, hence they will be subject to a fine of $5 per vehicle sold per one-tenth of a mile per gallon below CAFE.

The only way they appear able to avoid the penalties for these years and beyond is to increase the relative prices of larger models substantially in order to discourage demand for them, DeMuth said in his memo.

• Clearly, "the standards are wholly unjustified and can only retard the recovery of the domestic auto industry," DeMuth said. He noted that oil prices have been decontrolled and now reflect the scarcity value of oil that was intended by the fuel-economy laws.

"The Administration has been successful in eliminating a host of energy efficiency standards for housing and appliances during the past two years, and these reforms have been politically and economically beneficial," DeMuth said. "A strong pro-consumer, pro-employment case can be made for repeal of the CAFE program."

But he warned: "We need to prepare a detailed analysis of the price, energy use and employment effects of continuing or repealing the program before any legislative change is proposed."

Ironically, one of the other reasons DeMuth cites for rejecting the other two options is Chrysler Corp.

Chrysler has managed to bring itself back from the brink of bankruptcy with a fleet of smaller cars that has also allowed it to easily exceed the fuel economy requirements of the CAFE law and to continue to do so into the future.

DeMuth said Chrysler would oppose any change in the CAFE requirements for competitive reasons.

Bridgestone, Mickey Mouse and Tokyo

Disneyland has come to Tokyo, and Bridgestone Tire Co., Ltd., is hosting the park's Grand Circuit Raceway. During the inaugural raceway ride, Bridgestone Chairman Kanichiro Ishibashi, driving left front car, and President Kunio Hattori, driving second car in left row, race against Mickey Mouse.

75 pct. in black now, up from 50 pct. last year, Stempel says

More Chevy dealers making profit

By Joseph Bohn
Marketing Editor

PONTIAC. — Chevrolet dealers are returning to profitability, but still have a ways to go, Robert Stempel, general manager, noted at a press conference held in conjunction with General Motors' annual Silverdome Sale.

Some 13 North Oakland County GM dealers are sponsoring a May 19-21 Silverdome Sale, the fourth such event, and hope to exceed the previous record 827 vehicles sold in 1980.

Russell M. Shelton, GM Silverdome Sale chairman and owner of Shelton Pontiac-Buick in Rochester, Mich., said 705 vehicles were sold in 1981 and 619 in 1982.

F. James McDonald, GM president, added that with upturns in the economy, he felt the sale would set a record this year.

Stempel said that approximately 75 percent of Chevrolet dealers are now profitable on a "month-to-month" basis, up from roughly half last year.

"As most will tell you, they're not back to where they feel they ought to be" but the trend is encouraging, he said.

"They want to get their volume up, their profits from new cars. Most dealers have been having to earn more from service, used cars" and other avenues to compensate for the lack of new-car profit, he added.

In the past three months, he said, Chevrolet has begun hearing from "true investors" interested in a franchise — "people who see more opportunity to make money in a Chevrolet franchise than in the money market or by just re-investing."

Although the division isn't interested in expanding its franchise network, it does have a turnover of dealer points to fill, Stempel added.

His primary concern, he said, is the health of his 5,250 dealers.

Meanwhile, Chevrolet has added 120,000 more vehicles to its June-August production schedules than originally planned.

"We've added additional shifts on Cavalier, Celebrity — additional capacity at Van Nuys (Camaro), van, Blazer and S-10," Stempel said.

"The only thing left to add would be another shift at Framingham on Celebrity, and we're looking at possible ways to add Cavalier capacity. We still have unused capacity on Chevettes," he said.

Although Chevrolet could add another line to Corvette production, its hottest car, it doesn't seem interested in it now.

"We're right on our game plan (with Corvette)," Stempel said. "It was intended to start on one shift. We're currently running 120-125 a day. We've built 6,200 and sold 4,200, which is a good turnover rate.

"Right now, we want to stay with that plan. My philosophy is I'd like to have just one less than ultimate demand. There's far more interest than actual buying response," which, Stempel views as a help in selling Camaro and Cavalier.

Hollenback honored as dealer of year

SPOKANE. — Mark K. Hollenback, owner of Dishman Dodge and Sherwin-Hollenback Volkswagen, received the Washington State Automobile Dealers Assn.'s 1982-83 Dealer of the Year Award.

In addition to Hollenback's contributions to the automobile industry, the award recognizes quality of his dealership operations and his community service.

Moran heads plan to assemble KD units in Florida

Japan's Hino to enter U.S. heavy-truck market

By Jack Walsh
Truck Editor

Japan's anticipated invasion of the big-truck market in the U. S. will get under way this year or early in 1984 with the introduction of three mid-range diesel models carrying the Hino nameplate.

Lisa Enterprises, Inc., Deerfield, Fla., will complete the assembly of the knocked-down Hino trucks in the Jacksonville area and market them through dealers still to be appointed.

Eiji Ishizu, vice president, Hino Motors U.S.A., New York, said the knocked-down units will be imported through his company, a subsidiary of Hino Motors, Ltd., Japan's top big-truck manufacturer. Hino is part of the Toyota Group.

Lisa Enterprises is the parent firm of Southeast Toyota Distributors, which is headed by Jim Moran, long-time auto/truck dealer and distributor. A separate company will be established by Lisa to assemble and market the Hino trucks.

Ishizu said the three Classes 6 and 7 models will be straight trucks with gross-vehicle weight ratings ranging from 25,500 pounds to 32,000 pounds.

The trucks will be powered by Hino in-line six-cylinder diesels rated at 160, 180 and 200 HP, with a six-speed manual transmission. Some time after their introduction, according to Ishizu, an Allison automatic transmission will be available.

Some parts for the Hino trucks — such as fuel tanks, batteries and tires — will be sourced in the U. S., he said.

Production is scheduled to begin in November, and 500 units are expected to be assembled in 1984, Ishizu noted. Output is targeted at 800 units in 1985, with about 5,000 a year possible after 1986, he added.

Initially, Ishizu indicated, the trucks will be distributed mainly in the Southeast, with wider availability due as production and marketing capabilities of the new Lisa company develop.

The likelihood of Japan's move into the nation's big-truck market was emphasized by John A. Curcio, president, Mack Trucks, Inc., in his keynote address at NADA's American Truck Dealers convention last month in Boston.

He cited an interview in a newspaper in Canada, where Hino trucks now are marketed, and noted that the head of Hino said Japanese big-truck producers can't expect any further growth in worldwide sales unless they enter the U. S. market.

"The four major truck makers in Japan have virtually exhausted the rest of the international market with only the U. S. left untouched," the Hino executive was quoted as saying.

Built to break records

This custom built Mazda RX-7 has been designed to go faster than 200 MPH and shatter two land-speed records in the Bonneville National Speed Trials for classes E and C Grand Touring cars. The car will have 13B rotary engines, which displace 80 cubic inches, for its attempts at record setting.

SERVICE INDEX
103.9*

	March., '83 vs. March., '82	3 mos., '83 vs. 3 mos., '82
Gross Profit on All Labor and P&A Sales	+ 6.8%	+ 5.1%
Repair Orders Written	− 2.6%	− 1.8%
Total Labor Sales (Customer & Warranty)	+ 1.5%	+ 4.5%
Shop Parts Sales (Customer & Warranty)	+ 4.8%	+ 4.9%
Sales of All Parts and P&A	+ 7.2%	+ 2.3%

*—Survey by Automotive News shows that dealers' service and parts business in March, 1983, was 103.9 percent of business in March, 1982. Service business in the three months of 1983 was 103.9 percent of business in the corresponding period in 1982.

Story on Page One

But Hahn reiterates its commitment

VW predicts more red ink in U.S.

By Jim Plegue
Staff Writer

ISERNHAGEN, West Germany. — Volkswagen does not expect to break even on its U. S. operations this year, despite cost-cutting measures and an improvement in sales of imported models, said Carl Hahn, chairman of the board of management, Volkswagenwerk AG.

But Hahn reiterated VW's commitment to building cars in the U. S. during an informal discussion with U. S. journalists on a tour of German manufacturing facilities.

"I'm a full supporter of the manufacturing investment," said Hahn, who headed Volkswagen of America from 1959 to 1964, a period of explosive growth. "I think no one recognizes what will happen to national-content policies. We all have seen what happened in the motorcycle segment.

"So I feel we should fully exploit all opportunities, the potential of both tables that we play on — the import table and the local manufacturing table. And we should not neglect the one or the other."

• Sales of imported Volkswagen models in the U. S. have increased 32 percent during the first three months of the year and VW has reduced its operating expenses by selling its Sterling Heights (Mich.) plant to Chrysler Corp. and by cutting costs at Detroit headquarters and at the Westmoreland (Pa.) assembly plant.

These moves will not be enough to put Volkswagen of America into black ink this year, Hahn said, though losses will be reduced. The U. S. economy must further improve, he said, with lower interest rates and a balanced federal budget.

Although VWoA's Rabbit GTI has been a runaway success, Hahn was less than optimistic about increased sales of the other Rabbit models built at Westmoreland.

"We are not yet in a very encouraging trend as far as the rest of the Rabbit production is concerned but I'm hopeful that we will also turn this around," he said. "The standard-size automobile is back in demand and, as long as the real interest rate is as high as it is, we will have to wait for an upturn in the economy-minded segment of the market."

The GTI, Hahn said, is an indication of the marketing direction VW will pursue to reinstate itself in the U. S. market.

• "We see very clearly that the American public is more and more sophisticated in terms of the automobile," he said. "On the one hand, there is a large segment of buyers willing to spend between $20,000 and $60,000 on a car, yet I think there must be a lot of Americans (who can't afford to spend that much) but with the same tastes.

"This is the segment of the market we will go after: The man who can afford the $6,000 to $12,000 automobile and who wants good German engineering and good handling and other characteristics.

"We feel we have a couple things coming into the marketplace that will again permit us to work our way to where we once were in the American marketplace and, more important, in terms of the American consumer's heart. We lost contact with the heart of the American consumer."

One of those new models will be the four-wheel-drive Audi 80 (the 4000 in the U. S.), which debuts at the Frankfurt Auto Show later this year and will eventually be introduced in the U. S.

• Hahn said VW has no intention of re-introducing the Beetle into the U. S, despite the warm reception it has received on the U. S. West Coast where the Mexican-built Bug is being sold by an independent firm.

Hahn called the GM - Toyota joint car-production venture "a bad deal for the United States, in terms of labor and in terms of the competitiveness of the marketplace."

Rabbit is prize for best proposal

Robert F. Sturm, second from left, an electrician at Volkswagen Westmoreland, is shown with his wife, Leslie, and plant officials as he takes possession of a 1983 diesel LS Rabbit, grand prize in the plant's 1982 Employe Participation Sweepstakes. Also pictured, from right, are Plant Manager Donn J. Viola, General Superintendent—Plant Engineering Harold W. Wiegel and Superintendent — Plant Engineering A. T. Kljun.

Gains by Chrysler, AMC boost sales for early May

New-car sales for May 1-10 were boosted 6.34 percent above their year-ago level by powerful thrusts from Chrysler Corp. and American Motors.

Domestic sales climbed to 168,524 from 158,483 last year. It was the best early May since 1979 when the total was 246,680, and the fifth consecutive 10-day increase.

All the U. S. auto makers were up except General Motors, which missed its 1982 total by 1.61 percent. American Motors released a sales estimate of 5,100, up 96.15 percent from 2,600 a year earlier. Chrysler Corp. jumped 41.65 percent, to 22,737 from 16,052.

Ford Motor Co. sales were up 1.50 percent, to 35,574 from 35,048. General Motors dealers retailed 102,302 new cars in the period, down 1.61 percent from 103,977. Volkswagen of America reported sales of 1,811 Rabbits, up 124.69 percent from 806, and Honda Accord sales were estimated at 1,000.

GM earned 60.70 percent of the market for the period, down considerably from 65.61 percent in 1982. Ford slipped to 21.11 percent from 22.11 percent. Chrysler climbed to 13.49 percent from 10.13 percent. AMC held 3.03 percent, up from 1.64 percent. VWoA picked up 1.07 percent, up from 0.51 percent, and Honda had 0.60 percent this year compared with no share in 1982.

Seven domestic makes enjoyed sales gains: Plymouth was up 62.56 percent, Chrysler was up 34.76 percent, Dodge was up 26.14 percent, Mercury was up 11.35 percent, Cadillac was up 20.84 percent, Oldsmobile was up 20.51 percent and VWoA was up 124.69 percent. Honda and Renault Alliance were not on the market at this time in 1982.

Down were: Imperial, off 56.10 percent; Ford, off 0.72 percent; Lincoln, off 7.39 percent; Buick, off 9.31 percent; Chevrolet, off 10.96 percent; Pontiac, off 8.32 percent, and AMC, off 30.77 percent.

The most recent daily selling rate averaged 21,066, up 6.34 percent from 19,810 a year ago. Annualized sales based on May 1-10 performance were moving at a rate of 6.8 million. Year-to-date sales totaled 2,205,357, up 7.17 percent from 2,057,803 last year.

News roundup

Nissan to have auto parts firm in Europe

TOKYO.—Nissan Motor Co., Ltd., will establish Nissan Motor Parts Centre (Europe), a wholly owned subsidiary, in Amsterdam. This facility will function as the European center for the marketing and distribution of spare parts and supplies to distributors in Europe. Nissan said the 12.4 - acre warehouse will be the largest such facility owned by any Japanese auto manufacturer in Europe. Operations are scheduled to start in the summer of 1985.

New Chicago cabs to be Chevrolets

CHICAGO.—For the first time since 1947, the two major cab companies here, Checker Taxi Co. and Yellow Cab Co., will be operating taxis not manufactured by Checker Motors Corp., according to Zollie S. Frank, of Chicago's "Z" Frank Chevrolet. The new cabs are 1983 Chevrolet Impalas from Frank's dealership.

DAF eyes U. S. assembly of buses

EINDHOVEN, The Netherlands.—DAF Truck is conducting talks with an unnamed U. S. firm with a view toward assembling DAF buses in the U. S. A decision is expected within several months.

Vauxhall launches Nova 'supermini'

LONDON.—Vauxhall has started selling the Spanish-built Nova in the UK. This is the "supermini" which was launched on the Continent last fall as the Opel Corsa.

AM General gets record Postal Service order

DETROIT.—AM General has been awarded a $38 million contract from the U. S. Postal Service to build 6,400 right-hand-drive postal delivery vehicles. It is the largest postal-service contract ever received by the American Motors subsidiary.

Ford advertising: $387 million in 1982

DETROIT.—Ford Motor spent $387 million in advertising costs in the U. S. in 1982 which, with adjustment for inflation, would equal 1981, officials disclosed at the company's shareholder's meeting. They expected ad expenditures to be up for 1983.

Nissan Stanza 4-door notchback priced at $8,699

CARSON, Calif.—Nissan has introduced its newest U. S. model, a notchback four-door sedan in the Stanza series. With a sticker price of $8,699, the new model is $600 more than the Stanza XE four-door hatchback, previously the most expensive Stanza offering. Like other Stanzas, the new notchback has a 2-liter overhead-cam engine, front-wheel drive and four-wheel independent suspension. Power steering, power windows, power locks and radio are standard on the notchback.

BMW's Radermacher quits R&D post in surprise move

MUNICH. — The man mainly responsible for the design of the latest generation of BMW 3- and 5-series sedans is to leave the company at the end of this year.

The departure of Dr. Karlheinz Radermacher, board member responsible for research and development, comes as a major surprise.

No successor has been named, and no reasons given for the change. BMW says that Radermacher asked the supervisory board to accept his resignation, which it did with reluctance.

The 3- and 5-series cars caused some consternation when they were announced because of their similarity to previous models.

It was a reflection of Radermacher's cautious approach to evolution in styling — an approach not extended to the adoption of electronics in passenger cars.

BMW, more than any company in Europe, has embraced the microprocessor and electronics for use in passenger cars.

The resignation comes a few weeks after someone at BMW leaked the minutes of a board meeting to a West German news magazine.

Der Spiegel made a big splash with the contents — which included a frank discussion about the quality and design of the latest 3-series, launched in Europe at the end of last year.

Despite the conservative changes to these two models, BMW's sales have continued to climb over the past decade. They are clearly models which the customer wants.

The change is expected to herald a new generation of models from BMW which really are different. However, these cannot appear until the late '80s and early '90s, which means that for most of the rest of this decade BMW's product profile will not change a great deal.

Radermacher, 52, joined BMW in October, 1973, from the SKF bearing manufacturer. He joined the board of management in January, 1976.

truck industry news

Duplex crash/truck chassis

Duplex Truck Division, Nolan Co., Midvale, O., has introduced the Model DCT-1500 crash/truck chassis which can be operated in either a two-wheel or four-wheel-drive model. Duplex says the 1,500-gallon capacity chassis meets all of the standards of the National Fire Protection Assn.

Sharp increase in light trucks sets the pace

April sales up 20.4 pct. over 1982

Retail sales of new light trucks in the U. S. rose sharply in April from a year ago, bringing the industry total for the month to an estimated 250,464 units, an increase of 20.4 percent over the year-earlier 208,062.

According to preliminary reports, the nation's franchised dealers and factory outlets sold 235,248 light trucks during the month, 24.3 percent higher than last year's 189,193 units.

April sales of medium trucks were down from the year-earlier month for the first time this year. Dealers sold 3,809 mediums in April, a decline of 4.4 percent from last year's 3,986 units.

But the four-month medium total was 3.3 percent higher than a year ago, 14,262 units versus 13,802.

Through April, light-truck sales totaled 860,610 units, an increase of 6.5 percent over the 807,828 retailed in the like period in 1982.

Heavies were down for both the month and the January-April period. During the month, 11,407 Classes 7 and 8 trucks were retailed, off 23.4 percent from the year-earlier 14,883. The four-month count was 43,725, down 17 percent from last year's 52,702.

• Total industry sales for the first four months climbed to 918,597 units, a gain of 5.1 percent over last year's 874,332.

Compact-truck sales were significantly higher than a year ago for both April and the four months.

During the month, dealers retailed 82,155 small trucks, an increase of 41.9 percent over the year-ago 57,910. Through April, the total of 307,301 units was 26 percent higher than the previous year's 243,887.

Sales of the domestic compacts in April were up 63.6 percent over last year—51,444 versus 31,452—and they accounted for 62.6 percent of the small-truck market.

The import count, including the captive makes, was 30,711 in April, up 16.1 percent over last year's 26,458 units. Sales of captive Ford Courier and Chevrolet LUV continue to dwindle—not one Courier was sold in April and only 641 LUVs were retailed.

Four-month sales of the domestic compacts rose to 176,723 units, an increase of 52.4 percent over the year-earlier 115,-

Table on Page 59.

967. The imports were up only 2.1 percent through April, from 127,920 units in 1982 to 130,578.

The domestic compacts' share of the total this year climbed to 57.5 percent, compared with 47.5 percent a year ago. The imports' share dropped from 52.5 percent in 1982 to 42.5 percent.

In April, Chevrolet regained sales leadership from Ford as dealers retailed 83,538 units, the division's best month this year. The total was 42.8 percent higher than last year's 58,493 units.

Ford dealers sold 73,710 vehicles during the month, down sharply from the 91,844 retailed in March but 2.3 percent higher than the 72,068 units sold in April a year ago.

Chevrolet's four-month sales totaled 293,506 units, about 6,-300 greater than Ford's 287,257. The Chevrolet total through April, however, was 0.2 percent

EPA mulling options on big-truck exhaust

By Roger Rowand
Engineering Editor

ANN ARBOR, Mich. — While forecasting a continuing sharp decline in use of gasoline engines in heavy-duty trucks, the EPA is stepping up its plans to control that air-pollution source.

A staff report being distributed by EPA identifies five routes that might be taken. Those options for hydrocarbon and carbon monoxide control vary sharply in complexity and impact on users of heavy-duty gasoline engine (HDGE) trucks.

In order of increasing toughness, here are those options:

Option 1—Extend the current levels of heavy-duty engine hydrocarbon (HC) and carbon monoxide (CO) control indefinitely.

Option 2—Non-catalyst heavy-duty gasoline engine (HDGE) standards will be in force in 1985, with values of 2.5 HC and 35 CO assumed. Heavy-duty diesel engine (HDDE) control would stay at current levels because they are below those 2.5 HC and 35 CO points.

Option 2 represents the first increment of HC and CO control. It would bring HDGEs down to interim non-catalyst levels while leaving HDDEs at 1983 levels.

Option 3—Non-catalyst HDGE standards are as they are in Option 2 but, in 1985, diesel standards go to statutory levels of 1.3 HC and 15.5 CO.

"Manufacturers already have indicated control of HC emissions to the statutory 1.3 level can be achieved by HDDEs in 1985, so that is the level chosen for this option. CO is not a concern since diesel CO emissions are already well below the statutory levels," EPA said.

• Option 4—This is a split-class approach. HDGE standards would be split by gross vehicle weight (GVW) class. Gasoline-powered trucks in Classes 2 and 3 (less than 14,000 pounds GVW) would meet the statutory standards of 1.3 HC/15.5 CO in 1987/88 requiring catalytic converter control technology. Classes 4 through 8 (greater than 14,000 pounds GVW) would remain at non-catalyst levels of 2.5 HC/35 CO. HDDEs would remain at the statutory level of 1.3 for HC.

In the split-class approach, light-duty catalyst technology would be used up to Class 4. New technology would have to be developed for the larger trucks.

That raises questions of catalyst durability and cost, of course. So, but with a split class, heavy rigs could go with-

48-acre complex in Cleveland sold by White Motor

CLEVELAND. — The last manufacturing property of White Motor Corp. — its 48-acre Cleveland complex — was sold for $925,000 to Anthony J. Asher in a crowded U. S. Bankruptcy courtroom.

There were no other bidders.

White Motor has filed for reorganization under Chapter 11 of Federal Bankruptcy laws, and the plant was ordered sold to pay claims.

Asher said he plans to use the vacant property as an industrial park, but also is exploring other uses.

The property, four miles east of downtown on E. 79th St., has 31 acres under roof and a floor area of 1.9 million square feet. It includes a 140,000-square-foot office building with cafeteria and six storage vaults.

Wallace B. Askins, White Motor chairman, said the firm is retaining an office building and other minor property on the east side of E. 79th St. for the continuation of the corporate entity.

Tech-Trans bought by Bivouac Industries

VANDALIA, Mich. — Bivouac Industries has purchased Tech-Trans, Inc., Bristol, Ind., builder of the Gerring Luxury Van. Scott Chapman, Bivouac president, called the purchase "strictly a financial investment."

"There is no intention for any type of merger or joining the two companies," he said. "Tech-Trans will continue under its present management, utilize its own design concepts, manufacturing facilities and marketing programs."

Brisk trailer demand reported by Fruehauf

By Kathleen Hamilton
Financial Editor

DETROIT. — Inquiries on Fruehauf trailers are at their best level in three to four years, and those inquiries have translated into orders: Fruehauf Corp. is writing more than double the number of several months ago, according to company officials.

The news of the upturn provided a pleasant contrast for Fruehauf executives, reporting to shareholders at the annual meeting here on last year's loss —the first in 24 years for the corporation.

Chairman Robert D. Rowan predicted industrywide trailer sales of 106,000 to 110,000 units in 1983, compared with 97,000 in 1982 and 120,000 in 1981 — even that, a down year.

Cost-cutting measures have reduced Fruehauf's break-even point so low that the company was able to make money on its trailer operations in February when it was producing at only 30 percent of capacity, Rowan said.

• The uncertainty in the market caused by deregulation and changes in size limits has abated, according to Fruehauf officials. They see the new regulations allowing larger trailers and double units as a bonus for their sales in 1983.

Fruehauf also has developed a fleet of trailers with gullwing doors and sliding side doors to supply plants with just-in-time inventory systems, said President Thomas J. Reghanti.

The upturn in orders began about six weeks ago, when Fruehauf introduced 11½-percent financing for trailers, according to Charles P. Jacoby, Fruehauf Division general sales manager. But the upturn continued even after the low-interest loans ended at the end of April, he said.

Purchasers of 48-foot units have provided much of the impetus, he said. The confusion caused by law changes involving double trailers has depressed the common-carrier demand, he added.

• The corporation is expected to begin making money toward the end of the second quarter, and second-half profits are expected to offset first-half losses, Rowan said.

Kelsey-Hayes operations were

IH calls selling below cost vital to itself, dealers

DETROIT. — Price slashing among big-truck manufacturers is rampant in the current slump, but International Harvester has defended its actions as crucial to its own and dealer interests.

Neil A. Springer, Truck Group president, admitted that some International trucks are being sold below cost, but he said it was necessary to maintain its market share and to keep its dealer network strong.

Cost slashes have enabled IH to price its trucks lower than some competitors, he said. Still, IH prices always cover variable costs which are estimated at 80 to 85 percent of the total, he added.

In the first two months of 1983, International medium and heavy-trucks accounted for 27 percent of total registrations, compared with No. 2 Ford's 23 percent.

At the same time a year ago, International's share of the total was 24 percent and Ford had 22 percent.

DATSUN "200 SX" CONVERTIBLES
"FULLY AUTOMATIC CONVERTIBLE TOP"

"AMERICAN CUSTOM COACHWORKS, LTD."
has created and built these sporty convertibles for Datsun dealers. They have proven to be a very "fast selling" and "very profitable" Nissan custom product—the finest quality convertible for '83 Datsun dealer sales. These "showroom traffic builders" are superbly engineered and styled. Base units can be drop shipped to American Custom Coachworks, Ltd. plants or there are some open factory (pool cars) presently in build that are available.

Americans need to drive less, he says

Analyst outlines auto attitude shifts

By A. S. Plotkin
Staff Correspondent

CAMBRIDGE, Mass. — The basic American attitude toward automobiles has undergone a subtle but significant change in recent years.

The oft-stated and obvious observations are that motorists are holding onto their cars much longer, and that the new cars they do buy are smaller and more "functional."

To these trends, transportation analyst K. H. Schaeffer adds that people are driving less, not because they can't afford to, but because they need to drive less.

Schaeffer said that these movements actually began in the early 1970s — before the Arab embargo produced the first major oil shock. And they are trends, he said, that are essentially unaffected by the recent softening of gasoline prices.

Shortly after retiring after 12 years on the staff of the U. S. Transportation Systems Center here, Schaeffer went to Hamburg, Germany, to address a world conference on transport research. Before he left, he discussed his views on the changed American attitude during an interview at his home.

The ownership of a car in the U. S. is "hardly a status symbol any more," Schaeffer said. "Likewise, it is not a status symbol to drive more rather than less, to commute 20 and more miles rather than five or fewer, to shop at a distant mall rather than an equivalent local mall."

An underlying reason, he said, is that the demographics in the suburbs have changed. "We now have the second postwar generation of suburbanites, the maturing of the baby boom," he said. "They can now operate in their own suburban sectors almost exclusively.

"They hardly need to go to shop downtown in the big core city, or to any other suburban section. The suburban clusters are now so homogenized."

Government surveys, Schaeffer said, show "a decline in motor-vehicle usage at the upper income levels."

"In the American society of the 1980s, there are better ways to spend one's time than behind the wheel," he said. "The proverbial Sunday drive of the 1920-1950 era is as dead as the hula hoop.

"A functional vehicle," he continued, "and the ability to drive are necessities, but only in very limited and shrinking circles must the vehicles be new or expensive.

"The vast majority of people appear to be satisfied if the vehicle gives reliable, simple and comfortable private transportation."

But, Schaeffer said, this does

CONGRATULATIONS TO THE DEALER OF THE YEAR FROM THE DIESEL OF THE YEAR.

Rick Warner and his son, Bart C. Warner

1983 TRUCK DEALER OF THE YEAR RICK WARNER TRUCKLAND

SALT LAKE CITY, UTAH.

When *Business Week* magazine and the American Truck Dealers Division of the NADA set about selecting their 1983 Truck Dealer of the Year, they looked for a person with special qualifications.

An outstanding record of truck merchandising. A strong commitment to community service. A career marked by innovation and the highest standards of professionalism.

They found their man in Richard L. (Rick) Warner, a Ford and IVECO dealer in Salt Lake City, Utah.

President of Rick Warner Ford and Rick Warner Truckland, this year's winner has spent the last three decades building his dealership into one of the country's largest. With gross sales for 1983 projected at $90 million, Rick Warner's operation epitomizes the tremendous opportunity available in today's car and truck business.

"I think one reason for our success is our ability to meet almost every truck customer's needs," he says. "IVECO's Z-Range diesels have filled a significant size and GVW gap in the truck market, and we're very excited about the contribution they're making to our bottom line."

Assisted in the management of the dealership by two of his nine children, Bart and Richard, Jr., Rick Warner currently employs 340 people, working in more than 20 distinct operation and profit centers.

And while engineering the growth of his organization, Rick has also compiled a long and distinguished record of community service, with active participation in dozens of business, cultural, civic and religious activities.

We at IVECO are proud to have dealers like Rick Warner selling our diesel trucks, and we heartily congratulate him on his well-deserved award.

For information on joining the growing family of fine IVECO dealers, just call James R. Bostic, President, at **1-215-825-3880.**

IVECO
The diesel truck that pays for itself

EPA mulls options on emissions by big trucks

Continued from Page 16

out catalytic converters.

"This option has the added advantage that in future years it would remove the last large, legitimate source of demand for leaded gasoline at the retail level—Classes 2b and 3 trucks.

"Classes 4 through 8 trucks and buses in large part obtain their fuel from private distribution systems rather than from retail outlets. This would not only directly reduce ambient lead levels by eliminating lead emissions from Class 2b and 3 trucks, but should also result in decreased misfueling in all motor vehicles by reducing the availability of leaded fuel," EPA said.

• The toughest option would reduce standards for all heavy-duty engines to the statutory levels of 1.3 HC and 15.5 CO in 1987-1988.

EPA researchers apparently are wary of the latter option.

The 16-page staff report says:

"Although development work by both vehicle manufacturers and suppliers is continuing, it is important to note that manufacturers continue to maintain that catalysts are not yet technologically feasible or, at least, would be overly expensive in these applications.

"Of course, this option also would essentially eliminate any legitimate need for leaded gasoline."

Factory, dealers promote 'CaliFormula' effort

AMC develops California program

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — A multimedia sales and promotional program geared specifically to the California market has been launched by AMC/Renault.

Called the CaliFormula, the effort ties together diverse elements in the AMC/Renault/Jeep product lines to give the company's dealers a unified identity and more exposure, according to Peter G. Guptill, sales manager-West.

AMC's California penetration has traditionally lagged behind the company's national share, and the many changes that have occurred at AMC since its affiliation with Renault have further blurred its dealers' image here.

However, the product changes in the car line since the marriage have given the firm a unique opportunity to forge a new image among import-conscious Californians.

Guptill said the company really didn't have a car that captured the imagination of California buyers until the Fuego.

"It was the first vehicle introduced by our company that had at least the same, if not greater, acceptance in California as anywhere else," he said.

"That showed us that Californians did not necessarily tune us out," Guptill continued. "It showed they would react, although it was a specialty-type car.

"The Alliance proved that the reaction wasn't a fluke. The same kind of response was engendered," Guptill said of the Alliance debut.

• Taking a cue from the positive reception of these vehicles, Guptill said the field organization, through meetings with dealers, decided a program was needed to give greater exposure to these products, and also to draw on the strength of the Jeep line, which has fared well in the state.

"We needed more advertising and exposure," Guptill said, adding that a traditional dealer-association program wasn't necessarily the answer.

"What may go in Boston and Chicago may not go here," he said. "We need to attack the problem from every side and hit it in different ways. Television is eminently forgettable."

However, a program that ties print ads, 3-D billboards, point of purchase materials, special-event sponsorship and consumer product related promotions to TV spots would stand a better chance of cutting through ad clutter and reinforcing the message.

"We want to come at people from all different angles," Guptill said. "We don't want to approach it piecemeal."

The CaliFormula theme is twofold, according to William C. Carroll, zone manager for California and six other Western states.

First, it gives the dealer an opportunity to package the different products in the line together with the different services within the dealership under one banner.

Second, it lets the consumer know that the dealer has all the ingredients available to make a deal, Carroll said.

"It's basically five parts," Carroll explained. They are quality, wide vehicle selection, competitive prices, parts and services, emphasizing 90 dealers in California and finally, "the CaliFormula Clincher."

"The consumer knows that at any time, there is going to be some sort of program to sweeten the deal," Carroll said. "Right now, it's free soft tops on CJs and 9.9 or 11.9 percent financing on some of our units.

• "The CaliFormula program will have product, merchandising, advertising, showroom displays and public relations events all geared to the theme,'" Guptill added.

"The program was developed by the field organization so the field organization would support it. We wanted it to have the look, feel and flavor of a California program."

Dealers, who put up $500,000 to help launch the program, attended a meeting last month to kick off the effort. Following the meeting, the dealers attended the Long Beach Gran Prix, where Renault was racing.

That financial commitment by the dealers, as well as the money put up by AMC/Renault, "represents the largest corporate and association commitment ever," Carroll said.

"It's a realization that California is the most important state for the sales of our vehicles," he said.

The program will go beyond radio promotions, co-promotions with department stores and soft drink bottlers and shopping mall displays (which are integral elements) by offering specific model changes that will appeal to California tastes, Guptill concluded.

Recognizing that stripes alone do not a California package make, the changes will be substantial, Guptill said. He declined to elaborate.

He did note, however, that "you're not going to fool Californians. They still know and love cars and view them as an extension of their personality. They want more than four wheels and a box."

Dodge's driving champions

Carroll Shelby joins the winners of Dodge's first National Collegiate Driving Championships, held in Daytona Beach during spring break. The winners are, from left, Matthew Allen, University of Toledo, third place; Joe Heinz, St. Ambrose College, first place, and Tom Bonardi, Embry Riddle Aeronautical University, second place. Each student won the use of a Dodge Shelby Charger for a year and a scholarship. Heinz won $5,000, Bonardi received $3,000 and Allen earned $2,000. Some 3,000 students drove in the Solo II-type rally.

Zimmer reports gains, forecasts record '83

POMPANO BEACH, Fla. — Zimmer Corp., announced that earnings for the 16 weeks ended April 16 more than tripled to $516,000 (11 cents a share) from $162,000 (4 cents a share) a year earlier.

Sales rose 19 percent in the period, to $38.52 million. Chairman Paul H. Zimmer, speaking at the firm's annual meeting, forecast record sales and earnings in 1983. The company makes RVs, modular homes and a neoclassic specialty car, Golden Spirit.

Dealer McCune honored as Businessman of Year

NATIONAL CITY, Calif. — Tony McCune, owner of McCune Chrysler-Plymouth here, has been named Businessman of The Year, by the National City Chamber of Commerce.

McCune founded the dealership in 1948. He served on the Chrysler-Plymouth dealer council in 1981 and is a member of the Pacemaker Club, a group of C-P dealers whose annual sales and service performance meets specific goals. He also is a director of the Better Business Bureau of San Diego.

Dealership opens

JEANERETTE, La. — Jacqueline L. Edgar has opened Edgar Chevrolet, Inc., here.

Topaz kickoff

Lincoln-Mercury kicks off Topaz advertising today (May 16) in all major news weeklies plus three buff books that carry a four-page gatefold. Some 21 magazines are on the launch list. Young & Rubicam handles.

'Advanced' features stressed in ads for L-M's Topaz

By Joseph Bohn
Marketing Editor

Lincoln-Mercury begins Topaz advertising in print today (May 16) with four-page gatefolds with the theme, "As advanced as those who will own it."

The strategy, according to John Vanderzee, ad manager, is to position the car as more "enlightened" or advanced in terms of aerodynamic styling, solidity, handling, responsiveness — and new features, such as 2300-cc HSC engine and computer controls.

"This is not a Zephyr replacement," Vanderzee said. "People who love their Zephyrs will probably not care for Topaz. They most likely move into Marquis."

L-M is going after imports as well as domestic competitors like General Motors' X and J-cars, and has a special Western campaign that is different from that in the other states.

It encompasses spot TV and network regional feeds in five Western states and uses a series of six 30-second commercials. Each one details some aspect of the Topaz story — handling, engine, safety, etc.

"What we're saying is we cannot tell you all about the car in 30 seconds. We invite you to call an 800 number for a special 24-page book that really details the car," Vanderzee said.

"The booklet is not a sales brochure. It is a strong piece designed to detail the full story of quality, integrity, etc," he added.

"We found out in our research that if we are ever going to get the people who own or are considering an import, we've got to give them a helluva lot of information about the car."

• In the other 45 states, L-M took a mini documentary approach. It takes viewers back to the early stages of Topaz, with consumers talking about certain things they wanted in the car—then showing how the car was designed, engineered and tested to deliver these things. The signoff is "a more enlightened approach."

All in all, Topaz gets a bigger dollar launch during the six-week introductory period than did the new Cougar during its launch last fall.

There are 21 magazines on the launch list, plus Sunday supplement newspaper (June 5); also heavy TV, which kicks off with "Parade of Stars" on ABC May 22 and "60 Minutes" plus the Tony Awards June 5. These comprise the three major TV specials.

A lot of 30- and 60-second spots will be shuffled into L-M's existing schedule. Topaz shares most of the ad dollars with Cougar during the May/June period, though some additional support continues on other car lines.

A typically equipped Topaz with automatic transmission, power steering, tinted glass and air conditioning will go for about $9,300, according to an L-M spokesman.

A special California package which includes many standard features puts the car at $8,987. L-M has two series of Topaz—a GS and LS series—and expects most of the volume in the lower GS series.

Young & Rubicam handles L-M advertising.

Profit Builders wins damages from copycats

FT. LAUDERDALE, Fla. — Automotive Profit Builders, Inc. (APB), won damages of $392,795 from two former employes who operate a second sales system, One on One, in a Circuit Court suit here.

The ruling by Judge Mel Grossman also enforces an injunction issued in late 1980.

APB, founded and headed by George M. Libin, developed an automobile sales system, sells it to dealers and trains dealership personnel in its use. It is known as the Controlled Track Sales System.

The court, in the earlier suit, found that two former APB employes, Brian Finnegan and Albert DeArellano, founded their own sales system company under the name One on One.

Libin charged that, contrary to a confidentiality agreement signed when the two joined APB, they copied the APB program in setting up One on One.

An injunction was issued Dec. 24, 1980. In May, 1982, Libin found them still marketing a program "virtually identical" to APB's system.

APB then filed its petition for enforcement of the injunction and for contempt. It was that case on which Judge Grossman ruled in favor of APB.

APB was organized by Libin in 1968 and currently has about 300 client dealerships.

California vehicle board elects Cone president

SACRAMENTO. — Allan E. Cone has been elected president of the California New Motor Vehicle Board for 1983.

Florence Post has been named vice president, and Sam W. Jennings continues as executive secretary.

Tempo ads begin May 22; 1983 sales goal is 200,000

Continued from Page 6

upbeat music of "Pick up the Tempo."

There are four commercials, all variations of this scene, being used during the launch period.

TV talks about some of Tempo's technical features, but its real purpose is to introduce the Tempo as a new car and create name awareness, Wagner said.

The technical features will be heavily touted in magazines which encompass a broad run. Wagner noted Ford was using "inside covers, double pages," etc., and all the major magazines for its intro.

Ford officials also began a series of press conferences last week, running in 100 major cities, touting the new vehicle. The biggest conference will be in New York, where Ford Chairman Philip Caldwell will preside over a ride-and-drive staged on the aircraft carrier Intrepid.

• The Detroit FDA meanwhile is running a $650,000 promotional effort, 80 percent of it in media advertising. It includes a Continental Airlines giveaway and the "World's Largest Car Sale" being held May 26-28 at the Michigan State Fairgrounds. The sales spree is timed to coincide with the Grand Prix race week in Detroit.

More than 2,000 new Ford cars and trucks will be displayed, according to Robert L. Thibodeau, chairman of the Metro Detroit FDA and owner of Bob Thibodeau Ford.

All six media will be used in the saturation campaign. Ford dealers are also providing 62 courtesy cars — 31 Mustangs and 31 Thunderbirds — for the use of Detroit Grand Prix personnel.

As part of their promotion, they are running heavy direct mail with both "public" and "private" invitations (Ford owners, employes) to test-drive Tempo. On May 19-20, the 31 Detroit-area dealers will host advance showings of Tempo, with 300,000 invitations going out.

Continental Airlines is offering 100 free round trips to those who register at dealerships and take test-drives.

J. Walter Thompson handles Ford Division; Young & Rubicam, Lincoln Mercury.

Ford on verge of sales surge, Caldwell says

Continued from Page 3

but that "sticker shock is not really the issue it once was."

In response to a question at the meeting, Caldwell said the top five Ford executives spent $192,000 on expense-account items in 1982.

The 17 nominees to the Board of Directors were elected. John B. Connally and Michael D. Dingman did not seek re-election because they are directors of Wheelabrator-Frye, which was recently acquired by Signal Cos. At the time of the Ford meeting, Signal owned 80 percent of Mack Trucks — a competitor to Ford's heavy-truck business.

Caldwell left the door open for the directors to return if Signal sells its interest in Mack, as it wants to do.

Shareholders approved a profit-sharing plan for non-bonus-roll salaried employes that is similar to the one negotiated for hourly workers.

They named Coopers & Lybrand auditors and rejected three stockholder preposals. One would have disclosed consultants' names and fees. Another would have put a ceiling on retirement payments for executives.

The third would have required Ford to report on spending for lobbying aimed at the sale by the U. S. of AWAC planes to Saudi Arabia. Ford said it did not lobby for the sale; Caldwell, as an individual, urged several senators to support the sale.

JWT-Detroit relocates

DETROIT.—J. Walter Thompson moved into the Renaissance Center May 13 and opened for business May 16. The Ford agency's move from Dearborn to six floors of RenCen Tower 600 brings its 325 employes under the same roof as its major client.

Settlement proposed on 30-year-old consent decree

Justice moves to end GMAC case

WASHINGTON. — A tentative settlement to end a 30-year-old consent decree against General Motors and General Motors Acceptance Corp. has been announced by the Department of Justice.

The stipulation was filed with a federal district court in Chicago simultaneously with GM's and GMAC's motion to end the 1952 decree.

This case started Oct. 4, 1940, charging antitrust violation to restrain trade and commerce in wholesale and retail paper by tying GM dealers to GMAC for finance paper. Since that time, Ford Motor Co. and Chrysler Corp. both have developed their own financing firms.

William F. Baxter, antitrust chief, said that GM's ability to compete in financing terms with other auto makers is limited by the decree.

Similar decrees existed against Ford and Chrysler and their financing arms, but the Ford consent was ended March 8, 1983, by court order and Chrysler said it intends to file a similar motion. Baxter said he expects the government to go along with the Chrysler move as well.

The GM decree requires, among other things, that GM:

1. Accept payment from any finance company selected by a dealer.

2. Provide all finance companies with data about dealers if it provides data for one company.

3. Not require a dealer to use any particular finance company or to abide by any plan or rate set by GMAC.

4. Not recommend, endorse, or advertise GMAC or any other finance company to any dealer or the public.

GM, arguing for the end of the decree, said the ban on advertising of its financing or even its direct leasing activities, especially at a time of severely depressed sales, puts it at an economic disadvantage with its competitors.

GM also argued that because the business is so competitive, no maker would try to coerce dealers into using a captive finance company — in fact, it would be "foolhardy" to try to force a dealer to use a company that did not have the best conditions.

Moreover, said GM, the provision on floorplanning is "unrealistic and useless" in today's auto selling climate since with the shortage of capital, GMAC could not provide enough wholesale financing to meet the needs of all GM dealers.

Must remedy economic ills, Greenwald says

ST. LOUIS. — Chrysler Corp. Vice Chairman Gerald Greenwald warned that unless Washington does something about the federal deficit and trade imbalance, "the whole recovery could be stopped dead in its tracks."

He was concerned about long-term recovery, but told the Harvard Business Club here that "we are seeing short-term signs of at least a fragile recovery in the economy — interest rates down, housing starts up, and the stock market gone mad."

A Harvard alumnus and local boy who made good, Greenwald declared that if the major problems were left unresolved as "we pull ourselves out of the terrible recession," it would push the nation into another one.

He said that the June 15 payment date for a portion of Chrysler's federally guaranteed loans will begin a whole new era for Chrysler — "an era of growth, profitability and, best of all, independence."

Moreover, he said, "it marks a day of satisfaction and rejoicing for people all over this country, including many right here in St. Louis, who have rooted for us and have been with us in spirit every step of the way."

To keep the ball rolling, he said, "we're signing up new dealers, including nine in Missouri in the last four months."

Arizona leaders

Arizona Automobile Dealers Assn. officers are, from left: Tony Coury Jr., Tony Coury Buick, Mesa, secretary/treasurer; Richard R. Cunard, Cunard Motor Co. (Oldsmobile-Cadillac-Toyota-GMC), Yuma, president; Frank McClure, Holmes Tuttle Broadway Ford, Tucson, past president; Frank DiChristofano, Broadway Volvo, Tucson, president-elect, and Ron A. Slyter, Sierra Toyota, Sierra Vista, vice president.

Renault Encore production to begin in Kenosha in July

SOUTHFIELD, Mich.—American Motors will begin production in July of five-passenger hatchbacks called Renault Encore, which will be built from the Alliance platform.

Joseph E. Cappy, vice president, AMC marketing group, said AMC will produce the 3-door and 5-door hatchbacks at its Kenosha plant and that public introduction is scheduled for late September.

Cappy said that AMC's research indicated that the Encore name "connotes a repeat of the successful Alliance launch" while it distinguishes between the two cars.

The front-wheel drive Encore will compete along with Alliance in what Cappy calls the Class 3-Small segment of the market.

"Because about two-thirds of the Class 3-Small segment sales have been hatchbacks, Encore will enable us to increase our share of this growth segment of the market," Cappy said.

"In every case but one," he said, "other companies came out with hatchbacks first and followed with notchbacks. We did just the opposite and we're ready to move quickly if hatchback demand exceeds notchbacks, or vice versa."

Cappy said that although it is built on the Alliance platform, Encore will have its own distinct appearance inside and out.

Detroit requests foreign trade zone for Ford plant

WASHINGTON.—Request for a foreign-trade subzone is being made by the Detroit area for the Ford Dearborn assembly plant which makes Mustangs and Capris.

Some 6 percent of the components — such as radios, engines and transmissions — are imported.

Zone procedures would exempt Ford from duties on its exports, and on domestic sales, Ford could defer duty on parts and take advantage of the same duty available to importers of finished cars.

Average duty for parts used at this plant is 4.5 percent compared with 2.8 percent for cars.

Comments are invited on or before June 3.

April retail truck sales rise 20.4 pct. over 1982

Continued from Page 16

lower than the year-earlier 294,001, while Ford's was 8.8 percent higher than last year's 263,907 units.

Sales of Dodge and Plymouth trucks were up significantly during the month, but down slightly for the January-April period.

The month's total of 25,337 sales was 21.1 percent higher than the year-earlier 20,916 units. Through April, the count was down 2.6 percent to 84,596 units, compared with 86,879 in 1982.

GMC dealers retailed 23,458 trucks during the month, an increase of 20.3 percent over last year's 19,499. The four-month total was 82,200 units, up one percent from the year-earlier 81,358.

• Sales of four-wheel-drive Jeep vehicles were higher for both April and the four months. Dealers sold 6,417 units during the month, up 27.3 percent from last year's 5,040. Through April, the total was 21,963, a gain of 13.4 percent over the year-ago 19,363.

Sales of the Volkswagen compact pickup, which no longer is being produced, sagged to only 466 units in April, compared with 1,389 last year. Through April, the count was 2,043, down 62.2 percent from the previous year's 5,409.

Good gains for both the month and the January-April period were reported for all of the non-captive imports.

Toyota dealers retailed 12,138 compact pickups in April, an increase of 29.5 percent over last year's 9,375. Through April, the total was up 9.7 percent to 46,733 units, compared with 42,614 in 1982.

Sales of Datsun pickups during the month totaled 8,862 units, 52.5 percent higher than the year-earlier 5,813, and the four-month count of 36,405 vehicles was up 23.6 percent over last year's 29,465 units.

In April, Mazda dealers retailed 4,157 small trucks, a gain of 12.7 percent from the previous year's 3,689. The four-month total was up 75.6 percent to 21,070 vehicles, compared with 11,996 a year ago.

Isuzu dealers sold 2,214 units during the month, an increase of 37.4 percent over the previous year's 1,611. Through April, the total was 7,130, an increase of 32.4 percent over the year-earlier 5,387 units.

Sales of the Mitsubishi compacts, which made their bow in the U. S. last fall, totaled 586 in April and brought the four-month count to 2,550 units.

Chrysler retreats on proposal to cancel warrants

Continued from Page 1

dilute the value of Chrysler stock and hurt the company's efforts to borrow money for funds needed to develop new products.

In withdrawing the cancellation request, Greenwald said: "Repaying the loans is our foremost objective. Ultimately, we want to resolve all matters pertaining to the Loan Guarantee Act so that we may function as a privately financed company in the best interest of our customers, employes, shareholders and others with whom we do business."

He added, "Chrysler is grateful for the assistance provided by the U. S. Government. The Loan Guarantee Act is succeeding as intended by Congress and the Loan Guarantee Board."

As previously announced, Chrysler intends to pay off $400 million—one third of its government-guaranteed loans—by the end of June. Loan Guarantee Board approval has been requested for this and for issuance of $150 million in non-guaranteed bonds."

obituaries

E. Healy Dowd

CLEVELAND. — E. Healy Dowd, 48, president of Dowd Oldsmobile and vice president of Dowd Toyota, died April 25. Mr. Dowd was a past president of the Cleveland Automobile Dealers Assn. and had been a director of NADA and the Ohio Automobile Dealers Assn.

Andrew M. Nicoll

CONCORD, N. H. — Andrew M. Nicoll, 80, past president of the New Hampshire Automobile Dealers Assn., and the Concord Automobile Dealers Assn., died April 17.

Arthur M. Casey

NEWPORT NEWS, Va. — Arthur M. Casey, 70, founder of Casey Chevrolet here and a past member of the National Chevrolet Dealer Council, died March 27.

William J. Liddie

SALEM, Ind. — William J. Liddie, 59, owner of Liddie Chevrolet-Buick-Pontiac-Cadillac-GMC, died April 6. Before coming to Salem, he owned auto dealerships in New Albany and Clarksville, Ind., and in Flint, Fenton and Owosso, Mich.

Makers schedule 141,915 cars for week

Overtime, plant returns hike output

By Patricia Hoffman
Staff Writer

Overtime at 10 assembly plants and the resumption of work at four facilities following inventory-control downtime pulled last week's domestic car output up 10.54 percent from the previous week's total. Output also rose 11.09 percent from that of the comparable 1982 period.

Production last week was targeted at 141,915 cars, up from 128,386 the prior week, and up from last year's 127,746.

Breakdown for the week by company was: General Motors, 55.41 percent; Ford Motor, 23.56 percent; Chrysler Corp., 12.44 percent; Volkswagen of America, 5.21 percent; American Motors, 2.68 percent and Honda, 0.70 percent.

Year-to-date, the makers have assembled 2,308,371 cars, a 26.40 percent gain from 1,826,275 built in the same period last year.

Only one plant was reported down last week (May 9) for inventory control. The Ford San Jose point, source of Escort, Lynx, EXP and LN7 models, was idle for the second of a two-week shutdown. Operations there are scheduled to resume today (May 16).

GM's Wilmington point, source of Chevette and Pontiac 1000 models; Ford's Dearborn (Mustang and Capri) and Metuchen (Thunderbird, Escort and Lynx) facilities plus VWoA's Westmoreland (Rabbit) plant returned last week following one week of downtime.

The GM Detroit plant worked 24 minutes of overtime on each of two shifts Monday through Friday last week.

Also on daily overtime were Chrysler's Belvidere, Jefferson, Newark and St. Louis facilities. Belvidere, Jefferson and Newark operated two daily nine-hour shifts last week, while St. Louis worked one daily nine-hour shift.

GM's Flint, Leeds and Lordstown plants, plus Ford's Chicago and St. Louis facilities worked six days last week.

Usery, ex-Labor secretary, named GM-Toyota advisor

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — William Usery, Labor secretary under President Ford and a former director of the Federal Mediation and Conciliation Service, has accepted the job of advisor to management on the labor relations involved in the General Motors-Toyota venture.

If the FTC gives the go-ahead for the joint production of cars in Fremont, Calif., Usery said that he will attempt to work out "harmonious employment relationships" while using laid-off GM workers as a primary source of workers.

Many of Usery's ideas for improving productivity and quality at the Fremont plant seem similar to those which Nissan Motor Mfg. Corp. President Marvin Runyon has put into action at Nissan's light truck plant in Smyrna, Tenn., but Usery, while "neutral," believes in the American union movement.

"The idea is to be neutral — but to work with the union," Usery said.

As Usery envisages it, both management and labor recognize the need to change in order to make a product that is competitive in price and quality.

In order to do that, both U. S. management and workers must learn what is best from the Japanese, he said. But he does not believe that American workers will not work nor build as good a car as Japanese workers.

Usery stressed his belief in unionization and said he has already touched base with Douglas Fraser and with incoming UAW President Owen Bieber.

After the Dallas UAW Convention, Usery will meet with Bieber and although it is premature to discuss details when the company itself does not exist, a groundwork of understanding can be forged, he said. Usery sees no problem with GM and Toyota forging a joint venture. He said it is just like two investors making a short-time agreement, learning from each other for a totally new product, but then continuing to compete with other products and plants.

He will be around long enough to develop policy and see it happen — but probably not for the planned 12-year life of the venture, he said.

Usery, who is respected by both management and labor, sees the Fremont venture as a "historic step forward in economic history."

It is a "tremendous goal worth striving for" to have "two great nations and two great companies" join hands and to see a "Japanese production system provide jobs for American workers and quality automobiles at competitive prices for consumers," he said.

Canadian output rises 29 pct.; Ford plant back

The resumption of work at Ford Motor's St. Thomas car facility boosted last week's Canadian auto production 29.86 percent from the previous week's total. Output also soared 33.87 percent above the comparable 1982 period.

Last week's car output was targeted at 28,271 units, up from 21,770 built the previous week, and up from last year's 21,118.

Year-to-date, the makers have assembled 377,998 cars, a 12.86 percent gain from 334,919 last year.

Truck assembly last week was estimated at 12,239 units, down 3.66 percent from the prior week's 12,704. The total was also down 2.13 percent from the 12,505 built in the comparable 1982 period.

So far this year, 195,414 trucks have been produced, a 1.70 percent decline from last year's 198,792.

The Ford St. Thomas car facility resumed operations last week (May 9) following one week of downtime to trim inventories.

All car and truck assembly points were reported operating last week.

Truck production climbs to 51,658, highest of year

Overtime schedules and the return of two assembly points helped boost last week's domestic truck production to its highest point in a year.

Output for the week was targeted at 51,658 units, up 4.15 percent from 49,598 the prior week, and up 4.25 percent from 49,552 units in the comparable 1982 period. It was the most for any week since the week ended May 22, 1982, when the makers finished 52,413 units.

To date this year, 801,743 trucks have been assembled, a 9.57 percent gain from last year's 731,686.

Operations resumed last week (May 9) at Volkswagen of America's Westmoreland facility and International Harvester's Fort Wayne point following a week of downtime to trim inventories.

Daily overtime was scheduled last week at Chrysler's Belvidere and Warren truck facilities. Belvidere worked two nine-hour shifts Monday through Friday, while Warren operated one nine-hour shift five days.

General Motors' Lordstown (van), Pontiac (truck and bus) and Detroit facilities operated six days last week.

All other assembly points were reported working normal five-day schedules.

GM revises codes for body development

DETROIT.—General Motors is changing from letters to letters and numbers in its body-development code designations. For example, the former N-body project, the front-wheel-drive stretched J-body replacements for Pontiac Grand Prix, Oldsmobile Cutlass Supreme and Buick Regal scheduled for 1985 model introduction, is redesignated the GM-20 program. The cars will be assembled by Oldsmobile in Lansing.

Also in the development stage is a GM-10 program, which is a redesigned and combined A-body (Chevrolet Celebrity, Pontiac 6000, Oldsmobile Cutlass Ciera, Buick Century) and X-body (Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega, Buick Skylark) effort. GM-10 is a Chevrolet program headed by Robert L. Dorn, who was formerly chief engineer of Pontiac.

DeLorean offer to buy heroin is revealed

LOS ANGELES. — John DeLorean once offered to invest $2 million in Asian heroin and Colombian cocaine and termed it a "tragedy" when the deal fell through because the British Government required that the money be deposited in a trust account to satisfy receivers of his auto company, according to a document released by U. S. District Judge Robert

New Sprinter models bow in Japan

Insiders say that if the FTC approves the General Motors-Toyota joint venture, this car—or something very close to it—is what the two firms will build in the U. S. This Sprinter four-door is part of the Toyota Corolla range newly introduced in Japan. Story on Page 6.

Makers, suppliers lining up to support Detroit Grand Prix

By Joseph Bohn
Marketing Editor

Detroit's auto companies and suppliers are again lining up solidly behind this year's Detroit Grand Prix, anxious to promote their performance cars and civic pride.

Domestic car firms and suppliers will run about $750,000 worth of commercials on CBS' 12 to 2 p.m. telecasts on Sunday, June 5. Air time is limited this year because of the network's prior commitments to other events.

The Grand Prix will be tape-delayed for Detroit viewers, probably not airing until Sunday night.

Robert McCabe, president of Detroit Renaissance Grand Prix, Inc., was hopeful of breaking even on the event this year — which would bolster his group's long-range plan to sponsor the event for seven years.

Currently, Detroit Renaissance has a three-year contract, with an option for four more years. This is the second year.

"We're still getting income from sale of last year's posters," McCabe said, adding that ticket sales are running ahead of a year ago. The more years the race is held here, the greater the opportunity for spreading expenses and turning a profit.

CBS expects to pull about a 5.0 rating, worth 4.5 million viewers nationally who will see the live telecasts. A 30-second spot went for $34,000.

Participating in CBS's advertising slate are American Motors, Dodge, Ford, AC Delco, Ford Parts & Service, Lincoln-Mercury, Buick, GMAC, Chrysler - Plymouth, Chevrolet, Champion Spark Plug and Goodyear Tire & Rubber.

Volkswagen, GM Parts, Cadillac, Oldsmobile and Pontiac are not among the TV sponsors, though Pontiac has a print ad in the Grand Prix racing program.

Aside from advertising, there are many merchandising tie-ins

Ford projects 150,000 sales this year

$1 billion invested in Tempo/Topaz

By John A. Russell
New York Staff Writer

NEW YORK. — Ford Motor Co. launched its two newest models, the Ford Tempo and the Mercury Topaz, from the flight deck of the aircraft carrier USS Intrepid, a floating sea-air museum in New York Harbor.

Ford projected 150,000 sales for the cars this year. Tempo and Topaz go on sale Thursday (May 26).

The $1 billion investment in the new models, according to Ford Chairman Philip Caldwell, represents the last installment of a $3 billion investment to upgrade the product lineup.

These front-wheel-drive cars are targeted at the family market, according to Caldwell, with a base price of $6,340 for the Tempo and $7,355 for the Topaz, and the company already has 63,000 orders on file including 15,200 units from Hertz Corp.—the largest fleet order in Ford's history.

Claiming that the major competition in the market will come from domestic manufacturers — "the alphabet cars" — Caldwell said that the Japanese did not represent a significant force in this market segment.

But the symbolic effect of holding the new-model launch from the deck of a ship that fought in the Pacific during World War II against the Japanese was not lost.

Caldwell noted after the formal comments that the Japanese still represented a threat in the small-car segment and for that market he implied that he still wanted the Japanese to continue their voluntary export restraints.

Tempo and Topaz are powered by a 2.3-liter High Swirl Combustion engine with an electronic engine control system, the EEC-IV. The engine and the EEC-IV represent a $213 million investment for the company and, according to Caldwell, many Japanese manufacturers have been attempting to obtain the rights to this on-board computer.

The cars will be built at the Ford plants in Oakville, Ont., and Kansas City, and Caldwell said there was a strong probability that they would be manufactured in some of the company's overseas markets with the exception of Europe.

But Caldwell also said that there is no intention of exporting the car since the corporate philosophy is to build in the market they sell.

"We can't extract the fruits of the market without contributing to it," he said.

Caldwell also promised these cars would not have "major de-

Makers build 154,894 cars for week

Auto production highest in 2 years

By Patricia Hoffman
Staff Writer

Overtime at 14 assembly points upped last week's domestic car output to its highest point in two years.

Production last week was scheduled at 154,894 units, up 11.25 percent from the previous week's 139,233, and up 12.99 percent from last year's 137,089 units.

The week's total was the highest since the 162,485 tallied in the week ended May 23, 1981.

Breakdown for the week by company was: GM, 56.68 percent; Ford Motor, 24.45 percent; Chrysler Corp., 13.95 percent; American Motors, 2.69 percent; Volkswagen of America, 1.52 percent and Honda, 0.71 percent.

For the year-to-date, output reached 2,460,583 units, a 25.39 percent gain from 1,962,379 built in the comparable 1982 period.

Normal five-day operations resumed last week (May 16) at the GM Bowling Green (Corvette) plant after a day and a half of downtime the previous week due to a parts shortage.

Daily overtime was scheduled

Maserati's gamble

Little Biturbo has big sales goal

The Maserati Biturbo, introduced to the U. S. last week at the International Auto Expo in Los Angeles, is scheduled to begin arriving at dealerships beginning in July at a rate of about 300 a month—a phenomenal increase for the company that hand-builds its cars. Equipped with leather interior, 2.5-liter V-6 engine with two turbochargers and a twin Weber carburetor, five-speed transmission, four-speaker stereo and air conditioner, the price is expected to be upwards of $26,000. Top speed for the four-seat, 163-inch Biturbo is put at 130 MPH. Story on Page 59.

NEWSPAPER

Driggs calls protectionism the real threat

U.S. aide reassures import dealers

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Despite stiffer competition and protectionist moves, the imported auto industry is, indeed, here to stay, a panel of four experts told 1,000 import-car dealers last week at the sixth annual American - International Automotive Congress here.

The meeting was sponsored by the American International Automobile Dealers Assn.

Speakers were Michael A. Driggs, deputy assistant secretary of Commerce for automotive industry affairs; Cliff Schmillen, senior vice president for sales, American Honda Motor Co.; Peter Weiher, executive vice president, Volkswagen of America, and Thomas Nemet, AIADA chairman. Nemet is a Nissan - Volvo - Jaguar - Peugeot dealer in Jamaica, N. Y.

Driggs said that consumers, having become accustomed to the choice offered by the import companies, will still insist on the presence of imports in the marketplace.

This is despite the fact that the domestic companies have become more directly competitive with the imports — in size and in quality, he said. The import dealers that remain will be the best and will be prosperous, Driggs said.

As Driggs explained it, first the import dealers had to make themselves known; then it was just a matter of taking orders; now it is somewhat harder. But the real plus has been that the imports became known as dependable, reliable products, he said.

While their particular character as being fuel efficient has been useful during the two "oil shocks," it may not be helpful now as the market appears to be turning toward larger cars. But, he said, the imports protected themselves — and will continue to do so in the future — by having a larger model selection.

The real threat, Driggs added, is protectionism — to which Driggs and the entire Reagan Administration have shown opposition.

But because there are some 13 million units of excess production in Europe, Japan and the U. S., he said, countries tend to "protect" their industries rather than face up to the reality that their workforces must be reduced. The problem tends to be exacerbated in the U. S. which has more trouble exporting its cars, he said.

These attitudes and proposals — plus the recession — tend to trigger trouble because the nature of the industry is changing radically to a highly integrated one that crosses all borders, he said.

While Driggs would not predict what Congress may do about the UAW-backed local-content bill, he made it clear that the underlying pressure that creates such bills will not go away — given excess capacity and demand unlikely to grow enough to absorb it.

• Schmillen told the dealers that Japan's decision to limit imports "voluntarily" was a wise one considering the decline in U. S. auto sales and the domestic industry's importance to the American industrial base.

But, he added, the local-content bill passed by the House during the dying days of the last Congress had the potential of closing Honda's plant in Marysville, O.

Currently, Honda is at a 50 percent local-content level for the cars coming off the Ohio line, and Honda plans greater content as soon as it can be done. The lesson so far, said Schmillen, is that U. S. workers can build quality cars.

Weiher explained that even with free trade and free market conditions, it is still hard to compete successfully — hard to find a niche not occupied by the domestic companies. Nonetheless, Weiher is confident and optimistic about the future despite VWoA's current sales picture.

The first "challenge" listed by Weiher is the size of the small-car market — the one pioneered by the VW Beetle 30 years ago and the one that lasted well through two energy crises.

Now, however, with cheap gasoline and overcapacity, the consumer is looking at bigger cars. Diesel sales have gone down dramatically, and the answer — Weiher hopes — is to strengthen demand for small cars, by going to GTI types to show that the small car need not be an "economy box."

Another "challenge" is to maintain a production base of the right size. While 50,000 units annually may be enough for larger, higher-profit cars, more volume is needed for smaller units.

Otherwise, Weiher said, the answer is to stay flexible by balancing smaller and cheaper models with larger and more-luxurious ones — the kind of broader model choice offered by VWoA and by Porsche and Audi.

Finally, the "challenge" must be to maintain superior quality.

Weiher concluded by insisting that VWoA will stay in the market, "but it won't be easy."

Nemet agreed that import dealers and imported autos would remain part of the U. S. picture. But he noted two areas where danger lurks.

One is with the leasing system — which at present depends very little on mechanic servicing and on marketing. He warned the imports do not need the problem with subsidized competition which the domestics face with lease sales.

The other area — one unique to imports — is gray-market cars. The entrepreneurs who are using the loophole in the Clean Air Act are hurting import dealers, he said.

Customers turn to dealers for warranty and service where the so-called federalized cars are sold, he said, and dealers are caught in the middle when they do not have parts or show reluctance to service cars which may be out of compliance with federal law. This has become a major problem in California.

Mercedes building new parts facility in Southern N. J.

FRANKLIN TOWNSHIP, N. J. — Mercedes-Benz of North America is preparing to break ground for a multimillion-dollar, 167,000-square-foot parts distribution facility which will eventually create at least 40 new jobs in this Southern New Jersey area.

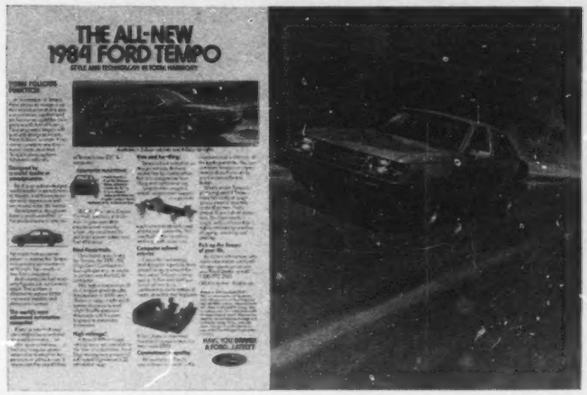
The facility, which will be located in an industrial park here, is scheduled to get into operation by next summer. It will replace the company's parts distribution center presently located in Northern New Jersey.

Mercedes-Benz of North America is using industrial revenue bonding from the New Jersey Department of Economic Development to fund the project. Although exact figures are not available, a Mercedes-Benz spokesman said that more than $8 million in bonds is available for the new facility.

Some of the 50 employes from the present parts distribution center will be transferred to the new center here.

5-millionth car for Chrysler Windsor

The five-millionth car built in Chrysler Canada's Windsor assembly plant has been driven off the assembly line. The milestone car was a pearl white 1983 Chrysler New Yorker Fifth Avenue four-door sedan.



Setting the Tempo

Ford is running Tempo ads in 45 magazines, including "intelligentsia" books like Harvard Business Review, to reach up and down the scale of buyers. A separate California campaign, two months away, will use spot TV and regional publications for an extra heavy run at imports. J. Walter Thompson, Detroit, handles.

Ford seizes No. 1 spot in European market

By Richard Feast
European Editor

LONDON. — Early first-quarter sales returns suggest that Ford has become Number One in Europe for the first time.

If the preliminary statistics are confirmed, they will show that Ford's rise to the top is almost entirely attributable to the controversial Sierra.

The figures also show a major gain for the other U. S. manufacturer, General Motors, and a substantial erosion of market share for the two French manufacturers, Renault and Peugeot SA.

The other noticeable aspect of the figures is the way in which the continent's leading six volume manufacturers have moved closer together. They were separated by only 2.6 percentage points in market penetration in the first three months of this year, compared with one year earlier.

These unofficial sales statistics — obtained not from Ford but from one of its industry rivals—give Ford a 13.7 percent market share in the opening quarter, compared with 13 percent in the same period last year.

A Ford spokesman said, "Our own figures suggest that is about right, but there are a lot of estimates in there. We would not be prepared to confirm our position just yet."

Escort continues in strong demand, but the major change in Ford fortunes must be attributable to the performance of Sierra.

By Ford's own reckoning it is grabbing a consistent 3.9 percent of the Western European market, compared with the 2.3 percent obtained one year earlier by the models it replaced, Cortina/Taunus.

• Sierra got off to a slow sales start last fall. Part of the problem was customer resistance to the unusual styling, but delays in building up a full model offering were also a factor.

So slack was the initial take-off that Ford accused its rivals of being the source of a so-called whispering campaign which suggested Sierra was a sales disaster.

All along, Ford maintained that Sierra would succeed, particularly in mainland Europe where Taunus had been weak. It was a different problem in the UK, where Cortina had been the best seller for most of the previous decade.

The industry sales statistics give Ford a 9 percent increase in total units sold to 386,600.

But by far the most substantial gain was by GM's Opel and Vauxhall. Their sales soared by 24.1 percent to 313,600 in the same period, good for an unprecedented 11.1 percent market share.

In GM's case, the success is more evenly spread between its mid-range Ascona (Cavalier), lower medium Kadett (Astra) and the introduction in some

NHTSA revises headlamp rule on Chrysler request

WASHINGTON.—As of June 15, new two-lamp rectangular sealed-beam headlamp systems are in accordance with NHTSA's newly revised Standard 108.

These will be smaller, but performance levels will be the same. Flexibility, however, can be allowed if tooling needs demand it.

The change was requested by Chrysler Corp., which wants to use the smaller, rectangular dual-beam sealed-beam headlamp in a two-lamp system that was developed by Wagner Electric. The idea is to improve aerodynamics and thus improve fuel economy.

The new system will use halogen bulbs from Type 2B headlamps, the reflector from the current Type 2A headlamp and a modified lens. The ground terminal will be rotated so improper bulbs cannot be inserted. To insure that replacement will be readily available, Chrysler suppliers — Wagner, GE, and GTE Sylvania — will handle aftermarket distribution, thus making them available in more than 10,000 outlets. Chrysler's 20 parts warehouses will also carry the parts.

Chrysler has also argued that because the new headlamp uses components from other headlamps, there should be a "considerable" cost savings over the current halogen dual rectangular lamps.

Spicer 5-speed makes its bow in '84 trucks

TOLEDO.—After five years of development, engineering and testing, Dana Corp.'s Spicer Transmission Division next month will begin producing its first transmission fc.. the Class 6 truck market, a five-speed synchronized unit.

Rudy Eskra, division general manager, said the transmission will be available starting with production of 1984 model trucks. It will be standard in International S-Series medium trucks and optional in Ford F-Series mediums, he added.

Designated the CM-40, the new transmission is designed for worldwide application.

"The truck-manufacturing industry is now a global business," Eskra noted. "North American OEMs are planning to expand production onto a number of continents, while foreign manufacturers are selling their trucks here.

"As a component supplier," he added, "we must develop our transmissions with worldwide market applications and production in mind."

Eskra said the CM-40 is metric in its basic design so that it can be produced at any Dana transmission-manufacturing facility in the world.

But for installation in U. S. trucks and for mating with other U. S. components, he added, certain external CM-40 parts and surfaces are to U. S. dimensions.

Dana's European and U. S. engineers worked together in

FuelTech's airplane cockpit

Gelco Truck Leasing's FuelTech has the look of an airplane cockpit, and some capabilities to match, as the age of the push-button truck approaches, with ground-speed radar, cruise/speed control, fuel meter and a gross-cargo-weight monitoring device.

Gelco expects 8 MPG from computerized rig

ATLANTA. — Gelco Truck Leasing has introduced "FuelTech," a computerized demonstration rig which it said is expected to deliver up to 8 MPG in typical highway use with loads up to 80,000 pounds GCW and averaging 65,000 pounds GCW.

Gelco projections, according to George R. May, president of the St. Louis-based lessor formerly known as Feld Truck Leasing, are based on preliminary road tests as well as computer simulations similar to those which forecast the performance of Operation HELP vehicles.

"In close cooperation with major truck-component designers and manufacturers, we expect, through our Operation HELP computer simulation and testing program, to have the 10-MPG truck on the road by 1990," May said.

An International COF9670 tractor powered by a Cummins Big Cam III 350 engine, with an aerodynamically advanced trailer, FuelTech has a 13-speed transmission with a 3.70 rear-axle ratio designed for GCW range from 65,000 to 80,000 pounds.

May said extensive on-board electronics provide operating data and driving automation options to maximize hauling productivity, fuel efficiency and operator comfort.

• Other features include Goodyear's new Super Single tires which May said reduce rolling resistance, primarily by reducing the number of tires from 18 to 10 shorter, wider tires, and aerodynamic improvements that

truck industry news

Three-month tallies rise 11 pct. over '82; lights, mediums up

Registrations of new trucks of all types in the U. S. were almost 11 percent higher in the first quarter than a year ago, with increases in two of the three major market segments—light and medium trucks.

Through March, according to R. L. Polk & Co. statistics, there were 592,311 new-truck regis-

GVW table on Page 59.

trations, a gain of 10.9 percent over the year-earlier 534,188 units.

The three-month total was the highest since the first quarter of 1980, when 663,257 units were registered. The alltime January-March high was achieved in 1979 with 874,407 tallies.

During March, 226,904 new vehicles were registered in the U. S., an increase of 9.3 percent over last year's 207,514 units. It was the highest March total since 1979, when a record 317,-351 trucks were registered.

Light-truck registrations through March totaled 556,679 units, an increase of 12.5 percent over the year-earlier 494,-863. Medium trucks were up 2.3 percent, from 8,909 a year ago to 9,111. Heavies were off 12.8 percent to 26,521 units, compared with 30,416 in 1982.

• Registrations were higher this year in four of the eight weight classifications.

The Group 1 total of 309,388 vehicles was 11.8 percent higher than last year's 276,623. Group 2 was up 15 percent, from 214,-108 units a year ago to 246,213. But the Group 3 count plunged 73.9 percent to only 1,078 units, compared with 4,132 in 1982.

In Group 4 this year, there were 72 registrations, compared with only four a year ago. The Group 5 total dropped 33.2 percent, from 229 units last year to

Continued on Page 59, Col. 2

HD registrations in first quarter lowest since 1976

First-quarter registrations of new heavy trucks in the U. S. were the lowest for any comparable period since 1976.

The three-month total of Groups 7 and 8 tallies was 26,-521 units, according to R. L. Polk & Co. statistics, down 12.8 percent from last year's 30,416, but 25 percent higher than the 21,219 heavies registered in the first quarter of 1976.

Heavies' best first quarters occurred in 1980 and 1979, when 49,557 and 48,336 Groups 7 and 8 new vehicls, respectively, were registered.

March tallies totaled 10,981 units, the highest since last December's 11,336. It was 6.8 percent below the year-ago 10,818,

truck personnel

Desch appointed GM at Mack Financial

Robert T. Desch, assistant vice president-operations, Mack Financial Corp. since 1978, has been appointed vice president and general manager of the firm. He replaces **Wallace P. Vogler,** who resigned.

Robert T. Desch

Desch joined Mack Financial in 1970 as a district collection manager in Cleveland. Previously, he had been with Dun & Bradstreet.

A number of engineering promotions also have been announced by Mack Trucks, Inc. They include:

Edward C. Merke, from supervisor of engineers in the product development group to chassis development manager.

Clark H. Confer, from senior project engineer in product development to supervisor of engineering-cab group.

Steven F. Homcha, from supervisor of test engineers in product development to the new position of vehicle durability manager.

Herbert A. Cook, from highway engineering supervisor in the product engineering group to manager of highway-vehicle customer engineering.

Michael L. Feathers, from senior project engineer-highway vehicles to supervisor of engineering-highway trucks.

Dennis R. Grejda, from project engineer to supervisor of engineering-highway trucks.

Bryson C. Ocker, from vehicle engineering supervisor to manager-construction vehicle customer engineering.

Frank I. Green to supervisor-engineering and design in the construction vehicle group.

Mohamed El Ghamrawi, from senior project engineer, to supervisor-engineering and design in the construction vehicle group.

Wilson, Oliphant get new Volvo White duties

Volvo White Truck Corp. has named **David Wilson** marketing vice president and **Lawrence E. Oliphant** sales and distribution vice president.

Wilson, who had been in charge of sales and marketing, assumes added responsibilities in the areas of market research, training, sales promotion, branch operations and long-term strategy.

Oliphant, formerly vice presi-

Rockwell sets up Canadian Dealer Advisory Board

TROY, Mich. — Rockwell International's Heavy Vehicles Components Operations has announced the establishment of a Canadian Dealer Advisory Board.

James F. Lambert, HVCO vice president, North American field sales and marketing, said "We want to become a better supplier to this important group, and in order to do so, we need their advice and counsel."

He indicated that the 10-member dealer board will represent all major heavy-duty truck manufacturers, and said "board membership will be based on the dealer's knowledge of the industry."

Each board member will represent all dealers in his region. Under this organizational arrangement, Lambert said, every Canadian heavy-duty truck dealer will have a direct line to the management of Rockwell's HVCO through the Dealer Advisory Board.

Lambert said the initial board meeting will take place in Mont Ste. Marie, Quebec, June 26-29.

First time in history

Ford seizes top spot in European market

Continued from Page 3

markets of the supermini Corsa (Nova).

BL, Volvo, Daimler-Benz and BMW also claimed slightly improved market shares. The Volkswagen group increased its sales, but lost a fraction in market share, because the increase —2.4 percent—was not as great as the overall increase in European sales in the first quarter (3.5 percent).

Indeed, the VW group's position would have been much worse but for the turnaround in Audi fortunes on the strength of the new 100 sedan. VW sales slipped fractionally, but Audi's were up by more than a quarter.

According to the statistics, the major losers were Renault, Peugeot SA and Fiat. In part, this can be explained by the general sales declines in their domestic markets.

Italian sales fell by 8.2 percent (to 445,300) and in France the drop was 4.2 percent (to 505,800). Additional problems for the French concerned long strikes at factories in both major groups.

And the major markets which rose — Germany, the UK and Spain—were those where Ford and GM have substantial manufacturing facilities. In particular, new-car sales in the UK were up by more than a fifth, which in part explains the improved positions of Ford, GM and BL.

In the opening quarter of last year, Renault was the market leader with 14.3 percent. GM was sixth with 9.3 percent, and four others — Peugeot SA, VW, Ford and Fiat — were in between.

In the first three months of 1983, Ford was on top with 13.7 percent and GM was still sixth with 11.1 percent. And the four other majors—Peugeot SA, VW, Renault and Fiat — are even more tightly packed in the middle.

The statistics indicate that Western European car sales rose by 3.5 percent to just over 2.81 million in the first quarter. Ten national markets were up, with substantial number gains by the UK, West Germany, Spain and Austria.

First-quarter sales in Europe by manufacturer were:

	1983	1982
Ford	386,600	354,600
Fiat Auto	366,800	380,400
Volkswagen Group	337,700	329,800
Audi	83,100	65,500
Volkswagen	254,600	264,200
Renault	336,200	389,400
Peugeot SA	329,600	357,700
Citroen	137,300	151,400
Peugeot	111,900	112,900
Talbot	80,300	93,400
General Motors	313,600	252,700
Japanese (all)	267,400	231,000
Others	122,000	113,000
BL	116,500	97,700
Daimler-Benz	91,100	85,500
BMW	82,900	75,600
Volvo	63,900	52,200
TOTAL	2,814,300	2,719,500

First quarter sales in Europe by country were:

	1983	1982
West Germany	648,900	612,800
France	505,800	527,800
UK	500,700	412,900
Italy	445,300	484,900
Spain	145,600	138,700
Holland	120,200	106,500
Belgium/Lux.	106,200	113,000
Switzerland	77,800	74,100
Austria	60,900	48,600
Sweden	50,200	51,100
Finland	33,800	32,600
Denmark	29,400	25,000
Norway	29,200	28,500
Ireland	24,800	28,300
Portugal	19,700	17,200
Greece	15,800	17,500
TOTAL	2,814,300	2,719,500

These unofficial figures, obtained from industry sources, give a broad outline of shifting changes in demand geographically and for manufacturers. Confirmation of sales statistics from the various national markets takes many months in some cases. Figures may not tally due to roundings.

UNITED STATES DISTRICT COURT
NORTHERN DISTRICT OF ILLINOIS
EASTERN DIVISION

UNITED STATES OF AMERICA, Plaintiff, v. GENERAL MOTORS CORPORATION, GENERAL MOTORS ACCEPTANCE CORPORATION, and GENERAL MOTORS SALES CORPORATION, Defendants. CIVIL ACTION NO. 2177

TAKE NOTICE that GENERAL MOTORS CORPORATION ("GM") and GENERAL MOTORS ACCEPTANCE CORPORATION ("GMAC"), defendants in this action, have filed a motion for an order terminating the "Final Judgment" in this action, which was entered on July 26, 1952. The plaintiff, the United States of America, has consented to the entry of such an order, but has reserved the right to withdraw its consent for at least seventy (70) days after the publication of this notice.

The amended complaint in this action, which was filed in 1941, alleged that GM had combined and conspired with GMAC to restrain trade and commerce in the WHOLESALE AND RETAIL SALE AND FINANCING OF GM AUTOMOBILES by requiring GM dealers to patronize only GMAC. The Final Judgment requires, among other things:

1. that GM accept payment from any finance company selected by a dealer for cars delivered by GM to a dealer;
2. that GM provide, upon request, substantially equivalent office space in its manufacturing and assembly plants to all finance companies that extend wholesale financing to dealers if it furnishes such space to any finance company;
3. that GM provide information concerning its dealers to all finance companies, if it provides such information to any finance company;
4. that GM not enter into any contract with any dealer that requires the dealer (a) to patronize any particular finance company, or (b) to observe any GMAC plan or rate for financing automobiles;
5. that GM not terminate any dealer, or threaten to do so, because of the dealer's failure to patronize any particular finance company;
6. that GM not attempt to influence any dealer or prospective dealer to patronize GMAC by sending an agent of GM and an agent of GMAC to visit the dealer at the same time;
7. that GM not recommend, endorse or advertise GMAC or any other finance company to any dealer or to the public; and
8. that GMAC not coerce or intimidate any dealers into patronizing GMAC.

Interested persons may submit comments concerning this matter by sending them to John W. Clark, Chief, Special Trial Section, Antitrust Division, Department of Justice, Washington, D.C. 20530 (telephone: (202) 724-6335). Such comments must be received by the Division within sixty (60) days.

On August 15, 1983, at 2:00 PM, the Court will hold a hearing on the motion. The hearing will be held before:

The Honorable Frank J. McGarr
Chief Judge
United States District Court for the
Northern District of Illinois
219 South Dearborn Street
Room 2541
Chicago, Illinois 60604

At that time, any interested persons who have filed comments with the Antitrust Division may appear and be heard.

Copies of the complaint, Final Judgment, motion papers, all comments submitted and all further papers filed with the Court will be available for inspection at the Legal Procedure Unit of the Antitrust Division, Room 7416, United States Department of Justice, Tenth Street and Pennsylvania Avenue, N.W., Washington, D.C. 20530 (telephone (202) 633-2481), and at the Office of the Clerk of the United States District Court for the Northern District of Illinois, Eastern Division, 219 South Dearborn Street (20th Floor), Chicago, Illinois 60604. Copies of any of these materials may be obtained from the Legal Procedure Unit upon request and payment of the copying fee set by Department of Justice regulations.

Recaro® Builds Seats to Fit Every Man Known to Automobile.

Whether you're building world cars or world beaters, now your vehicle can have seats from the world leader—Keiper Recaro Inc.

The automotive world has long recognized the virtues of Recaro seats. Orthopedically correct, they are the standard by which all transportation seats are judged.

Keiper Recaro now offers the expertise which built such seats to the American automotive industry. Adding to our national headquarters in nearby Battle Creek, Michigan we've established full production facilities in Ligonier, Indiana. With full manufacturing, design and development capabilities locally placed, we're ready to supply every automobile with a perfect seating application.

Call on us and interface your ideas with our seating expertise. We'll give you the exact seating solution you require. Because Recaro builds seats to fit every man known to automobile.

CAD/CAM market continues growth despite economic recession

Sales advance pegged at 28 percent on revenues of $1.3 billion in 1982

Just how fast is the CAD/CAM (computer aided design / computer aided manufacturing) industry growing? By leaps and bounds.

Despite a slowdown in economics worldwide, CAD/CAM industry growth in 1982 hit 28 percent with total revenues of just over $1.3 billion. That compared to a 40 percent growth rate in 1981.

The figures are compiled by Daratech Inc., Cambridge, Mass., in its 1983 directory that contains detailed information on 60 vendors and 125 systems in the CAD/CAM market.

Daratech says few major vendors were seriously hurt last year and, indeed, some compiled record sales gains. Growth leaders were Intergraph, IBM, Scientific Calculations, MCAUTO and Calma, all of which gained market share at the expense of Computervision, Applicon and Auto-trol, which lost market share, according to Daratech.

Intergraph, the fastest-growing CAD/CAM vendor in 1982, moved past Calma into third place behind IBM. Intergraph grew 71 percent in 1982, and with revenues of $156 million has captured 12 percent of the overall market. Propelled by a 56 percent growth in the $206 million A-E-C market (a segment in which it is the leading supplier with 30 percent of sales), Intergraph's success, according to Daratech, was mainly due to its ability to deliver up-to-date technology featuring a 32-bit processor and fast, black-and-white raster, and color displays, at a time when its principal competitors in the A-E-C segment—Computervision, IBM, and Auto-trol—still had one or more of these features under development.

In addition Intergraph expanded its market share in the $102 million mapping segment to 67 percent, and gained a 4 percent share of the lucrative $630 million mechanical market in its first full year. (The automotive industry makes up a significant part of the mechanical CAD/CAM market.)

IBM, the computer industry giant and the world's number two CAD/CAM supplier, continues to increase CAD/CAM market share. Trailing Computervision, the industry leader, by only five points, IBM's overall market share reached almost 20 percent in 1982 and promises to increase still further this year, Daratech says.

Utilizing the vast resources of its sales force, IBM concentrated on the mechanical market segment where it is now firmly in the lead with a 35 percent share. This segment was particularly receptive to IBM because, (still the bulk of the market). IBM was thus able to offer low-end users systems with superior performance, data-base compatibility and proven expansion potential, at competitive prices (albeit with obsolescent vector-refresh workstations).

Calma's market share increased one point to 11 percent on revenues of $138 million. Trailing Intergraph in overall market share, Calma's gains have come in the $348 million electronics (PCB/IC) segment. Here it is the number two supplier with almost a 30 percent share trailing the market leader, Computervision, by only four points. The number three supplier in this segment is Applicon with 14 percent of the market.

Scientific Calculations, number four supplier in the electronics market segment, had revenues of $21 million in 1982, 40 percent more than the previous year. With a 6 percent share of the electronics market, Scientific Calculations has built its reputation on good quality, high-performance software and can be expected to make further gains in 1983, according to Daratech, which expects the company to establish a foothold in the mechanical segment this year with a product based on software developed by Philips N.V., the multi-billion-dollar Dutch conglomerate.

The industry trend toward consolidation is expected to continue during 1983.

• The industry has begun to consolidate, with established turnkey vendors purchasing weaker CAD/CAM software houses to strengthen their product lines. This trend is expected to continue in 1983.

Computervision acquired Cambridge Interactive Systems (Cambridge, UK) in November 1982. CIS are the developers of Medusa, a 3-D mechanical design software package marketed in this country by Prime under a contract due to expire in 1985. The Medusa package has received very good reviews in Europe and should considerably strengthen Computervision's product line in the mechanical market—a market in which they continue to lose ground to IBM.

Prime recently purchased Compeda, a British government-owned CAD/CAM company for a reported $7.5 million. Compeda's key product is PDMS, a Plant Design Management System used to model process plants and nuclear power stations. Widely respected in the field, PDMS is used by such companies as Dow Chemical, Imperial Chemical Industries (UK) and Electricite de France. It gives

Manufacturing

Continued from Page D-3

electronic sharing of part design and manufacturing information between engineering groups facilitates the marriage of design and process."

Through use of the cathode ray tube and interactive computer terminals on the factory floor, a paperless factory, or at least paperless shop floor, can be envisioned in the near future, the Ford executive says.

"The scope of information contained in an idealized computer integrated manufacturing system includes engineering design, manufacturing planning, manufacturing control and factory automation data base systems," Guy says.

"The next area of change for continuing improvement is the manufacturing process technologies themselves, and virtually all technologies are covered. That includes machining, forming, welding, casting, painting, testing and fastening, to name a few. In addition, programs to develop the communication interfaces between our processes through their control systems are also under investigation.

"The thread of commonality among all of the conventional processes is electronic control technology, including programmable controllers and the more recent micro-PC products," Guy says.

"These devices have reached a level of capability and cost effectiveness which leads to expanded application and widely increased usage, thus providing capability for greater process flexibility, reliability and control.

"Programmable controllers are then suitable for the controlling of individual machines, and when tied together through a central processing unit the controlling of entire processes," he says.

"Ford's factory in the future probably won't be of the type often read about, where the lights go off, people head for home and the plant continues at its normal output. We will, however, have some manufacturing systems within various plants performing unattended, but I doubt this will encompass the total factory," Guy says.

Automated welding, material handling and some assembly work by robots have become very commonplace in auto plants in recent years. But it may be that more nearly completely automatic manufacturing will involve metal removal. That's anticipated by Robert Huehner, vice president and general manager of Steelweld Robotic Systems, part of United Technologies' Automotive Group.

"I believe machining processes will form the leading edge of automated factories. This is simply because closer tolerances are maintained which is a requirement in almost all cases of automation," Huehner says.

"CAD tied to controls on machines will automate this process. It must become an accepted practice that once a component or subassembly has been located or positioned — or work performed — is not wasted by dumping the part into a container only to be sorted out and located again for following operations.

"Even if operations are not in line, magazines or similar means must be employed so this operation is not wasted and, consequently, repeated at a later stage," he says.

Huehner says that because some procedures lend themselves well to automation, there may be the appearance of full automation. "For example if the body assembly operation applies all welds automatically, this is considered total automation. I know car plants which achieved this 10 years ago. They have not stopped automating since. Although in these cases, existing automation was replaced with better performing or more reliable automation," he says. □

Chart shows 1982 revenues and shares of the mechanical CAD/CAM market by companies. Revenues are in millions of dollars. Source: Daratech Inc.

CAD/CAM

Continued from Page D-4

Prime an excellent product with which to enter the A-E-C market segment where it will compete primarily with Intergraph. Compeda was to have been sold to Computervision; however, the sale was blocked by Kenneth Baker, the British Information Technology Minister, because of misgivings about further strengthening the leading U.S. CAD/CAM company.

Tektronix bought VR Information Systems (Austin, Tex.), developers of Merlyn, a software package for PCB and IC layout. This purchase will strengthen Tektronix's turnkey CAD/CAM product line.

• In the last quarter of 1982 a new generation of CAD/CAM and CAE systems was unveiled. Characterized by powerful, 32-bit processors built into fast-response workstations; raster displays that redraw complete screen images in fractions of a second; high-speed local area networks; distributed data bases; and low entry-level costs, these systems can be incrementally expanded in size and performance to 1,000 or more workstations.

Typical of the new breed are systems introduced by Cadlinc and Versatec last November. Cadlinc's Series 80 system is designed for mechanical drafting and manufacturing applications, including complex surface design and NC programming. Versatec's Expert 1000 and 2000 systems focus on general 2-D drafting and PCB applications respectively. These systems are fairly inexpensive ($70,000-$180,000 for an entry-level system) to begin with, and add-on workstations cost just $25,000 at Cadlinc and $35,000 at Versatec, compared to more than twice this amount for current-generation workstations. The price puts these networked systems within reach of most low-end users.

With so many clear-cut advantages in price, response time and expandability, most CAD/CAM vendors are scrambling to develop new-generation networked systems, and numerous new products should be announced before the end of the year.

• With a new generation of CAD/CAM systems already here, Computervision, IBM, Calma, Auto-trol and Applicon are caught between products, according to Daratech. Computervision, Applicon and Calma have not yet released 32-bit processor-based mechanical systems. Auto-trol is still working to improve the performance of its 32-bit offering to competitive levels, and IBM's raster and color workstations are yet to be released.

Despite the slowdown in industry growth last year, IBM, Prime, Control Data, Perkin-Elmer and Sperry Univac have strengthened their commitment to the CAD/CAM business. Hewlett-Packard, Honeywell and Digital are also moving to participate in the market more directly.

IBM's newly formed Graphics Systems Programs Group is responsible for developing and marketing CAD/CAM products. Based in White Plains, N.Y., the group will develop products internally, like the new 7361 Fastdraft system, for example, or contract to outside organizations for R&D.

Perkin-Elmer recently opened a CAD/CAM Operations Office in Waltham, Mass., in close proximity to the high-tech companies located around Route 128 outside Boston. The CAD/CAM Operations Group markets Perkin-Elmer's version of Lockheed's CADAM system and also is responsible for developing other CAD/CAM products.

Prime Computer consolidated its UK operations. Compeda, acquired by Prime in December 1982, is now a part of Prime Computer CAD/CAM Ltd., formed by Prime earlier this year to centralize CAD/CAM research, development and marketing.

Control Data, making a concerted effort to gain a place in the mechanical market area, has announced a series of new systems and workstations.

CAD/CAM vendors continue to lower prices and/or increase performance. Bruning recently increased the computing power of its EasyDraf2 system 250 percent, utilizing Motorola's 68000 32-bit microprocessor, and dropped the price by 23 percent. EasyDraf2 now starts at $57,700 for a turnkey system.

IBM reduced the entry-level price of a CADAM system 30 percent. A four-terminal system now costs $350,000. Perkin-Elmer also lowered its CADAM system prices, by 13 to 34 percent on one- to four-work-station systems. A one-workstation system now sells for $140,000, while an eight-workstation system (the maximum number of workstations possible) is priced at $355,000. □

A computer controls this glass-cutting operation at a new PPG Industries Inc. float glass plant in Mount Zion, Ill. Glass is cut to size automatically from a wide ribbon and conveyed to shipping.

world news briefs

A car that does what it's told

The Nissan Research Vehicle II (above), based on the Japanese company's Sunny model, can respond to voice commands, automatically switch on its lights when brightness decreases and activate its wipers when rain hits the windshield. NRV II was conceived to demonstrate design potential in reducing activity of the driver and improving accident avoidance capability and occupant protection.

Nissan invests in Amsterdam

Nissan Motor Co. will invest nearly $35 million in a car components plant in Amsterdam, Netherlands. The company was the top Japanese retailer in Europe last year with sales of more than 250,000 vehicles.

France tops 23 million

France's Chambre Syndicale des Constructeurs d'Automobiles estimates the number of vehicles in the nation at 23.19 million. The total includes 20.3 million passenger cars, 6 percent of them diesels. France's fleet totaled 5 million in 1958 and 11 million in 1968.

Closed borders in Nigeria

Nigeria has halted all car imports. The African country depends on oil exports for more than 90 percent of its export earnings.

Fiat goes to Africa

A Zambian company, Livingstone Motor Assemblers, will begin assembling Fiat Uno and Argenta and Peugeot 504 models this year.

Saab still up

Saab seems likely to raise annual output above 100,000 for the first time this year. The Swedish company's first-quarter sales of 24,600 units were up 15 percent over January-March 1982.

Mercedes rejects lead-free

BMW's campaign to introduce lead-free gasoline in Europe does not impress competitor Daimler-Benz. Werner Breitschwerdt, D-B director of research and development, says cars would be more expensive to buy, maintain and fuel, while offering poorer performance. Besides, he says, lead-free diesel fuel is already available. His company is firmly committed to diesel cars.

India takes to Toyota

The Indian government has approved a joint agreement between Toyota Motor Co. and a Delhi company for production of 15,000 light commercial vehicles a year.

The jewel fades

Ford of Britain, so-called jewel in Ford's overseas crown because of its recent financial record, slipped last year. Profits before taxes dipped 12 percent to the equivalent of $300 million. Talbot Motor Co. — PSA Peugeot-Citroen's British operation —cut its loss 40 percent to $85 million.

Cash for Volvo

Capitalization of Volvo Car B.V., Holland, has increased. The Dutch government chipped in $166 million and Volvo Car Corp. (Sweden) $57 million. The money is needed to develop a replacement (in 1985-86) for the 300 series. The company's sales increased last year by 21 percent and losses were halved to $10.5 million.

Leyland goes CVT

BL's Leyland Vehicles is developing a continuously variable transmission (CVT) said to be capable of improving city-bus fuel consumption by 30 percent. The first stage of a 10-year development program was shown on a Leyland National City Bus. The next step will use regenerative braking. Leyland's system is based on the Hayes rolling traction drive principle, which has been in existence for half a century.

Red ink at VW

The Volkswagen Group blames losses in the U. S. — and also Mexico, Brazil, Argentina, South Africa and its Office Equipment Division — for last year's $122 million deficit. The previous year earnings totaled $55 million.

PSA getting even

The Peugeot Group has written to shareholders predicting a deficit for last year of up to $300 million. But it anticipates breaking even this year after several years of losses.

Back to the brink

A month-long strike over wash periods by 5,000 employes at Austin Rover's Cowley, England, works lost the company production of at least 11,000 vehicles. The company was hit as it geared up to launch its vital Maestro model made at Cowley.

Daf goes to Spain

Daf Trucks is continuing the policy of making its export companies direct subsidiaries with a takeover of its Spanish importer. Sweden and Norway came into the fold during the past two years.

Jaguar still surging

Jaguar Cars built its 10,000th model of 1983 at the end of April — almost as many as in entire 1981. Full-year production is projected at 27,000 with 15,000 destined for the U. S.

The best selling cars in Europe's markets

Survey attempts to pinpoint the leaders in 14 countries

By Richard Feast
European Editor

What is Europe's best selling car?

An exhaustive survey of the top selling charts by Automotive News can positively reveal — it depends.

It depends on who you talk to and on definitions. One thing generally agreed, though, is that it is one of three models: Ford Escort, Renault 5 or Volkswagen, Golf/Jetta range.

Ford says the Escort had 4.8 percent of last year's total market, or around 470,800 sales.

But it reckons it was outsold by Renault's 5 by a few hundred units. Renault, though, claims sales of 467,200 for the model.

Over in Wolfsburg, Volkswagen says it sold 435,600 Golfs last year.

VW out of the running? Yes, unless one includes the Jetta sedan derivative, which sold just over 105,100 in western Europe last year.

Sales of the two combined would give VW a handsome 540,-700, quite comfortably the best.

The uncertainty arises because of the number of the national statistics offices which exist in Europe. Details from some are sketchy, and in the important case of Italy, very slow in being confirmed.

The Automotive News survey — covering 14 national markets but without Greek and Portuguese statistics — concentrated on establishing top 10 sellers in each market. Thus, sales for cars in positions 11 and below are not necessarily known.

Nevertheless, it became clear from the various top 10 results that Escort, R5 and Golf (and Jetta) managed to stack up the best figures. Confirmation comes from each manufacturer.

What this unprecedented analysis does establish is the wide variety of tastes among European consumers.

There are 10 different chart toppers in the 14 markets, including some real oddities.

In Finland, a close neighbor of the Soviet Union, the Lada is No. 1. In Denmark, a country of extremely high auto prices, the cheap Czech Skoda is the best seller.

The Golf scores the most firsts — four, compared with the R5's two.

But the Escort is the most consistently placed car in the charts. It scores a position in all but one of the markets surveyed, Italy.

Other consistent scorers are Opel's Ascona (Cavalier in the UK) with 11 and the Golf and Opel Kadett with 10 apiece. Of the Japanese, the most consistent seller by far is the Mazda 323 with eight placings.

In pure number terms, the R5 sells more in a single market than any other model — 272,250 to become France's best seller. Its nearest rivals are the Golf/Jetta in Germany (245,800) and the Fiat 127 in Italy (220,200).

No model has a bigger share of a national market than Volvo's 200 series in Sweden. Its sales amounted to 45,300. or more than one in every five cars sold last year.

It serves to underline the fact that where a country has a domestic industry, its local products end up on top. This is clear in the figures from West Germany, France, Italy, the UK and Spain, which between them last year accounted for 85 percent of all car sales in Europe.

The interest emerges in the countries with no volume domestic industry, such as Switzerland and Austria. There the Golf from near neighbor Germany is top.

By and large it is in the "neutral" countries that the lesser known models from Japan and Iron Curtain countries begin to emerge. And it is in these markets that domestic European makers have lost much ground in recent years.

Truck industry tempest

New ownerships and changing names

The former Chrysler-Europe commercial vehicle concern in Spain received a new name — Renault — at the time of last month's Barcelona auto show.

It happened at the same time as Signal Cos., parent firm of Mack Trucks Inc., in the U.S. was trying to interest Renault Industrial Vehicles (RVI) in extending its 20 percent interest in Mack to full control.

The problem for RVI is that there is a shortage of cash in the till, just as there is with many of Europe's truck makers.

At the same time RVI's European partner, the Peugeot Group, must be wondering whether it wants to own 50 percent of a company it does not manage and which continues to lose money.

RVI got a 50 percent interest in April 1981 from PSA in the commercial vehicle business the latter acquired in its 1978 takeover of Chrysler Europe. Those truck interests centered on Villaverde, a suburb of Madrid, and Dunstable in England. The Spanish company subsequently was renamed Hispavinsa, while the UK operation became Karrier Motors. But the products they sold were still Dodges.

For Spain the change to Renault is logical. Renault has a well established manufacturing base there as the country's leading auto maker, while Dodge, until a few years earlier, had been known as Barreiros. There was an identity crisis.

Dodge has a stronger history in the UK. There is no plan to change to the Renault nameplate there, though company officials recognize they have no divine right to the Dodge name.

The creation of Renault at Villaverde was complex. Until the split there was only one factory, making cars and commercial vehicles. All departments were common, and the name Talbot—given to the former Chrysler-Spain unit—was everywhere. "We simply built a wall down the center of the factory," explains an RVI spokesman.

But RVI did not need half of Villaverde's manpower. It took only 2,600 of the old company's payroll of nearly 11,000.

Swedish Saab and German Porsche together in Spain

Saab and Porsche, both faced with the problem of breaking into the half-million unit car market in Spain, decided to take a joint approach.

Two years ago the Swedish and West German companies created Turbo Motor, based in Madrid, with former Ford of Spain executive Juan Hillegas as business manager. The aim was to establish a dealer network and provide service facilities for Saab and Porsche owners from other parts of Europe holidaying in Spain.

In the first year some 90 Saabs and Porsches were sold. The numbers grew last year to 170 Saabs and 260 Porsches. This year's target — there are now 12 dealers — is 250 Saabs and 320 Porsches.

Despite enormous tax levies, which double prices compared with most of Europe, Hillegas sees a lot more potential for his products. He talks of 400 Porsche and 350 Saab sales in 1984. "It's an immature market for cars," he says. "Things get mixed up. A customer might compare a Saab Turbo with an Opel Ascona simply because of size. It makes Saabs that much harder to sell.

"But with Porsche there is really no competition, on account of the fabulous image," he adds.

McCann-Erickson seeks support for national accounts

Ad agency aims at retail clients

By Joseph Bohn
Marketing Editor

Mc-Cann-Erickson, Detroit, is setting up a new Retail Service Group to go after, among other clients, individual Buick and GMC dealers.

The agency wants to develop a "retail mentality" to complement its work on large, national accounts like Buick and GMC divisions of General Motors, noted Jerry Atkins, executive vice president and general manager of the Detroit office.

Its new Retail Service Group is being officially established June 1.

Several people have been hired. Ken Nobel, formerly with Patten Corp., Southfield, Mich., a dealer agency, is vice president - management representative of the group. James Jarvis is director of sales; Brian Baba is creative writer and manager of a new in-house radio studio, and Jane Watts is group coordinator. Staff will grow to match client needs, Atkins added.

McCann plans to spread out from retail dealer accounts into non-automotive retail areas, Atkins said.

"In Detroit, you're not going to grow by bringing in AT&T," he said. "We're fortunate to have GMC and Buick as clients. We discussed this with them, and they indicated an interest in having us handle their dealers."

The retail concept isn't new for McCann, he added. Its one followed "around the world" with other clients.

In terms of dealer sign-ups, the agency hopes to get one GMC and one Buick dealer in each ADI market area to avoid any conflicts and service them nationally through its nine U. S. and three Canadian offices.

General Motors has a sort of unwritten policy against its divisions' agencies handling dealer associations — which is partly why McCann is going after individual dealers.

Competitive Edge, Albuquerque, N. M., handles the bulk of Buick dealer associations.

"We'll probably start in single-point markets and build our credentials," Noble said. But the dealers can't be too small because, as Atkins noted, "obviously" billings have to be sufficient to defray the overhead.

"So many dealers try to do their own ads or do none at all," he said. "It's like trying to do their own legal work — they're often not qualified and don't have the time."

obituaries

Mary K. Iacocca, 57; Chrysler chief's wife

DETROIT. — Mary K. Iacocca, wife of Chrysler Corp. Chairman Lee Iacocca, died May 15 at the age of 57.

Mrs. Iacocca had been in frail health for some time and had been hospitalized for two weeks prior to her death. The Iacoccas met when she was a secretary for Ford and he was beginning his career as a Ford salesman. Donations may be sent to the Mary Iacocca Fellowship, Joslin Clinic, 1 Joslin Place, Boston, Mass. 02215.

James A. Currie

TROY, Mich.—James A. Currie, 69, vice president of administration, General Automotive Corp., died May 12. Mr. Currie's automotive career began in 1931 with Ford Motor Co.

The Fastest Growing Used Car Consignment System in the Nation

If you were slow to get in on economy cars, rustproofing, and luxury imports, here's another wonderful opportunity for you to miss out on.

On the other hand, it's also a wonderful opportunity for you to redeem yourself.

By becoming a part of the next major trend in the automobile business: Chapman® Security Systems.

Already there are 6,000 Chapman dealers nationwide.

A number that's growing 30% a year.

And will keep on growing. For a very good reason.

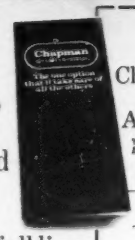
Chapman dealers get a lot of support.

To begin with, they're supported by hundreds of industrious people who work a lot of late hours. Car thieves.

(Last year alone they helped themselves to over a million vehicles. A figure, by any measure, approaching epidemic proportions.)

They're also supported by an aggressive, award winning advertising campaign. A campaign that's appeared in publications no less important than *Time*, *Newsweek*, *Car and Driver*, and *Road and Track*.

They're supported by a complete range of point-of-purchase materials. From posters to car toppers. To window stickers, brochures, and hang tags.



Most importantly, they're supported by a full line of automotive security systems unsurpassed by anything on the market. Systems from Chapman.

Each featuring the new Chapman Generation III Lok.™

If all this sounds like the kind of support you could use, give us a call. But do it soon.

After all, an opportunity like this is too good to miss out on. Again.

Fill me in.

I'm interested in becoming a Chapman dealer ☐, wholesaler ☐. Fill me in on all the details. And send along a free, point-of-purchase start up kit.

High-performance package

Maserati Biturbo due in August at $26,500

LOS ANGELES. — Maserati Biturbo, a twin-turbocharged two-door sedan from Italy, made its U. S. debut at Los Angeles Auto Expo here.

Scheduled to go on sale in August, the high-performance sedan will carry a sticker price of $26,500, according to M. Jeffrey Qvale, vice president of Maserati Import Co. (West) and Maserati Automobiles, Inc. (East), U. S. distributors of the vehicle.

The car is built by the Maserati and Innocenti works run by Alejandro DeTomaso and was introduced in Europe earlier this year.

The Biturbo in U. S. trim is powered by a 2.5-liter V-6 engine with three valves per cylinder and two IHI turbochargers. The powerplant develops 192 HP at 5,500 RPM and 233 pounds-feet of torque at 3,000 RPM.

Riding on a 98.9-inch wheelbase, the front-engine, rear-wheel-drive car uses a five-speed manual transmission. Steering is power-assisted rack-and-pinion and brakes are four wheel disks.

The car is 163.5 inches long, 67.4 inches wide and has a curb weight of 2,580 pounds.

U. S. distribution is being headed by Kjell H. Qvale, who is also chairman of British Motor Car Distributors, of San Francisco. He said the company has approximately 40 dealers signed and he anticipates adding about 10 more by the time the car goes on sale in August.

Volume is expected to reach an average of 300 units per month and total dealer body may reach a high of 75.

Qvale said most of the dealers will be concentrated on both coasts and in Texas, although there will be a few dealers in other major urban areas such as Chicago and Denver.

Ford projects 150,000 sales for Tempo/Topaz

Continued from Page 1

fects showing up in the first two years," a veiled reference to GM's problems with the X-cars.

The Ford chairman noted that Allstate Insurance Co. will apply a 21 percent collision rate reduction and a 27 percent reduction in the comprehensive rate on Tempo and Topaz and added that the cars are equipped with 5-MPH bumpers rather than the required 2.5-MPH bumpers. He said Ford would stick with the 5-MPH bumpers in its product lines.

Ford also reduced the recommendation maintenance schedules for the first 50,000 miles to 10 items and said a survey showed that this compares with 22 for the Mazda 626, 24 for the Toyota Camry and 25 for the Audi 4000.

When questioned after the meeting on the GM-Toyota joint manufacturing venture in California, Caldwell said this was a legal question but added that it seems that the Japanese will be the plant managers for GM and the "losers are the American workers in the U. S."

Hertz orders 15,200 Tempo/Topaz models

NEW YORK.—Hertz Corp. has ordered 15,200 Ford Tempo and Mercury Topaz cars—the largest single order for passenger cars in the history of Ford Motor Co.

"It is the largest single vehicle order Hertz has ever made," said Ford Chairman Philip Caldwell, "and it's also a big vote of confidence for American products."

HD registrations in first quarter lowest since 1976

Continued from Page 14

but the rate of decline was the smallest since the 4.4 percent drop recorded in December, 1981.

Registrations were off substantially from last year in both heavy-truck groups in the first quarter. The Group 7 count was 11,025, down 14.6 percent from the year-earlier 12,910. Group 8 was off 11.5 percent, from 17,506 units in 1982 to 15,496.

Through March, International had a lead of almost 600 units over second place Ford and increased its share of the heavy-truck total by more than 2½ percentage points.

International's three-month total of 6,582 Groups 7 and 8 tallies accounted for 24.82 percent of the industry total, compared with 22.14 percent a year ago on 6,733 units.

Ford's 6,003 tallies through March were good for 22.63 percent of the first-quarter total. Last year, Ford was No. 1 with 6,864 registrations which accounted for 22.57 percent of the total.

The biggest decline in penetration in the first quarter was suffered by GMC. Its share this year was 12.86 percent on 3,411 tallies, down 4.02 points from last year's 16.88 percent on 5,136 units.

First quarter truck registrations up 11 pct. over '82

Continued from Page 14

153. Group 6 was up 2.4 percent, 8,886 versus 8,676.

The Group 7 total was down 14.6 percent to 11,025 units through March, compared with 12,910 a year ago. There were 15,496 Group 8 tallies, a decline of 11.5 percent from the year-earlier 17,506 units.

No. 1 Ford's share of the industry total was 4.39 percentage points higher this year than last, when it finished the first quarter in second place.

Through March, Ford had 189,053 tallies which accounted for 31.92 percent of the total. A year ago, it accounted for 27.53 percent with 147,047 registrations.

Chevrolet was the biggest loser in penetration in the January-March period, a decline of 4.11 points.

Through March, Chevrolet registrations totaled 178,041 units and accounted for 30.06 percent of the three-month count. A year ago, it took 34.17 percent of the total with 182,559 tallies.

Buy/sell show opens July 11

Korean suppliers at World Expo

Nine Korean automotive supplier firms will be a part of the world automotive marketplace at Detroit's Cobo Hall during the second annual Automotive News World Expo, July 11-14.

The four-day international buy/sell trade fair was developed to create an international marketplace for automotive suppliers and manufacturers to meet for business discussions.

All aspects of the automotive original equipment business will be featured under one roof during the show. Scores of automotive suppliers will exhibit their products and services for the attendees and many of the world's major vehicle manufacturers which will be staffing business offices on the show floor.

So far, 124 exhibitors have reserved space at the World Expo to sell automotive components, materials, machinery, design concepts, systems and marketing services. Some 34,600 square feet of exhibition space has been sold.

In cooperation with the Korea Trade Center, nine Korean firms will have booths in 2,000 square feet of space, said Ronald S. Sarason, trade coordinator.

The Korea Trade Center is a nonprofit government organization which promotes import and export trade between the Republic of Korea and other countries. The Detroit-area Korea Trade Center is one of 86 such trade centers in the world and one of 13 in the U. S., according to Sarason.

"The Korea Trade Center participates in shows around the world," Sarason said. "This particular group of companies has never participated together before, however."

The nine Korean companies manufacture a wide array of automotive products.

Bando Sangsa Co., Ltd., will exhibit engine bearings, oil pans, intake manifolds, transmission covers and brake parts at the World Expo. Daewoo Corp. will showcase its engines, forgings, castings, injection pump parts, clutch plates and door hinges.

Dong Yang Machinery Corp. will display transmissions, axle assemblies, propeller shafts, steering gear assemblies and forged products. Han Kook Reeyon Ind. Co., Ltd., will be showing its pistons, piston pins and rings and cylinder liners.

Also with the Korea Trade Center is Hoe Hoon Trading Co., Ltd., which will exhibit weatherstripping and rubber gaskets. Ilsung Battery Co., Ltd., will showcase its batteries while Kolon International Corp. exhibits engine valves, tire and cable chains, hubs, wire harnesses and electrical parts.

Mando Machinery Corp. will display alternators, radiators, shock absorbers, voltage regulators and ignition coils. Rounding out the group is Samsung Co., Ltd., which will exhibit wheel disks, coil and leaf springs, car speakers and oil seals.

• Sarason said, "Korean firms are relatively new to the OEM market and they would like to break into it more. The Korea Trade Center is participating in the World Expo to give people in the automotive business an overall idea of what's available in the Korean market.

"Korea is moving into high-technology goods. These firms have the products and the knowledge as well as very good facilities for production," he said.

Sarason added that Korean companies are moving into major automotive markets, such as Detroit. Three of the nine World Expo exhibitors, Daewoo, Bando Sangsa and Mando Machinery, have offices in the Detroit area.

The World Expo will run in tandem with the eighth annual Automotive News World Congress, an industry seminar which will be held at the nearby Westin Hotel, July 10-13. Together, these events make up Automotive News Week in Detroit.

To pre-register for World Expo and receive a complimentary ticket, or for exhibitor information, contact Automotive News World Expo, 965 E. Jefferson Ave., Detroit, Mich. 48207. Phone: (313) 567-9520. To send a request by TWX, call 810-221-5122 AUTNEW.

Auto production hits 2-year high

Continued from Page 1

last week at Chrysler's Belvidere, Jefferson, Newark and St. Louis facilities, plus the Ford Chicago, Lorain and St. Louis points. The Ford plants also worked Saturday, as did GM's Arlington, Baltimore, Detroit, Doraville, Fairfax, Lansing and Leeds assembly points.

Production of Ford's Escort and Lynx models is slated to end indefinitely today (May 23) at the company's San Jose facility.

All car assembly plants were reported operating last week.

Truck production tops any week since late 1979

Continued from Page 1

assembled 854,628 units, a 9.20 percent gain from 782,626 built in the comparable 1982 period.

Assembly of pickup models was halted indefinitely May 9 at Volkswagen of America's Westmoreland facility. Due to sagging sales and extensive downtime, only 2,079 trucks have been assembled there this year. During the final week of production, 146 units were completed.

Daily overtime was scheduled last week (May 16) at Chrysler Corp.'s Belvidere and Warren facilities, plus Ford Motor's Kansas City and Norfolk points. Kansas City and Norfolk also operated Saturday overtime last week as did General Motors' Detroit (P-model), Janesville, Pontiac and St. Louis plants.

All other assembly points were reported working normal schedules.

Extra holiday at GM trims Canadian output

Early holiday closings at all General Motors facilities pulled last week's Canadian car and truck production down about 10 percent from the previous week's totals.

The car makers estimated 25,213 units last week, down 9.93 percent from 27,994 built the previous week, but output rose 26.67 percent from last year's 19,904 units.

Year-to-date, there have been 402,934 automobiles assembled, a 13.72 percent gain from 354,325 finished in the comparable 1982 period.

Truck output last week reached 10,989 units, a 10.07 percent decline from the prior week's 12,220, and down slightly from 11,059 trucks built the same week last year.

So far this year, the truck manufacturers have produced 206,384 units, down 1.65 percent from last year's 209,851.

All GM facilities were idle last Friday (May 20) for a four-day holiday weekend. GM, plus all other car and truck assembly points, will be closed today (May 23) in observance of the Victoria Day holiday.

Chrysler's Cordoba and Mirada models were built out last week (May 16) at the company's Windsor car facility. Production of the Caravelle, Gran Fury, Diplomat and New Yorker Fifth Avenue models is scheduled to end June 10, and assembly of these M-bodies will be moved to Chrysler's St. Louis facility for the 1984-1985 model year.

The Windsor plant will be retooled for the 1984 front-drive T-115 van/wagon models with production slated to begin in October.

58th year—$40 per year, $1.00 per copy

1st-quarter dealer decline is 48, smallest in 5 years

By John K. Teahen Jr.
Managing Editor

In the first quarter of this year, there was a definite slackening in the loss of domestic new-car dealerships. The total declined by only 48 during the period, according to the latest AUTOMOTIVE NEWS census.

On April 1, the census found 20,751 dealerships handling domestic makes of passenger cars, compared with 20,799 at the beginning of this year.

The dip of 48 outlets in the three-month period was the lightest loss of any quarter since the second quarter of 1979 when 47 points faded away. It was the smallest first-quarter drop since 1978 when the number was 29.

This year's decline compared with first-quarter losses of 276 in 1982, 221 in 1981, 258 in 1980 and 86 in 1979.

Chrysler Corp. fared best during the first quarter of 1983, showing a gain of 27 outlets. American Motors-Renault also was on the plus side with a rise of one.

Dips for Ford Motor and General Motors were considerably smaller than in recent years — 11 for Ford and 50 for GM. Volkswagen was down 14.

That is an aggregate decline of 47 dealerships. A change in the number of intercorporate duals put the net loss at 48 for the domestic industry.

• By comparison, last year's first quarter brought drops of 145 for GM, 78 for Ford Motor Co., 29 for Chrysler Corp., 14 for VW and 12 for AMC. That 278 total became 276 for the domestic industry after adjusting for a change in the number of intercorporate duals.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

It is too early to say that the frightful attrition in the domestic dealer ranks has ended—a single three-month period is hardly the basis for such an assumption.

But there are encouraging signs. Interest rates have dropped, although they are still high, and the overall sales climate has improved. There are indications that the industry and the dealer population are pulling out of the long slump.

The past four years have been rough for domestic dealers. On April 1, 1979, AUTOMOTIVE NEWS counted 23,965 outlets. The drop to today's 20,751 is a dip of 3,214 establishments, or 13.41 percent.

The domestic franchise total rose during the first quarter as 10 makes reported gains and one held steady. Only four makes were down.

Dodge made the biggest advance, adding 50 franchises, and there were gains of 3 to 32 for AMC, Buick, Cadillac, Renault, Mercury, Oldsmobile, Lincoln, Chrysler and Plymouth. Pontiac was unchanged.

There were dips of 6 to 25 franchises for Imperial, Volkswagen, Ford and Plymouth.

Art Center/PPG pace car

After 11 seniors at the Art Center College of Design in Pasadena, Calif., designed this pace car for the PPG Indy Car World Series, PPG and Synthetex built it. The car is built over a stock Camaro Z-28 chassis, with a 350-cubic-inch engine. Story on Page 17.

Impulse 'qualifier' hurts better retailers, they say

Dealers slap Isuzu marketing effort

By Joseph Bohn
Marketing Editor

Some of Isuzu's dealers feel that the importer's marketing efforts this year replay like a silent-era comedy. Confused and disjointed, they frequently had dealers doing a double-take.

Recently, for example, the importer ran an incentive which offered dealers a chance to earn an allotment of a new Impulse with every I-Mark sale.

To their consternation, the company's better dealers found that, following this program, the importer came back with a $500 rebate on I-Marks which essentially rewarded their less-aggressive counterparts while still giving them Impulses to sell.

But that program "is not unlike many others that were worse," according to one dealer, who candidly admitted to submitting bogus delivery cards for I-Marks never sold "that allowed us to earn as many Impulses as possible." (A number of other dealers reportedly fudged on the program in the same way.)

He cited a program where Isuzu offered dealers $600 off on vehicles, then a few weeks later offered $1,000 off.

"We were dealing with somebody off the same (delivery truck). We're at cost and they've got a $400 profit."

Again, the company ran a program for selected dealers in the same area, added another dealer, where "they had to advertise $300 off per vehicle and give away 100 shares of stock, with trucks that cost less than those you had on your lot."

"Some ran the program before we were even offered the program," he said.

• Fritz Kern, national marketing manager for American Isuzu Motors, said the company "took care to make all dealers aware of this (particular) program."

He said he hadn't received any complaints, "via our regional offices."

Kern did confirm that Isuzu held up TV spot advertising on the new Impulse for a week in the Eastern and Central markets because of some delays in shipping. The new car gets about 40 percent of Isuzu's calendar-year dollars for its launch. Magazine and outdoor ran on time.

I-Marks, he added, are being phased out to represent less than 20 percent of Isuzu's mix, beginning this fall.

The I-Mark will continue being offered through the '84 model year, then replaced with an all-new front-drive car, as yet unnamed, which will compete in the same size/price segment.

Impulse is the "new flagship car . . . the sign of things to come for all our new products in the next two to three years," he added.

Some of Isuzu's dealers are clearly unhappy with their profit returns so far. The I-Mark, they say, is a good quality, if unexcitingly dated, Opel derivative, and Isuzu's trucks are "like every other truck on the market."

They also feel that the company may have overdealered in Southern California — Orange County and metropolitan Los Angeles.

Mike Brescini, American Isuzu dealer development manager, expressed surprise at this, saying the company only had 21 dealers in those counties which have a population of 10 million people.

The feeling stems, perhaps, from some of Isuzu's dealers comparing themselves — their volumes and profits — to nearby franchises like Toyota, Datsun and Honda.

Still, a lot is riding on the new Impulse, both for the company and its dealers.

'Auto-recovery' bill introduced in House

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The eagerly awaited "comprehensive legislation to revitalize" the domestic auto industry and "protect American jobs from unfair foreign competition" has been dropped into the hopper and assigned to five House committees.

While the outlook is unclear, it is probably better than for usual packages of reindustrialization and cooperative R&D bills already afloat in Congress.

This is the promised effort of Rep. James J. Florio, New Jersey Democrat, who, in this Congress but not the last, held extensive hearings on the UAW-backed local-content bill before reporting it from his subcommittee in record time.

Ultimately, the fate of the new bill probably depends upon other lawmakers — Michigan's John Dingell, for instance, and other movers and shakers — to see if it takes off and finds a marriage partner in the Senate.

And, of course, recovery in sales of domestic models with at least substantial rehiring in the states most affected by joblessness in the auto sector could take steam out of the effort — just as warm endorsement by labor and a solid push by domestic firms would help. But it is early, and the only certainty is that it is giving the import companies fits.

The Japanese, especially, feel caught — since the local-content bill will be considered by the

Volvo hikes prices $290-$310 on DL, GL

ROCKLEIGH, N. J.—Volvo of America has raised prices $290 to $310 on its DL, GL and diesel models. There was no change in prices of the turbocharged GLT series and the top-of-the-line 760-GLE. GL and diesel models went up $290, the DL two-door sedan rose $300 and the DL four-door sedan and wagon jumped $310. Volvo prices now start at $10,950 for the DL two-door sedan with overdrive.

UAW loses election at Avanti

SOUTH BEND.—Workers at Avanti Motor Corp. defeated the UAW in a representation election by a vote of 57 to 29. "I'm tickled pink the employes of Avanti stood behind the company—and their own future," said Stephen H. Blake, chief executive officer. "Now we're going to build some cars."

Diesel coming for Tempo/Topaz

DETROIT.—Ford Tempo and Mercury Topaz bowed in showrooms last week. But improvements are already in the planning stage for the cars. Charles L. Knighton, company vice president in charge of small car engineering and planning, told AUTOMOTIVE NEWS that next September, following the company's new-model changeover, Tempo and Topaz will

After three years of dwindling sales

Import firms gear up for growth in Japan

By John Hartley
Staff Correspondent

TOKYO. — Imported cars are set for growth in Japan after three miserable years of dwindling sales. BMW is spearheading the challenge, having increased sales 32 percent last year. Jaguar is also determined to repeat its U. S. success.

Encouragement for these plans came from April sales figures, which show that imported car sales increased 2.1 percent over April, 1982. However, only 2,564 imports were registered compared with 221,000 Japanese cars.

In the first four months of this year, 11,109 imports were sold, down 1.7 percent from the same period in 1982.

Although it seems that all imported cars have been doing badly in Japan, with sales dropping from 38,110 in 1981 to 35,508 in 1982, the dwindling sales are evidence of a major market change.

American autos used to dominate the import scene. Following the energy crisis, the Japanese lost interest in gas guzzlers and turned to European cars.

Last year, for example, General Motors' sales in Japan fell 50 percent to less than 2,000 units, Ford Motor Co.'s sales dropped a similar amount to 1,300 units, while Chrysler Corp. sales plummeted from 2,263 to 205.

By contrast, BMW sales leaped 32 percent from 3,600 to 5,293. Then, Mercedes-Benz sales crept up from 5,320 to 5,751, and Audi sales were up from 3,243 to 3,283.

• However, Volkswagen sales continued their slide, as the Golf, which is the main seller, has aged and Japanese small cars have become more competitive. In 1980, 14,000 VWs were sold, in 1981 sales dropped to 12,047, and last year they were down to 11,793.

Therefore, although the market for imported cars has been dwindling, it is the sales of U. S.-built cars that have plummeted—indeed, they are in danger of disappearing from the scene.

In 1979, 28 percent of imports were American; by 1982, they accounted for only 10 percent, whereas German cars accounted for 75 percent. Then, 5.9 percent were British, 3.9 percent Italian, 3 percent Swedish, and 2 percent French.

One reason that imported cars have sold poorly in Japan in recent years has been the poor dealer networks and service backup.

Then, a number of very small companies were importing used cars in handfuls. The result was that these parallel imports were not to the correct specification, so overheating problems were often encountered.

Then, because U. S. cars had left-hand drive, people associated left-hand drive with imports. Although a left-hand-drive car is very awkward in Japan—there are usually barriers alongside the sidewalks, so the driver has to scramble out through the other side — dealers are reluctant to sell imported cars with right-hand drive.

• Yet, many potential customers, especially in the foreign community, will not buy left-hand-drive cars.

Now, though, the situation is looking much better for imports generally. Last year, Yanase, the biggest importer, took over importation of all GM's U. S.-built cars.

Now, Yanase imports all GM products, along with VW, Audi and Mercedes-Benz. It sells through some 80 outlets, and has seven branch offices. Last year it sold almost 21,000 cars.

Ford has set up the Autorama dealer network, which sells Mazda GLCs and 626s badged as Fords and will also import some U. S. Fords as well as the Sierra two-liter from Europe.

BMW bought out its importer in October, 1981, and since has gone from strength to strength. It now sells through 45 dealers, most of whom handle other products than BMW, and last year it sold 5,293 units in Japan, 45 percent more than in 1981.

BL is staking its future in Japan on its new wholly owned subsidiary, Austin Rover Japan (ARJ). For the next couple of years, the 50-odd dealers will have to rely on selling Jaguar cars, but from 1985 onwards, they will be selling the XX car, being developed jointly by Austin Rover Group (ARG) and Honda.

• Largely owing to inflexible organization and the slump in the market, Leyland Japan saw Jaguar sales fall from 750 in 1979 to 420 in 1981, and to less than 300 last year. So, the first job is to regain the lost sales.

The company is relying on the much better quality of Jaguar cars now leaving the factory, although the Japanese are not aware of this yet, and ARJ has an uphill task to convince people that this is the case.

Jaguar's pursuit of perfection, with Japanese-style quality circles and constant vigilance on quality is paying off, as U. S. sales show. Last year, 10,349 Jaguar cars were sold in the U. S., 120 percent from the 1981 figure.

Along with the other foreign manufacturers in Japan, BL has long complained that foreign goods are always segregated from Japanese products in shows, in price lists in magazines and in the minds of Japanese, as if they are things to be seen but not bought.

Peugeot 505-STI for '83

Peugeot's 505-STI for 1983 combines luxury with sporty handling for the practical driving enthusiast. Powered by a 2-liter four-cylinder engine with five-speed manual transmission, the 505-STI has four-wheel disk brakes, rack-and-pinion steering, limited-slip differential, four-wheel independent suspension and heated driver's seat. The only extra-cost option available is automatic transmission. List price is $15,215.

New Oldsmobile boss takes giant stride from Latin American years

By Al Fleming
Industry Editor

LANSING. — It is a long way — in distance and life style — from Latin America to Michigan's capital city.

Few know that better than Joseph Sanchez.

He worked 23 years for General Motors in Central and South America, from a one-man field sales rep operation in Santiago, Chile, to el numero uno managing director at GM Brazil.

Suddenly, on a few days' notice, he hustled from south of the equator to north of Detroit, where April 1 he was anointed head of GM's Oldsmobile Division, headquartered here.

It is a job for which few are considered and fewer are chosen. Oldsmobile is just one of five GM car divisions, and the most successful one, in recent years, in sales and profit growth.

So why Sanchez as general manager of Olds? Other Olds bosses had solid American names like Skinner, Wolfram, Baker and Cook. Or hearty European names like Metzel, Beltz and Kehrl.

Sanchez? Sounds like a side dish at Taco Bell.

"My mother and father came from Spain," says Joseph J. Sanchez, tall, strapping, 6-foot-plus, first-generation American who spent his boyhood on the other side of the subway tracks in the Big Apple. "They met in New York. I was born there in 1930, and lived there until I was 30 years old."

He is now 52 — 53 come November.

• Sanchez takes over the Olds reins from the retired Robert J. Cook. The two are about as alike as tortillas and hotdogs. The staid Cook spent his entire life and GM career in Lansing.

The engaging Sanchez has spent nearly his entire career at GM in Latin America, the last seven as managing director of GM Brazil, headquartered in Sao Paulo. He's been a corporation vice president since 1979.

The new Olds general manager landed his first job with GM in 1954 with what was then called GM Overseas Distribution Corp., in New York City. Just out of the U. S. Air Force, and armed with a degree in foreign trade from City College of New York, he was out of work at a time when jobs were tough to find during the economic downturn following the Korean War.

A cousin told Sanchez GMOD was looking for someone to replace a girl as a letter of credit and filing clerk. He applied for and got the job.

"Right from the start I pointed toward an overseas assignment," recalled Sanchez last week, seated at a conference table in his office at Olds headquarters here. "I majored in foreign trade in college, was bilingual (he now speaks English, Spanish and Portugese, and 'a smattering' of Italian and French) and really wanted to get going on something in a foreign country."

He got his wish in 1960 when he was assigned to Santiago,

At the Olds helm

Joseph J. Sanchez spent nearly all of his General Motors career in Latin America before being appointed general manager of Oldsmobile.

New-car sales in mid-May trail year ago

By Jenny L. King
Staff Writer

Domestic new-car sales for May 11-20 snapped a five-period winning streak as they missed the year-ago total by some 7,000 units.

The daily-selling rate, however, averaged 23,210, fourth best so far this calendar year, and annualized sales figured to 6.3 million.

Mid-May sales of 208,888 were down 3.12 percent from 215,608 in 1982. General Motors was the only major U. S. manufacturer to report a decrease, and that was enough to make the difference between beating last year's industry total or missing the mark.

GM sales numbered 123,397, down 14.33 percent from 144,032 in 1982. Ford Motor Co. sales climbed 5.77 percent, to 47,331 from 44,748. Chrysler Corp. presented a glowing report of sales up 31.36 percent, to 28,034 from 21,341.

American Motors said its estimated mid-month sales were 5,900, up 63.89 percent from the AUTOMOTIVE NEWS 1982 estimate of 3,600. Volkswagen of America was up 49.55 percent, to 2,822 from 1,887, and sales of U. S.-built Hondas totaled 1,404 for the period.

• GM's share of the domestic market tumbled to 59.07 percent from 66.87 percent last year. Ford claimed 22.66 percent, up from 20.78 percent. Chrysler soared to 13.42 percent from 9.91 percent. AMC earned 2.83 percent, up from 1.67 percent; VWoA had 1.35 percent, up from 0.77 percent, and Honda held the remaining 0.67 percent of this year's market.

Eight U. S. makes reported sales increases over year-ago levels. At Chrysler Corp., Plymouth was up 20.03 percent, Chrysler was up 40.84 percent and Dodge was up 37.08 percent. Ford Division was up 6.61 percent and Mercury was up 9.56 percent at Ford Motor Co.

GM's Cadillac was up 8.55 percent, and Oldsmobile dealers retailed eight more cars this mid-May than last. VW was up 49.55 percent.

Year-to-date sales through May 20 totaled 2,414,245, up 6.19 percent from 2,273,411 last year.

New boss promises to operate 'in a fish bowl'

Ruckelshaus brings change to EPA

Continued from Page 2

paper manufacturer, precludes it.

But he will remove himself from the ambient air standards for particulate matter, since diesel vehicles are major offenders.

Other areas in which Ruckelshaus will excuse himself include: Useful life of heavy-duty engines, heavy-duty particulate standards, NOx regulations for light-duty and heavy-duty engines and fuels and fuel additives.

Other areas of mobile source control are all right for Ruckelshaus' participation. These include such areas as auto body paint shops, revised gaseous emissions for 1984 and later heavy-duty engines and light trucks because these are powered by gasoline long-term vehicle emissions control program, and perhaps non-methane HC standards.

So long as Cummins stays in the heavy-duty diesel engine business or merely gets into the medium diesel engine business, the light-duty vehicles will not be exempt by Ruckelshaus.

These matters include: Delay of the 1985 light-duty diesel particulate standard tentatively scheduled for next October, averaging of particulate emissions for 1985 and later light-duty vehicles and assembly line testing for light-duty vehicles.

But should Cummins get into the making of light-duty diesels, then this picture would presumably change — even though Ruckelshaus would have no monetary interest in the company.

The President told Ruckelshaus to ensure that laws are "vigorously enforced," and he added, "We expect nothing less than full compliance with the letter and spirit of the law."

The 1972 noise control law has not been repealed but neither has it been reauthorized or been given any money.

Motorcycle and heavy truck makers are very concerned because the federal law preempted state and local regulations and their nightmare is to be faced with 50 or more conflicting state and local noise regulations. While several recent decisions have held there is federal preemption, this is based on the existence of a federal program that no longer exists.

In this Congress, Senator David Durenberger, the Minnesota Republican who chaired the Senate subcommittee with jurisdiction over noise control, introduced and had the full Senate Environmental Committee report a simple one-year reauthorization of the noise control law with $10 million to have EPA develop and enforce noise emission standards during fiscal 1984.

Meanwhile, on the House side where jurisdiction rests with the House Commerce subcommittee under the chairmanship of Rep. James Florio, New Jersey Democrat, there is no staff assigned to it and so far no plans whatsoever.

Thus, what happens to noise could very well be up to Ruckelshaus—who has said he will enforce the law and presumably he means all laws under EPA jurisdiction.

A newcomer to EPA is Courtney Price, who will be Ruckelshaus' "enforcer" although not his general counsel. Price has been NHTSA's associate administrator for rulemaking, a top job at the safety agency.

Price, along with Lee Verstandig, an experienced administrator from the Transportation Department, was sent to EPA to hold the fort after the departure of Anne Gorsuch Burford.

At this point, Ruckelshaus is the only Senate-confirmed official at EPA and he seems to have firmly taken control.

Escort wins Michigan award

Paula Blanchard, wife of Michigan Gov. James Blanchard, and Louis E. Lataif, Ford Division general manager, inspect a Ford Escort, which was named one of four winners in the Governor's New Product Award competition in connection with Michigan Week. The Escort, judged in the large-company category, was one of 14 finalists out of 33 entries, and now is eligible for national New Product Award competition.

High Court says GM owes $20 million in '46 patent suit

WASHINGTON. — General Motors must pay the patent holder of a steel lubricating process nearly $20 million in royalties and prejudgment interest, the U. S. Supreme Court has ruled unanimously in a patent infringement case dating back to 1946.

In that year, Devex Corp. sued GM, claiming the auto maker had unlawfully used its patented method of coating steel with borax-based lubricant prior to cold-forming it into bumpers. Devex also sued Houdaille Industries, which eventually settled out of court.

In June, 1962, the U. S. District Court for the Northern District of Illinois found Devex's claims invalid. The Seventh Circuit Court of Appeals reversed, however, finding that GM did infringe Devex's patent in certain processes it used to make bumpers and cold-extruded non-bumper parts.

Devex then transferred the case to the U. S. District Court in Delaware, which rejected Devex's infringement claims on the grounds that "no preponderance of the evidence" supported a claim of patent infringement.

The Third Circuit Court of Appeals reversed, ruling that the Devex methods "led to satisfactory lubricity and cleanability, which meant that those practices infringed."

The total royalty award to Devex was $8,813,945.50 with prejudgment interest of $11,-022,854.97, the total award came to $19,836,800.47.

GM appealed the case to the Supreme Court, arguing that "a clear and irreconcilable split" existed between the appeals courts as to prejudgment interest. Most appeals courts, GM claimed, mandate prejudgment interest only in cases of bad faith, and GM was not guilty of bad faith.

The Supreme Court, however, held that "prejudgment interest should ordinarily be awarded absent some justification for withholding such an award."

Exports, imports rise for engines

WASHINGTON.—The United States International Trade Commission said U. S. imports of internal-combustion engines and parts rose from $2.8 billion in 1978 to $3.7 billion in 1982.

The import share of the domestic market increased from 13.3 percent in 1978 to 14.5 percent in 1982. Among the major sources of U. S. imports were Canada, the United Kingdom, Japan, France and Mexico.

U. S. exports of these products increased from $3.8 billion in 1978 to $6.2 billion in 1982. Major U. S. export markets in 1982 were Canada, France, the United Kingdom, Belgium, Japan and Mexico.

Total declines by 48 in first quarter

Tide stemmed on dealership losses

Continued from Page 1

year with 3,637 car dealerships and rose to 3,664 on April 1. It was Chrysler's third gain in the last four quarters and was its best first-quarter performance since 1965.

This year's addition of 27 outlets for Chrysler compares with a dip of 29 in the first quarter of 1982.

In addition to its 3,664 car dealerships, Chrysler Corp. has eight outlets that handle only Dodge trucks. They are not included in the corporation's car-dealer total or in the Dodge car-franchise total.

Ford Motor had 5,403 car dealerships on April 1, down 11 from 5,414 on Jan. 1. It was the company's best first-quarter showing since 1978 and compared with a loss of 78 locations in the first quarter of last year.

Ford Motor has 100 outlets that handle only Ford heavy-duty trucks. They are not included in the company's car-dealer total or in the Ford Division car-franchise total.

Copyright, 1983, Automotive News

For GM, the first-quarter slip of 50 dealerships was only one-third as steep as the 145 that bowed out in the year-ago period. It was GM's lightest quarterly loss since the first three months of 1980.

GM had 10,110 car dealers on April 1, compared with 10,160 at the beginning of the year.

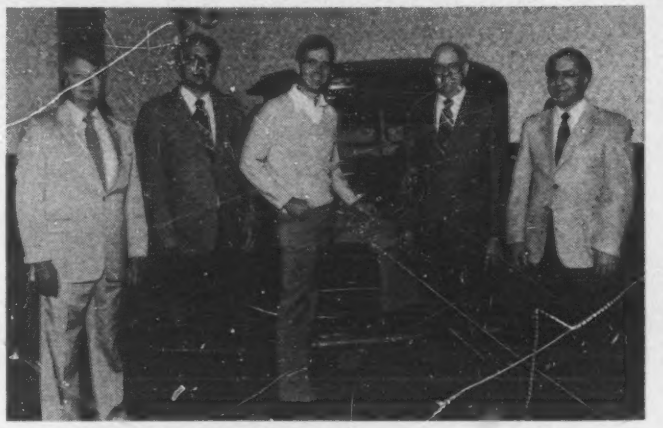
American Motors-Renault had 1,590 car dealers at the beginning of April, one more than on Jan. 1. There are 1,460 outlets for AMC and 1,332 for Renault, but 1,202 of them handle both makes. Thus the AMC-Renault dealership total is 1,590.

Dealer totals for Volkswagen were 920 on April 1 and 934 on Jan. 1.

Going back a year, there were 21,404 domestic-car dealerships on April 1, 1982, so the current total of 20,751 is down 653.

Year-to-year changes show an increase of 9 for Chrysler Corp. and dips of 72 for VW, 204 for Ford Motor and 400 for GM. The current AMC-Renault count is 55 higher than the AMC figure of a year ago. Renault was not included last year because Renault was not a U. S.-built car at that time.

The aggregate decline for the makers is 612. A change in the number of intercorporate duals brought the industry's drop to 653.



50th Anniversary Convention

Attending the Automobile Dealers Assn. of North Dakota's 50th anniversary convention in Fargo were, from left: B. Jack Norby, Norby Rath, Inc., Mandan, president; Gary Browning, M. J. McGuire, Inc., Rugby, director; James Hansen, Hansen Ford Sales, Inc., Grand Forks, vice president; Syl Schumacher, Schumacher's, Inc., Linton, NADA director, and Richard W. Stockman, Stockman Motors, Inc., Williston, immediate past president.

Canadian auto task force urges output commitments

OTTAWA. — More than 80,000 direct auto industry jobs in Canada could be the difference if recommendations made in an auto task force report submitted to Federal Minister Edward Lumley are adopted.

The 80,000 jobs would include 40,000 jobs in the motor vehicle and automotive parts industries with another 40,000 in supplier industries like steel, rubber, glass and textiles. In addition, it is projected, about 50,000 secondary "spinoff" jobs would result from the general increase in auto-related employment.

The task force, initiated to examine issues in the Canadian auto industry, including the loss of 24,000 jobs since the peak years of 1978-1979, is made up of representatives from groups directly involved in auto manufacturing, including the motor vehicle manufacturers, independent parts makers and the UAW.

The task force was co-chaired by UAW director for Canada, Robert White, and Patrick Lavelle, president of the Automotive Parts Manufacturers Assn. of Canada.

The trade policy changes recommended by the task force would require all vehicle manufacturers selling in the Canadian market to make binding commitments — phased over a period of time — comparable to the commitments presently undertaken by automakers operating under the Canada-U. S. Auto Pact.

Vehicle makers which meet these commitments would be allowed duty-free access to the Canadian market.

The objective is to ensure that anyone selling motor vehicles in the Canadian market will make a commensurate commitment to production, investment, purchasing and jobs in Canada.

The trade policy framework also identifies the need for Canada to develop strategies and incentives to encourage the development and expansion of a world-competitive indigenous automotive parts industry in Canada.

"In formulating the trade policy framework," the summary of the report says, "the task force has attempted to find a balance between free trade and protectionism."

The report also emphasizes that its proposals are no different from those already in place in other auto-producing nations.

The trade policy recommendations are a key part of a broad auto policy strategy mapped out in the report which included ongoing consultation between government and industry participants; correction of tax inequities; encouragement of technological innovation; retraining of workers; and provisions to ensure that any structural changes in the industry will occur with minimal negative effects on workers and their communities.

The task force recommends that until such time as the government is able to implement the proposed trade policy framework, the current voluntary restraint arrangement with the Japanese producers should be strengthened and continued.

The task force was created last December. The report itself is an examination of the Canadian auto industry, tracing its development, the effect of the Auto Pact, the impact of offshore competitors and the overall importance of the auto industry to the Canadian economy.

Its findings show that auto manufacturing accounts for 100,000 direct jobs and another 100,000 indirect jobs in Canada and supplies 60 percent of Canada's exports in manufactured goods.

NHTSA allows different type of headlamp

WASHINGTON. — Effective July 1, NHTSA will allow the optional use of headlamps with contoured lens surfaces and a new standardized light bulb.

The move was made in response to a petition from Ford Motor Co.

The new design permitting somewhat more aerodynamic front ends would improve fuel economy slightly and NHTSA says safety would be enhanced by allowing extra bulbs to be carried in a car for immediate replacement.

The options differ from current lamps that use round or rectangular dimensions. In this instance, greater design freedom is given by having no dimensions, but lamp beam patterns and mechanical aiming capability is not changed.

UAW local seeks early talks at Chrysler Canada

WINDSOR, Ont. — The UAW local representing Chrysler Canada workers here said it will ask for a July contract reopening and a $1-an-hour pay boost.

Canadian and U. S. UAW members at Chrysler are under separate one-year agreements expiring in January. In Canada, a master agreement covers all Chrysler locals.

The earliest a U. S. reopener might be acted on is July 28 when the union's Chrysler council holds a routine annual meeting in Huntsville, Ala.

Chrysler Canada said it has the reopener proposal under advisement. But, it said, negotiations on a complete new pact probably will start in November and a July reopener would be unusual.

Bill to revitalize industry starts long road in House

Continued from Page 1

Commerce Committee this week or at latest next week and since a move toward a third year of export restraint has started.

Because the bill involves looking at the antitrust laws with a view toward fostering joint activities, it must be assigned to the Judiciary Committee. Because it involves trade law changes, it goes to the Ways and Means Committee.

Because it involves changes in House procedure meant to streamline action, it goes to the Rules Committee. Because it gets into credit and interest rates, it also goes to the Banking Committee.

But most of all, it goes to the Energy and Commerce Committee.

Except for the central action section on how the International Trade Commission (ITC) should rescue the domestic companies once it finds "injury," the rest of Florio's bill is to set up groups to study problems and recommend solutions.

The main job goes to the Secretary of Commerce — thus the jurisdiction of the Dingell-Florio Committee on Energy and Commerce.

But then there is the industry advisory council (which Florio chairs) and that is composed of four management types from the auto companies, five labor representatives, one representative from the parts industry and two senators and two representatives. This council advises and consents like mad on almost everything — especially the fate of the imports after developing "strategy."

• The guts of the Florio bill — and one that can be viewed as an alternative to the UAW-backed local-content bill if it gets pulled out — involves the ITC initiating an investigation to see if imports are a "substantial cause of serious injury" and threat thereof to the domestic industry and if so, then the ITC can recommend relief by way of tariffs, quotas or domestic content requirements.

The ITC is busy monitoring the auto industry and writing reports on conditions as well as the effects of the remedies it suggests and — Congress or the President — puts in place.

Meanwhile, large parts of the rest of government are taking long looks at the auto industry. There is a task force on currency exchange stabilization. This includes the Secretaries of Commerce, State, Treasury, the Chairman of the Federal Reserve Board, the U. S. Trade Representative, the head of the Congressional Budget Office and the U. S. Comptroller General.

Next comes a study group on antitrust laws, policies, and unfair practices. This has the Secretary of Commerce, the Attorney General, the U. S. Trade Representative, the chairman of the FTC, and the Comptroller General.

These luminaries look at antitrust and joint R&D ventures, joint export activities among domestics and what it is like for the foreign companies.

• Another group that has no real name but consists of the advisory council, the Secretaries of Commerce and Treasury and the U. S. Trade Representative, works out a way to eliminate or reduce tax advantages of the foreign companies.

Here Florio gives some direction: A balancing act between an excise tax on auto products sold in the U. S. and a credit to makers against their federal tax liability; give a tax credit to buyers of domestic makes or those that meet domestic content requirements or promote exports in various ways, and do all of this in such a way to lead to the highest possible auto production and employment in the U. S. and in such a way as to avoid retaliation while taking into account similar programs in foreign countries and their effectiveness.

And how much money does Florio think may be needed? Less than $1 million over five years.

Now, this is a broad approach and a thoughtful one that Florio finds more comfortable than the UAW local-content bill which he has — and for at least a while — will continue to support.

Year-to-date total is 24 pct. ahead of 1982

Auto production slips to 144,459

By Patricia Hoffman
Staff Writer

As overtime schedules wound down last week in preparation for the Memorial Day holiday, domestic car output slipped 6.93 percent from the previous week's total when 14 assembly points worked additional hours.

Last week the makers scheduled 144,459 cars, down from the prior week's 155,218, but up 10.30 percent from last year's 130,964.

Breakdown for the week by company was: General Motors, 58.31 percent; Ford Motor, 23.93 percent; Chrysler Corp., 12.39 percent; American Motors, 2.98 percent; Volkswagen of America, 1.63 percent, and Honda, 0.76 percent.

Year-to-date, there have been 2,605,366 automobiles produced, a 24.43 percent gain from last year's 2,093,802.

Daily overtime continued at five assembly points last week. GM's Detroit facility operated an additional 24 minutes on each of two shifts Monday through Friday.

The Chrysler Belvidere, Jefferson and Newark plants worked two nine-hour shifts, while the St. Louis point operated one nine-hour shift five days last week.

There was no Saturday overtime last week due to the holiday. All facilities are idle today (May 30) in observance of Memorial Day.

Canadian holiday trims production of cars, trucks

Four days of assembly last week due to the Victoria Day holiday pulled Canadian car production down 8.41 percent from the previous week's total. Output, however, soared 23.21 percent above last year's comparable holiday period.

The auto makers scheduled 22,492 units last week, down from 24,557 built the prior week, but up from last year's 18,255.

Year-to-date, the manufacturers have assembled 424,770 cars, a 14.27 percent gain from 371,733 finished in the comparable 1982 period.

Truck output last week, trimmed by the holiday plus changeover schedules at International Harvester's assembly points, was 10,080 units, 5.86 percent below the previous week's 10,707, and down 5.0 percent from last year's 10,610.

So far this year, 216,182 trucks have been assembled, down 1.89 percent from 220,336 at this time last year.

All car and truck facilities were idle Monday, May 23, in observance of Victoria Day.

International Harvester's Chatham and Vancouver assembly points were closed last week for model changeover. Operations there are slated to resume July 25.

All other facilities resumed normal operations last Tuesday.

Assembly of Chrysler Corp.'s Caravelle, Gran Fury, Diplomat and New Yorker Fifth Ave. models continues to fall at the company's Windsor car facility in preparation for the June 10 buildout.

Production of the M-bodies will be moved to Chrysler's St. Louis No. One plant for the 1984 model year. Windsor will then be retooled for assembly of the 1984 front-wheel-drive T-115 van/wagons to begin in October.

Truck production falls for week; 48,300 assembled

Downtime at Ford Motor's Michigan truck facility pulled last week's domestic truck production down 8.43 percent from the previous week's total, but output jumped 10.33 percent from last year's comparable period.

Ouaput last week was targeted at 48,300 units, down from 52,744 built the previous week, but up from last year's 43,779 trucks.

Year-to-date, the makers have manufactured 902,692 units, a 9.34 percent gain from 825,615 produced in the comparable period last year.

Operations at Ford's Michigan truck facility were idle last week (May 23) due to overstocked inventory.

Chrysler Corp.'s Belvidere assembly point operated two daily nine-hour shifts Monday through Friday last week. The company's Warren plant worked one daily nine-hour shift five days.

There was no Saturday overtime scheduled due to the holiday downtime. All truck facilities are idle today (May 30) in observance of the Memorial Day holiday.

Datsun dealer fails in try to stop competitor's move

SACRAMENTO. — Martin D. Morganstern, who has operated Daly City Datsun since May, 1975, lost his effort to persuade the California New Motor Vehicle Board that Martin Swig's Autopacific, Inc., should not be permitted to move Van Ness Datsun to new quarters in San Francisco.

Swig, who owns 88 percent of the Autopacific stock as well as Mazda, Isuzu, Saab and Alfa Romeo dealerships and an ownership interest in a Toyota dealership through a separate corporation, plans to move all of his operations in late June to a huge new San Francisco auto center.

Swig's new operation will be in a 500,000-square-foot building occupying an eight-acre site about 1½ miles south of Van Ness Ave., considered San Francisco's "Auto Row."

"Escalating real estate values have made Van Ness uneconomic," Swig said. "In order to reverse the decline of the retail auto business in our city, we will establish this new auto center.

"Showrooms for the initial five dealerships," Swig said, "will stand side-by-side along a pedestrian concourse. Each dealership will be separately managed and no cross-selling will be permitted."

The parts and service operations will be segregated according to car line while the used cars, body shop and general offices will be consolidated, he said.

In addition to the new-car dealerships, Swig's plans for the auto center call for an auto-buff bookstore, a high-grade auto accessory store and "an elegant espresso bar" as well as a public meeting area to be used by car clubs in the San Francisco Bay Area.

Morganstern hired a law firm and demanded a hearing before Kent S. Hori, administrative law judge for the state board.

In presenting Morganstern's protests, attorney Peter Anderson argued that Daly City Datsun would be adversely affected by Swig's relocation and that the move would also have "an adverse effect on the retail motor vehicle business and the consuming public in the relevant market area."

Morganstern also insisted that Nissan franchises in that market area are providing both adequate competition and convenient consumer care for buyers and owners of Nissan vehicles.

Swig's attorneys told the board that a major reason for moving out of the Van Ness Ave. location was traffic congestion and inefficiency in the service department facilities.

Judge Hori, in his rejection of Morganstern's protest, agreed that by Nissan standards the Van Ness Datsun facilities "for parts, service and customer and employe parking have been inadequate since the mid 1970s."

NHTSA delays comfort fix for seat belts

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Government regulation to make seat belts on cars and light trucks more comfortable and more convenient will be delayed until 1986 models.

NHTSA's final rule means that Safety Standard 208, issued in the dying days of the Carter Administration, has been delayed three years from its effective date for 1983 models — one year by the Reagan Administration in response to petitions for reconsideration and now an extra two years.

NHTSA said the further delay is needed because of "concerns that have arisen within the agency regarding the efficacy and level of stringency of certain of the requirements and because of the unsettled state of future plans for seat belt designs."

This is partly affected, NHTSA said, by the rescission of the passive restraint standard—now pending before the U. S. Supreme Court—because the comfort and convenience standard was assumed to apply to passive belts. And it has questions about stringency that led NHTSA to propose the extra two years last November.

• The further delay was objected to by the Idaho Transportation Department — the lone dissenter — but all the vehicle makers and the American Seat Belt Council supported the delay.

In fact, some auto makers wanted an indefinite stay, but the agency felt a definite time frame would be useful although it also noted it could later make adjustment for leadtime, if necessary.

Ford Motor Co. noted it had been experimenting with a particular seat belt design for nearly two years and is still uncertain whether the design can consistently meet the somewhat conflicting requirements for full belt retraction, 0.7-pound chest force limitation and the retractive force requirements of Standard 209.

In other words, the belt has to be loose enough to be comfortable on the chest but taut enough to spring back into place, and these requirements appear to be in conflict.

Finally, NHTSA said that it is necessary to look at all the restraint standards — including the passive one in litigation — before arriving at a decision about comfort and convenience.

Alfasud successor?

Alfa Romeo's new 33

Although Alfa Romeo is billing its 33 as "all new," there is a lot of carryover in mechanical philosophy from the Alfasud, such as the flat-four engine and five-speed transmission. The 33, which will go on sale this month in Europe, will offer two engine options, each based on the same flat-four-cylinder: 1.3 liters producing 79 HP and 1.5 liters producing 85 HP. Observers believe that the 33 spells the end of the 11-year-old Alfasud. Story on Page 6.

GM, Ford unwrap new cut-rate loans; more programs due

By Joseph Bohn
Marketing Editor

General Motors and Ford Motor Co. were quick to launch new low-interest programs to replace those that expired May 31. Datsun extended cut-rate financing on trucks, and Toyota is offering a new incentive on trucks.

Chrysler and American Motors are expected to announce new programs this week. Chrysler previously extended its low-interest loans and/or rebates through June 10. Volkswagen is not planning any special incentives.

GM's "Buyer's Bonus Program" offers 8.8 percent financing through GMAC on small cars and compact pickups delivered during June 1-30. Contracts run up to 48 months.

Financing applies to Chevrolet Chevette, Cavalier and Citation; Pontiac 1000, 2000 and Phoenix; Oldsmobile Firenza and Omega; Buick Skyhawk and Skylark; Cadillac Cimarron, and Chevrolet S-10/GMC S-15 compact pickups.

Those same vehicles are covered with a higher 9.9 percent APR rate July 1-31.

Dealers contribute 70 percent of their finance reserve toward paying for the lower rate.

On the Chevette/Pontiac 1000 and S-10/S-15 pickups only, consumers have a choice of a $300 rebate in lieu of low-interest financing. There are no dealer contributions to the rebates.

GM also has 11.9 percent financing for up to 36 months and 12.9 percent financing for 37 to 48 months on all other cars and trucks not covered by its 8.8 and 9.9 percent programs.

• The lower rates—8.8 percent and 9.9 percent — are being widely publicized on TV, radio and in newspapers by GMAC, car divisions and dealers.

However, the company is doing no promotion on the 11.9 percent and 12.9 percent flex rates. Dealers also are not required to contribute any of

New Ford models off to fast start

Tempo and Topaz excite dealers

By Joseph Bohn
Marketing Editor

If Ford Tempo and Mercury Topaz sell as well as dealers anticipate, Ford Motor Co. may have its first unequivocally successful car since Escort.

But, given today's competitive market, dealers readily acknowledge that they still face a tough selling job.

As Ed Mullane, Mullane Ford, Bergenfield, N. J., pointed out: "The reality is, we're not the only frog in the pond. In the old days, when Ford had new Falcons and Thunderbirds, there was a waiting list three miles long. Today, it's a new ballgame."

But Mullane, along with a coterie of Ford Dealers Alliance members, who were among those surveyed by AUTOMOTIVE NEWS after introduction, expressed enthusiasm for the new products and their sales potential.

"We (Dealers Alliance) have been critical of Ford for not having the hardware and putting us out in the desert for a long time," Mullane said.

"Now we got it, and it's good. We don't have to take second seat to anybody. People who drive the car fall in love with it. I'd much rather have it than not have it," Mullane concluded.

Indeed, the stream of praise for the products, often coming from erstwhile critics, is itself something of a novelty.

If there was criticism, it was of the cars being launched so close to Memorial Day weekend, when showroom traffic is light — particularly in California. Dealers also found themselves with little stock, all of which left a reading of public reaction somewhat tenuous. Public introduction of Tempo/Topaz was May 26.

• Santa Ana Lincoln-Mercury, Santa Ana, Calif., sits squarely in the middle of import country. Coincidentally, it also had the biggest success of those surveyed, quickly selling out its stock of six Topazes, according to Ken Kaiden, sales manager.

Public awareness of domestic cars must run high in Orange County. Kaiden said one Topaz went to a man who thought Lincoln-Mercury was part of General Motors and Topaz was a foreign car.

"He didn't know what it was — just saw it on TV and came in and bought it," Kaiden added.

The dealership did take two imports — a Volkswagen Scirocco and a Datsun 210 — in on Tempo trades and had people with "Volvos and Mercedes who didn't buy but loved the car," Kaiden added.

"They thought it was a cross between a BMW and a Mercedes. It's just a complete car for us," he concluded.

California Tempos and Topazes have more equipment than in the East and Midwest. Kaiden's early cars averaged $9,300 sticker prices. He sold mostly Topaz GS models.

In other parts of the country, sticker prices were averaging about $8,000.

Of his profit margins, Kaiden said, "We would have discounted the cars if we had to, but we haven't had to yet." He plans to run a media campaign with a $7,488 Topaz as the drawing card.

• In nearby Orange City, Calif., Villa Ford, which steadily ranks among Ford's 100 top-volume dealerships, had seven or eight Tempos but only three cleaned up in time for early delivery.

Owner Herbert Baldwin, said each of his salesmen had "one or two" Tempo orders he was working on. Baldwin praised the mileage, performance and qual-

Bidwell to direct Chrysler marketing

By Al Fleming
Industry Editor

Bidwell's back and Iacocca's got him.

Rumor and speculation ended last Thursday (June 2) when Chrysler Corp.'s board of directors, meeting in New York City, elected Bennett E. Bidwell executive vice-president — sales and marketing of the nation's No. 3 auto company, effective immediately.

Thus, for the first time in nearly five years, former Ford Motor Co. executives Bidwell and Lee A. Iacocca are together again.

Iacocca, now chairman of Chrysler, was fired as president of Ford Motor Co. in July, 1978, by Chairman Henry Ford II. Bidwell left his position as group vice president, car and truck group, North American Automotive Operations, at Ford in 1981 to become president of Hertz Corp.

At Chrysler, Bidwell, 56, succeeds John B. Naughton Sr., 61, who was named executive vice-president, office of the chairman, a new position.

Bidwell will direct sales and marketing for Chrysler Corp. and Chrysler-Plymouth and Dodge Divisions. He will report

breaking news

Chrysler has cash, delays bond sale

DETROIT.—Chrysler Corp. has indefinitely delayed its previously announced plans to sell up to $200 million in bonds to the public to partially finance the redemption of $400 million in federally guaranteed publicly held notes. Chairman Lee A. Iacocca said, "We will pay off the $400 million entirely from our cash reserves. We don't need the bond offering to do the job."

The $400 million payment on June 15 will amount to one-third of the $1.2 billion in guaranteed notes that Chrysler sold between June, 1980, and February, 1981, under terms of the Chrysler Corp. Loan Guarantee Act of 1979.

According to UN study

Latin America is seen as auto expansion site

NEW YORK. — Latin America will probably reap the benefits of expansion by major auto companies into new markets, according to a study by the United Nations Centre on Transnational Corporations.

An in-depth analysis of 22 auto makers also shows that General Motors and Ford Motor Co. are setting the pace "in terms of spreading their transnational network globally and moving toward a worldwide integration of operations."

The report noted that at the beginning of the 1980s, 22 transnational companies accounted for 90 percent of the total auto production. Within the group, 13 had foreign production facilities and all had foreign assembly in their own affiliates or licensees.

While the Centre predicts that many companies will spread their manufacturing globally, strategies for the main auto makers differ considerably. The two nations that show the greatest contrast in approach to world markets are the U. S. and Japan.

While the U. S. corporations are very active abroad, the Japanese have adopted a home-based production posture. As for the Western European companies, Volkswagen, according to the report, is the most active with a dominant position in Latin America.

The report went on to say that the French auto makers "are mainly concerned with consolidating their operations in Europe and establishing a foothold in the U. S." Their operations in developing countries are mainly in Latin America.

Of the two Italian auto makers, only Fiat is active abroad and the Centre reported that "Fiat is concerned with reestablishing its domestic viability and, except for its operations in Brazil and Argentina, seems to have given up major transnational manufacturing ventures."

Western European producers are threatened within their home markets by two forces, the Centre said: The development of world cars by the U. S. manufacturers and the success of the Japanese in exporting to Europe.

While the Centre could not be sure what the response of these corporations and nations would be to this threat, it did say that "a mixture of innovation, relocation, mergers and retrenchment supported by protectionist moves to stave off the most severe competitive pressures may be predicted."

The Centre said that Latin America, particularly the larger, more developed countries, will reap the benefits of the expansion by the auto transnational corporations. It stressed that this would be followed "much farther behind" by the industrialized nations of Asia, Africa and the less developed Latin American nations. The Latin American nations that seem to be specifically targeted for growth are Brazil, Mexico and Argentina.

But the Centre noted that the Japanese, while developing foreign activity, "may well tend to rely more on the developing countries of Southeast Asia and Africa than U. S. firms have done."

McDermott Chevrolet goes bananas

An ad in a New Haven (Conn.) paper read: " '75 Datsun 710, 4-door—yours at McDermott for only $1,572 bananas." The ad caught the eye of high school student Anne Munroe, who telephoned McDermott Chevrolet to ask if she could really purchase the car for 1,572 bananas. When told that she could, she purchased the bananas for $250 and traded them for the car. The bananas have been donated to charity.

2,764 vehicles recalled in three Ford actions

DEARBORN. — In three separate actions, Ford Motor Co. is recalling 2,764 cars, light trucks and four-wheel-drive vehicles.

Ford is recalling 1,923 of its 1983 F-250/350 Series light trucks built at the Kansas City Assembly Plant and equipped with 6.9-liter diesel engines for replacement of bolts that attach sound insulation to the left front apron.

"The bolt is too long and could contact and damage the fuel line in a severe front-end collision," said John P. King, service engineering manager, Ford Parts and Service Division. If fuel line damage resulted in fuel leakage, there would be danger of a fire.

Ford is also recalling 544 '82 Ford Granadas and Mercury Cougars with 2.3-liter propane-fuel engines for inspection, and, if necessary, replacement of the fuel tank retaining strap.

King said that a supplier shipped straps with inadequate spot welds, which could cause the tank to drop out of position. Fuel leakage could then occur and the potential for a fire would exist, he said.

In the third action, Ford is recalling 297 '83 Ford F-250 and F-350 Series 4WD vehicles with 6.9-liter or 7.5-liter engines for possible installation of a new bolt and nut in the vehicle frame.

"A Ford supplier shipped frames to our Twin Cities (St. Paul) Assembly Plant that may have included an incorrect rivet at the joint attaching the main crossmember to the left siderail and steering gear liner," King said.

Ford has also notified the owners of 11,719 '83 Ford LTD and Mercury Marquis cars that it will install luggage compartment decklid lamps.

Standard equipment on the LTD and Marquis, these lamps were inadvertently omitted during early 1983-model production at the Chicago Assembly Plant, according to King.

U. S. vehicles are prizes in Arizona lottery

PHOENIX. — Arizona's Cash & Cars lottery is offering 191 new, American-made vehicles from 28 dealerships throughout the state as prizes.

Players who get three car symbols on their $2 lottery ticket choose another ticket from a drum at the lottery office which determines what car has been won.

If a person refuses to accept one of the more expensive cars, cash will be given so that a lower-priced car can be purchased.

In addition to the new car offered to the instant winners, an estimated 25 percent of the retail price of the car will be given in cash to cover income tax, license and fees.

Study sees little 1983 recovery, but 1984-85 looks good

Overseas auto outlook called flat

LONDON. — The short-term fundamentals of the world economy provide little support for a recovery in the car industry during 1983, according to a report by Data Resources International (DRI), formerly Economic Models Ltd.

With the exception of North America, where gathering recovery will prompt a reversal of trends, the report said, the current year will prove little better than 1982.

Japan will see volume increase, although growth will be modest and from a high base, DRI said. For Europe, unemployment, energy and car prices will be the major issues affecting car purchase and ownership over the forecast period. With sales momentum slowing in France and Italy this year, total European sales and production will barely exceed last year's total, according to the study.

Recent product spending by the industry stands starkly against the constrained short-term-demand outlook, the report continued. Overcapacity will make it impossible for some participants to earn an adequate return on this investment, it said.

DRI said, however, that the medium-term outlook provides a brighter prospect. As the North American recovery gathers pace and that of Europe follows, the industry will draw sustenance from its traditional areas of strength.

World economic recovery will allow the strong underlying demand for private transportation to be translated into new high levels of car sales, DRI said, adding that as consumer confidence is restored, 1984 and 1985 will witness a strong recovery for the industry.

The report said that in Germany, with the outlook for private consumption weak, and unemployment rising, short-term indicators argue against any rapid turnaround in car demand. The domestic market will improve this year by 3.1 percent, DRI predicted, but real growth in domestic demand will not occur before 1985.

The car market is in the forefront of French sectors bearing the brunt of the government's new austerity package, and the French consumer will be unable to finance sales volumes approaching last year's record levels, according to DRI.

Growth in the car population will slow substantially in the 1980s from its trend growth rate of the 1970s, although car densities will exceed 420 cars per thousand population by 1988 as falling and stable energy prices help maintain the impetus of motorization, according to DRI.

The current sales boom in the UK, DRI said, is supported mainly by the private purchaser, enticed by HP deregulation, low interest rates and incentive campaigns.

UK manufacturers are far from happy with the profit implications of the incentive measures; unlike the situation in the U. S. — where incentives are also rife — it is record sales which are being made unprofitably in the UK, not sales 40 percent below trend, the report said.

• As for Italy, the report said 1983 will witness a further contraction of new-car sales from the record levels of two years ago, a payback on the circumstances which maintained volumes late into the Italian recession: Low car prices, inflationary pre-buying and strong replacement demand.

The Spanish car market will continue to underperform its long-term potential as economic performance remains weak over the next five years, DRI predicted. Slow growth of the market has dismayed the multinationals; when the General Motors investment in the S-car plant was first proposed, it was expected that the Spanish market would reach one million units annually by the mid-1980s.

In the short term, DRI takes a fairly conservative view of the prospects for a strong recovery in U. S. car sales. Loan rates for car purchases will barely change, and with the slow economic recovery making no impact on unemployment, the industry will suffer a payback from recent promotions featuring cut-rate financing and lower prices.

DRI expects the recovery of the U. S. car market only to appear in earnest in the third and final quarters of 1983.

The period of rapid growth of the Japanese automotive industry has been brought firmly to a close with the current worldwide recession, the report explained. Growing maturity of the Japanese marketplace, combined with slower world growth, trade restrictions and a higher yen in export markets, will slow the progress of the Japanese industry throughout the forecast period, DRI said.

The aero look

Ford Motor Co.'s 1984 Mark VII will feature new aerodynamic headlamps with replaceable bulbs. The application is made possible by a change in the federal headlamp standard.

ITT names three to expanded roles

BLOOMFIELD HILLS, Mich. Charles L. Peters, Vincenzo Russo and Edgar C. Setter have been appointed to positions of greater responsibility at ITT Corp.

Peters was named group general manager of Higbie Industries, Rochester, Mich., with responsibility for operations of Aimco, Higbie Manufacturing, Lester Industries and Suspension Systems.

Russo was appointed group general manager of Hancock Industries, Ann Arbor, Mich., with responsibility for operations of Automotive Electrical, Hancock Engineered Products, Milrod Metal Products, Thompson Metals and United Plastics.

Setter, president and general manager of ITT Automotive Distributors, Cedar Knolls, N. J., was assigned additional operational responsibility for Western Automotive Warehouse Distributors.

58th year — No. 4971

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson Avenue, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation, 48611.

Month's new-car tally is 724,911

March registrations top '82 by 15.86 pct.

By Jenny L. King
Staff Writer

New-car registrations in March were up a sizzling 27.48 percent over February's level and were up a respectable 15.86 percent over March of 1982, but they were down compared with the month in 1981 and the years preceding that backing up to 1975.

Figures compiled by R. L. Polk & Co. revealed a March, 1983, new-car-registration total of 724,911, up 27.48 percent from 568,663 a month earlier, and up 15.86 percent from 625,964 in March a year ago.

Domestic registrations reached 505,677, up 30.37 percent from 387,874 in February. They were 12.34 percent ahead of the 450,-119 posted for the month in 1982.

Imports claimed 30.24 percent of the total market, according to the Polk figures, a record for the month. Registrations of new imports numbered 219,234, up 24.86 percent from 175,575 the preceding year.

Chrysler Corp. and the imports were the only segments to enjoy a gain in market share this March compared with a year earlier. Chrysler was up 1.65 percentage points, to 10.47 percent from 8.82 percent. Imports accounted for 30.24 percent, up 2.18 percentage points from 28.06 percent.

General Motors dropped 2.12 percentage points in March, to 42.16 percent from 44.28 percent. Ford Motor Co.'s 16.33-percent share was down 1.18 percentage points from 17.51 percent. American Motors was limited to 0.79 percent, compared with 1.29 percent in 1982, and miscellaneous domestics accounted for 0.01 percent, down from 0.04 percent.

(Editor's Note: Polk counts Renault Alliance as an import instead of including it in the AMC total. Polk also counts the Volkswagen Rabbit as an import.)

Of the domestics-only market, 60.43 percent belonged to GM in March, down from 61.55 percent a year ago. Ford had 23.42 percent, down from 24.34 percent; Chrysler was up 15.01 percent from 12.26 percent; AMC dropped to 1.13 percent from 1.80 percent, and miscellaneous domestics pinched off just 0.01 percent, down from 0.05 percent.

• In March, imports claimed the biggest segment of the market-class total, with 30.24 percent. Second were intermediates at 25.12 percent, followed by compacts at 15.94 percent, standards at 13.83 percent, subcompacts at 9.71 percent and luxuries at 5.16 percent.

A year earlier the breakdown was: Imports at 28.06 percent, intermediates at 20.14 percent, compacts at 20.18 percent, standards at 9.06 percent, subcompacts at 17.78 percent and luxury models at 4.78 percent.

Total registrations for the first quarter of 1983 were up 12.39 percent, to 1,888,868 from 1,680,-629 last year. New domestics were up 9.76 percent, to 1,297,-807 from 1,182,356. Imports were up 18.62 percent, to 591,061 from 498,273.

During the first three months of 1983, Chrysler Corp. and the combined imports claimed greater shares of the total than they did a year earlier. Chrysler was up 0.89 percentage points, to 9.33 percent from 8.44 percent, and imports gained 1.64 percentage points, climbing to 31.29 percent from 29.65 percent.

In contrast, GM dropped 1.94 percentage points, to 41.84 percent from 43.78 percent; Ford was off 0.06 percentage points, to 16.67 percent from 16.73 percent; AMC dropped to 0.86 percent from 1.37 percent.

Greenwald slaps government spending

Auto appreciation week in Missouri

ST. LOUIS. — During Missouri's Automotive Appreciation Week, Gov. Christopher Bond stepped up efforts to attract more suppliers to the state.

One of the week's events was a banquet attended by more than 800 people at which Gerald Greenwald, vice chairman of Chrysler Corp., spoke.

Greenwald lashed out sharply at critics of the U. S. auto industry, saying that "quietly it has become one of the country's leading high-tech areas."

Greenwald expressed his fear that Washington would spend the country into another downturn.

"It really is time that somebody locked up the Federal Government's charge card," he said.

"There will never be certainty in the credit markets, or in the minds of the consumers, until the government gets out of the business of being the nation's largest and most reckless borrower.

"These days, it's not often that people in any industry hear a simple, heartfelt 'thank you' for the work they do that helps provide Americans with the dignity of a well-paying-job," Greenwald said.

"The auto industry isn't the only party deserving of praise tonight," Greenwald said. He said that everyone in Missouri deserves to share in the achievement of returning the state to the No. 2 position in automotive production and helping to create or preserve 100,000 auto-related jobs.

Greenwald declared that Chrysler was "turned around" because everybody who had an interest in the company's survival stuck to a formula of hard work and equality of sacrifice.

• "The auto industry learned quite a few lessons in the last four years, and some of them were very painful," he said. "And nobody learned more lessons than Chrysler did.

"But when you stop to think about it, the industry has responded with phenomenal speed in fixing its problems over which we have control. We fixed them by looking reality squarely in the face, and then acting . . . in record time," he said.

However, Greenwald was worried "about what's in store for us in a couple of years. Will the next dip in the business cycle be the one that does in the auto industry? The steel industry? Textiles?

"It could happen — and quicker than we might imagine — unless Washington faces up to three major and unaddressed problems left over from this last recession: Budget deficits, energy and trade," he said.

Greenwald's remarks culminated a busy day for Gov. Bond, who hosted management and labor executives through assembly plants in Kansas City and St. Louis.

Accompanying Bond on the plant tours was Owen Bieber, UAW president, who promised to continue efforts for local auto content and not yield to any concessions in wage bargaining.

Bond said, "The new spirit that's emerged in Missouri will strengthen Missouri's No. 2 role in the nation's auto industry. The most important factor in the success of the auto industry in this state is the pride and productivity of Missouri workers."

During Automotive Appreciation Week, opportunities in the state were pointed out to out-of-town suppliers.

"In order to do business with automotive manufacturers who have adopted the just-in-time system, suppliers must locate their operations near the assembly plant," Bond said.

V. J. Adduci, MVMA president, and Howard H. Kehrl, General Motors vice chairman, also participated in the events of the week.

Missouri sends trees to Detroit makers

ST. LOUIS.—Missouri Gov. Christopher Bond dispatched eight hawthorn trees to be planted at General Motors, Ford Motor Co., Chrysler Corp. and American Motors.

It is hoped that the trees, which bear the Show-Me-State's flowers, will thrive in their new environments and act as a symbolic link between St. Louis and Detroit.

Hawaii calls

Gerald H. Cutler, center, attended signing ceremonies on the mainland marking the opening of his new Chevrolet dealership, Rainbow Chevrolet, Inc., Honolulu. Sharing the occasion were George C. Davis, left, assistant zone manager, and Dan S. West, Oakland zone manager.

TOTAL IMPORTS	184,067	169,833	771,866	712,763

30.24 percent of March registrations

Import market share reaches peak

By Jenny L. King
Staff Writer

Registrations of new imported cars took a record share of the total U. S. market in March and climbed to 31.29 percent of the three-months market, according to figures compiled by R. L. Polk & Co.

Import registrations of 219,234 in March, 1983, represented 30.24 percent of the month's total new-car registrations. It was a record penetration, wiping out the former March high of 28.06 percent set a year earlier when registrations totaled 175,575.

In numbers alone, import registrations were up 24.87 percent in March, to 219,234 from 175,575.

Year-to-date import registrations totaled 591,061 through March 31, 1983, representing 31.29 percent of the total and up 18.62 percent from 498,273 for the same period a year ago. First-quarter market penetration last year was 29.65 percent.

R. L. Polk & Co. counts U.S.-built Volkswagen Rabbits, American Motors/Renault Alliances and Ohio-built Honda Accords as imported passenger cars, and now includes a U. S. category in its countries-of-origin breakout. AUTOMOTIVE NEWS retail sales figures enumerate these domestic-built products as domestics. Polk also separates Alliance from other Renault products.

In March of this year, Nissan slipped past Toyota to capture first place among the imports. Nissan claimed 20.82 percent of the import market, up 2.01 percentage points from 18.81 percent a year earlier. Toyota dropped 2.52 percentage points, to 20.52 percent from 23.04 percent.

• Third-place Honda lost 2.12 percentage points, Mazda was off 0.38 percentage points and had fourth place, followed by Renault Alliance in fifth with 6.20 percent of the import market.

Subaru was sixth, Volkswagen was seventh, Volvo was eighth, Mercedes-Benz ninth and BMW 10th. Only Volvo increased its market share, up 0.29 percentage points.

The top 10 imports laid claim to 88.58 percent of the month's market, down from 89.66 percent a year earlier.

First-quarter import registrations were up 18.62 percent compared with 1982 totals, to 591,061 from 498,273.

First-place Toyota was down 1.50 percentage points, to 21.40 percent from 22.90 percent. Nissan gained 2.08 percentage points, climbing to 20.52 percent from 18.44 percent. Honda was off 2.84 percentage points, Mazda was up 0.16 percentage points, and Subaru was down 0.94 percentage points.

VW was off 1.43 percentage points, Volvo was up 0.13 percentage points, Mercedes was off 0.23 percentage points and BMW was up 0.17 percentage points. Renault Alliance joined the top 10, in sixth place, and Audi dropped out.

The major importers held 88.98 percent of the market, down from 89.88 percent last year.

• Japan remained the top U. S. importer, although it slipped to 73.45 percent from 77.61 percent of the market. The U. S. soared to second place with its 9.75 percent up dramatically from 4.60 percent. Germany was third at 9.73 percent this March compared with 9.93 percent for the month in 1982.

Numbers of imports from each country were as follows:

	March, 1983	March, 1982
Japan	161,017	136,261
United States	21,376	8,075
W. Germany	21,336	17,433
Sweden	9,812	6,925
France	3,600	4,180
Great Britain	1,125	620
Italy	910	1,846
Ireland	58	235

Statistics for registrations, country of origin, first quarter '83 compared with first quarter '82 were:

	3 Mos., 198'	3 Mos., 1982
Japan	437,868	387,306
W. Germany	59,528	50,925
United States	53,695	23,200
Sweden	24,959	19,461
France	9,644	10,612
Great Britain	2,999	1,755
Italy	2,227	4,072
Ireland	141	942

Registrations of new imported trucks in March dipped 0.72 percent, to 35,916 from 36,176. The breakout by major manufacturer was as follows:

	March, 1983	March, 1982
Toyota	11,533	11,194
Nissan	8,790	7,654
Mazda	5,726	2,816
Dodge Ram 50	2,339	4,302
Others	7,528	10,210
Total	35,916	36,176

Year-to-date truck registrations, January through March, were up 1.23 percent, to 102,371 from 101,125. Totals included.

	3 Mos., 1983	3 Mos., 1982
Toyota	33,208	30,698

Total	102,371	101,125

Profits grow for Ford Credit in Australia

MELBOURNE. — Ford Credit Australia capitalized on Australia's record vehicle market in 1982 with a pre-tax consolidated profit of $2 million for the year.

The company earned $1.8 million pre-tax in 1981.

The continued improvement followed a bad year in 1980 when large credit losses led Ford Credit in the U. S. to inject a "profit maintenance payment of $3.3 million and act as guarantor for Ford Credit Australia to maintain the Australian offshoot's position as a public borrower.

In 1980, operating profit was $1.5 million. After allowing for the $3.3 million injection the effective loss was $1.8 million.

Finance industry observers say the improved public confidence that followed the decision of the U. S. parent to act as guarantor for Ford Credit Australia was a major factor in the company's improved results.

Ford Crelit Australia's managing director, Mike Auld, said that in line with the record year for the industry in Australia, and with the leadership gained by Ford vehicles, Ford Credit's gross financing volume reached $690 million and the level of gross receivables rose to $397 million at year end, an increase of 23 percent over 1981.

Olive drab monster

Art Arfons is running this jet-powered former Army ambulance in truck pulls around the country. Arfons, who drove his Green Monster home-built jet car to land speed records, is shaking the car down. He'll turn it over to his daughter who will compete in pulls—in a nurse's white uniform, according to Firestone Tire & Rubber Co., tire supplier to Arfons.

Debut of Tempo and Topaz finds dealers ecstatic

Continued from Page 1

ity of the cars and felt they'd do very well in their segment.

Closer to metro Los Angeles, Sachs Lincoln-Mercury had four Topazes and delivered three.

"The wiring was screwed up on one or we would have delivered that too," said General Manager Bob Sorenson.

He used adjectives like "great" and "super" to describe Topaz, but candidly admitted it was too early to tell what kind of import conquestor it might be.

In other parts of the country, some Ford dealers felt Tempo would eat into Escort sales, while others thought it would cut into Mustang and LTD. Most looked for some cannibalization to take place.

Ed Newman, Newman Ford, Salem, N. H., considered Tempo a better car than Escort.

He cited quality, performance and styling, adding: "The car looks smaller than it is. You don't realize it has room for five until you get in it."

Like other dealers, he felt getting people to test-drive the car was the key to selling it.

Newman's Tempos were stickered at $7,500-$8,000, and he said his "salesmen and customers perceive the car as an excellent value for the money. It's gotta be the best thing ever made."

• John Squires, general sales manager, Pasquin Ford, East Rutherford, N. J., said he'd like to see Topaz priced a little lower in relation to Escort.

He was one of the few who mentioned styling as being "a little controversial. People either love it or they don't."

He added, though, that "those who drove it seem to be impressed. Particularly with the automatic. It's much peppier than some of the other small-car automatics."

Peter Griffin, Griffin Ford, Greenwich, Conn., said, "We feel very good about the car, and very optimistic about its sales.

"I've been a Ford dealer for 25 years. If I see something I don't like, I'm not bashful about being critical. But everything I've seen has really turned me on. Ford has come out with some cars I had to walk away from, but this one I'm really proud of."

Customer reaction, he added, favored the four-door version. Tempo, he felt, was roomier, more comfortable, with better acceleration than Escort.

And Ron Yates, sales manager for Koons Ford, Falls Church, Va., said: "We can't get enough of them on the grounds. As soon as they come in, they're gone."

He predicted Tempo would account for 25-30 percent of his sales mix. The dealership retailed an unusually high 500 cars and trucks in May, and is one of Ford's top-volume dealers.

"The only problem is availability," Yates said. "We're the largest retail Ford dealership, and we have only one Tempo on the grounds.

"We've had nothing but good feedback from customers. It opened up a whole new range. We're getting a lot of traffic from people who aren't driving Fords," Yates concluded.

Sunrise dealer

Dennis Higginbotham, right, is the new dealer-operator of Sunrise Oldsmobile-Toyota, Inc., in Daytona Beach, Fla. Here he signs his Oldsmobile franchise agreement in the company of John Martabano, zone manager.

Makers schedule 128,868 cars; 15 plants work overtime

Holiday cuts week's car production

By Patricia Hoffman
Staff Writer

Last week's holiday offset overtime schedules at 15 assembly points, pulling domestic car production down 14.84 percent from the previous week's five-day total.

Output last week was slated at 128,868 units, down from the prior week's 151,322, but up 16.64 percent from the 110,481 units built in the comparable 1982 holiday period.

Breakdown for the week by company was: General Motors, 57.58 percent; Ford Motor, 23.50 percent; Chrysler Corp., 14.05 percent; American Motors, 2.67 percent; Volkswagen of America, 1.46 percent and Honda, 0.74 percent.

Year-to-date, the makers have assembled 2,741,097 automobiles, a 24.40 percent gain from last years 2,203,465.

All car facilities were idle last Monday (May 30) in observance of Memorial Day.

Daily overtime was scheduled last week at GM's Detroit point. The facility operated 24 additional minutes on each of two shifts.

Also on daily overtime was Chrysler Corp.'s Belvidere, Jefferson, Newark and St. Louis points. St. Louis worked one daily nine-hour shift Tuesday through Friday, while the other three facilities operated two daily nine-hour shifts four days last week.

Ford's Atlanta, Chicago, Lorain and St. Louis plants worked Saturday. Also working Saturday were GM's Lansing, Flint, Arlington, Fairfax, Lordstown and Baltimore plants.

All other facilities operated normal eight-hour shifts four days last week.

Car output rises to 24,023 in Canadian plants

Canadian auto production last week rose just 4.84 percent from the previous shortened holiday week's total due to downtime at Ford Motor's St. Thomas car assembly point. Truck output jumped 14.04 percent from the prior week's four-day figure.

The auto makers scheduled 24,023 units last week, up from 22,915 built during four days the previous week because of the Victoria Day holiday. Output also rose 12.33 percent from last year's 21,387.

The truck makers targeted 12,359 units last week, up from 10,837 built the previous holiday week, but down 2.21 percent from last year's 12,638.

So far this year, there have been 229,298 trucks completed, down 3.58 percent from 237,812 built in the comparable period last year.

The Ford St. Thomas car point was idle last week (May 30) due to overstocked inventory.

International Harvester's Chatham and Vancouver facilities remained closed for model changeover. Operations there, idled May 23, are scheduled to resume July 25.

All other car and truck facilities returned to normal five-day operations last week.

Assembly of Chrysler's Caravelle, Gran Fury, Diplomat and New Yorker Fifth Ave. is slated to end following the last shift Friday (June 10), at the company's Windsor car point. Production of those models will be moved to St. Louis for the 1984 model run. The Windsor plant will be retooled for assembly of the 1984 front-drive T-115 van/wagons scheduled to begin in October.

Overtime heavy, but holiday trims truck production

Despite overtime schedules at 10 assembly points, and the return of Ford Motor's Michigan truck plant, holiday downtime pulled last week's domestic truck output down 10.70 percent from the previous week's five-day total.

During four days of assembly last week, the makers targeted 42,447 units, down from 47,535 the previous week, and down 1.26 percent from last year's 42,987 units.

All truck facilities were idle last Monday (May 30) in observance of Memorial Day.

The Ford Michigan truck point returned last week (May 31) following downtime to control overstocked inventory.

Saturday overtime was scheduled last week at Ford's Kansas City, Lorain, Norfolk and Twin Cities plants. Also working five days were General Motors' Janesville, Lordstown, Pontiac (S-truck) and St. Louis facilities.

Chrysler Corp.'s Belvidere point worked two daily nine-hour shifts Tuesday through Friday, while the Warren facility operated one daily nine-hour shift four days last week.

All other assembly points resumed normal eight-hour operations on Tuesday.

Party marks 75th birthday of Stillman & Hoag Buick

ENGLEWOOD, N. J. — Stillman / Hoag Buick marked its 75th anniversary and more than 750 persons attended a reception held at the dealership here.

The dealership, founded in 1908, has been a family-operated business since its inception. Walter Stillman, board chairman of the company, attributed its success to "good management, a good product and good public relations," which Stillman said meant service.

Lloyd E. Reuss, general manager of Buick, and James Perkins, general sales manager of the division, presented the Stillmans with a plaque from General Motors marking the occasion.

Encased in the plaque was a letter from GM Chairman Roger B. Smith, and President F. James McDonald noting that it "seems appropriate that two such partners in sales and service began operations at about the same time." GM marks its 75th this year as well.

Reuss noted that the organization "has exemplified excellence in their approach as evidenced by the success they have earned."

Walter Stillman added that out of the 180 employes of his operation, which includes two subsidiaries and a soon-to-open Ford dealership, one third have been with the company more than 10 years. And employes are another key to success, he said.

Stillman explained that his father started the company in 1908 with Buick, Locomobile and Haynes cars. It has been a family business and his son, Robert, the third generation, is president and runs the operations. The fourth generation will be joining the business soon.

Robert Stillman termed the day "super" and added that today with more-sophisticated cars and more demanding customers, dealers have to offer more in the way of service to customers in order to succeed.

New Delaware law protects dealerships

DOVER, Del. — Gov. Pierre S. du Pont IV has allowed legislation regulating auto dealerships to become law without his signature, according to the governor's press secretary, Robert W. Perkins.

The measure protects dealerships by restricting the rights of manufacturers to establish a new dealership within seven miles of an existing dealership in New Castle County and 10 miles in Kent and Sussex counties.

Muisenga's 25th year

ELMHURST, Ill. — Albert Muisenga, Elmhurst Motors, Inc. (Ford) received a 25-year dealer award.

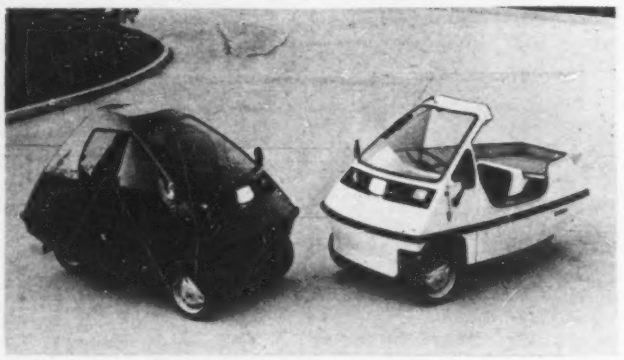
Japanese 3-wheelers



Zeroing in on Zoe Zipper

These three-wheel Japanese-built vehicles, called the Zoe Zipper, are being marketed in the U. S. by Zoe Motors, Inc., Los Angeles, for about $3,500. Weighing about 370 pounds, the Zipper is just under seven feet long, four feet wide and 4½ feet high. Powered by a 5-HP Honda motorcycle engine, the Zipper can reach 45 MPH, and fuel economy is estimated at 112 MPG. Story on Page 6.

Inventory steady at 1.2 million; sales rate higher

Car supply now 47 days

By Richard A. Wright
Assistant Managing Editor

The day's supply of new cars continued to decline during May to the point where a number of lines were in short supply June 1.

The June 1 domestic new-car inventory totaled 1,194,510, a 47-day supply, compared with the month-earlier stockpile of 1,193,296, a 53-day supply. The smaller days-supply figure June 1, despite the slight increase in the unit count, was the result of a higher selling rate.

A year earlier, the domestic new-car inventory totaled 1,212,727 on June 1, which was a 52-day supply.

General Motors, American Motors and Volkswagen of America trimmed stockpiles during May and all the corporate makers opened June with lower days-supply figures than a month earlier.

• GM had a 42-day supply of new cars June 1, down from 49 days a month earlier. GM was still very short of Corvette, Cutlass, Olds 88 and 98, but surprising shortages developed in Skyhawk, Cavalier and Pontiac 2000.

Ford Motor Co. opened June with a 57-day supply, down from 64 days a month earlier. Ford's stockpile included still-short supplies of the new Tempo and Topaz.

Chrysler Corp. had a 53½-day supply June 1, down from 59 days May 1. The corporation's stockpile was generally well-balanced, and was heavier in big cars than small.

AMC had a 45-day supply, unchanged from a month earlier, as it has managed to build a somewhat stronger inventory of its hot-selling Alliance. The maker's supplies of Concords and Spirits were nearing the vanishing point.

VWoA trimmed its stock during the month from 91½ days to 63 days June 1. American Honda had a 24-day supply of U. S.-built Accords June 1, up from 16 days a month earlier.

The June 1 domestic inventory was divided this way: GM, 53.78 percent; Ford Motor Co., 26.31 percent; Chrysler Corp., 15.12 percent; AMC, 2.74 percent; VWoA, 1.78 percent, and Honda, 0.27 percent.

A month earlier, the domestic inventory was divided as follows: GM, 55.89 percent, Ford Motor Co., 24.12 percent; Chrysler Corp., 14.99 percent; AMC, 2.85 percent; VWoA, 1.98 percent, and Honda, 0.17 percent.

• By size class, the domestic new-car inventory was in better balance than ever. The industry had 46-day supplies of subcompacts and compacts, compared with a 59-day stock of subcompacts and a 49-day supply of compacts a month earlier.

It had a 50-day supply of intermediates June 1, unchanged from a month earlier, a 43-day stock of standards, down from 47 days, and a 49½-day supply of luxury cars, down from 53 days.

The June 1 domestic inventory was divided this way by market segment: Subcompact, 17.18 percent; compact, 21.53

Steyr-Daimler-Puch due to buy Utah firm for $10 million

DeLorean near sale of Logan Mfg.

By Edward Lapham
Senior Editor

Copyright, 1983, Automotive News

John Z. DeLorean is close to a final agreement to sell his Logan Mfg. Co. to a group headed by Steyr-Daimler-Puch AG for $10 million, Automotive News learned last week.

The former auto executive, who faces federal drug trafficking charges in Los Angeles, has been trying to sell the Utah-based maker of snow-grooming equipment for several months (Automotive News, Feb. 28, 1983).

Terms of the tentative agreement, due to be consummated before July 25, call for a new corporation to acquire from DeLorean all land, equipment and other assets of Logan, except cash on hand, for $6 million in cash and a $4 million, 11 percent land contract on land and other capital assets, Automotive News sources said.

Logan Mfg. is a division of DeLorean Mfg. Co., which is a wholly owned subsidiary of Cristina, a Nevada corporation that is owned entirely by John DeLorean. DeLorean Mfg., originally John Z. DeLorean Corp., also was the corporate parent of DeLorean Motor Co., now in Chapter 11 bankruptcy proceedings in Detroit (story on Page 2).

The name was changed when JZDC acquired Logan from Thiokol Corp. on June 28, 1979, for $9.1 million. That transaction, however, did not include the land, which DeLorean acquired separately in a swap for a portion of his avocado farm in San Diego County, valued at more than $4 million.

A new U. S. unit of Steyr-Daimler-Puch likely will be the majority shareholder in the new corporation which will acquire Logan. Another shareholder likely will be a U. S. subsidiary of an Austrian bank and its U. S. affiliate which are involved in the transaction.

Georg Zamorsky, Steyr-Daimler-Puch spokesman in Vienna, told Automotive News last week the "acquisition is still pending" and that "final decisions" on some of the mechanics of the transaction "have not yet been made."

Steyr is an Austrian company which manufactures bicycles, mopeds and firearms as well as automotive products. The company is involved in several worldwide joint ventures.

It is a partner in truck production with Toyota in Nigeria, builds four-wheel-drive minibuses for Volkswagen, supplies 4-wheel-drive components to other manufacturers and produces the G Wagen, developed in conjunction with Mercedes-Benz, which has military applications.

Steyr also had a joint venture with BMW to produce gasoline and diesel engines. However, BMW bought out Steyr's share one year ago.

The pending sale of Logan is likely to generate some interest in California. When it was disclosed in Automotive News in February that DeLorean was interested in selling Logan, Assistant U. S. Attorney James Walsh went to court and asked to have DeLorean's bail raised, claiming he was a flight risk.

Logan also has been the focus of inquiries by the U. S. Internal Revenue Service and other investigators who suspect the company may have been acquired with funds originally intended for the sports-car project (Automotive News, March 28, 1983).

In April, it was disclosed in federal court in Los Angeles

Service Index shows another monthly gain

By Francis J. Gawronski
Service Editor

Service and parts business in new-car dealerships continued on the upside in April, according to the Automotive News Service Index, but the rate of growth slowed fractionally.

Shop volume in April amounted to 103.6 percent of the business conducted in April, 1982. In March, dealers' service and parts business was 103.9 percent of the year-earlier volume.

However, business in both months was better than the volume in February when it dipped to 99.5 percent of that done in February, 1982.

As in the previous month, four of the five indicators used in the Service Index showed gains in April. The number of repair orders written declined again in April — down 1.8 percent — for the third consecutive month.

The indicator showing the biggest increase was gross profit on all labor, parts and accessory sales — the most important indicator from the dealers' viewpoint — up 6.9 percent, followed by sales of all parts and accessories, which advanced 5.6 percent in April.

Total labor sales (customer-paid and warranty) increased 2.3 percent, while shop parts sales (those used on both customer-paid and warranty work) were up 0.1 percent over the year-earlier volume.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.

For the first four months of 1983, service and parts volume was 103.8 percent of the volume for the same period a year ago.

Gross profit showed an increase of 5.6 percent, followed by labor sales, up 4.0 percent, while shop parts sales advanced 3.7 percent.

Sales of all parts and accessories were up 3.1 percent, while repair orders written declined 1.9 percent for the period.

SERVICE INDEX
103.6*

	April, '83 vs. April, '82	4 mos., '83 vs. 4 mos., '82
Gross Profit on All Labor and P&A Sales	+ 6.9%	+ 5.6%
Repair Orders Written	− 1.8%	− 1.9%
Total Labor Sales (Customer & Warranty)	+ 2.3%	+ 4.0%
Shop Parts Sales (Customer & Warranty)	+0.1%	+ 3.7%
Sales of All Parts and P&A	+ 5.%	+ 3.1%

*—Survey by Automotive News shows that dealers' service and parts business in Apr., 1983, was 103.6 percent of business in Apr., 1982. Service business in the four months of 1983 was 103.8 percent of business in the corresponding period in 1982.

May nets 630,044

New-car sales increase third month in row

By Jenny L. King
Staff Writer

Domestic new-car sales were up for the third consecutive month in May and their annualized selling rate, based on the final 10-day period, climbed to an encouraging 7.38 million units.

Sales of imported cars were up 8.82 percent for the month. They accounted for 24.69 percent of the total market, up slightly from 24.52 percent a year earlier but far from the record of 28.58 percent set in 1981.

Sales of U. S.-built cars totaled 630,044 in May, up 7.87 percent from 584,074 last year. It was the highest monthly total in 26 months—best since March, 1981, when 719,367 new cars were sold in a flurry of rebate and incentive activity. It was the best May since 1979 when sales reached 797,008.

Import sales reached 206,517, up 8.82 percent from 189,784. Combined sales totaled 836,561, up 8.11 percent from 733,832 in 1982.

Year-to-date domestic sales were up 7.39 percent by the end of May, adding to 2,666,877 compared with 2,483,394 last year. In the first five months of 1983, imports were up 8.42 percent, to 978,553 from 902,552. Combined sales showed a 7.66-percent improvement, pushing to 3,645,430 from 3,385,946.

• Everything was coming up roses for the U. S. auto makers last month. Only General Motors failed to surpass its year-o sales mark, but it missed by only 1.39 percent. American Motors had most reason to celebrate: AMC sales shot up 123.88 percent, fueled by its hot-selling 1983 Renault Alliance. AMC reported sales of 18,291 this May, compared with 8,170 in 1982. Renault Alliances numbered 12,163, 66.50 percent of AMC's total.

In May, GM dealers retailed 378,677 passenger cars, down 1.39 percent from 384,015 last year. Ford Motor Co. was up 10.41 percent, to 136,896 from 123,987. Chrysler Corp. gained more than 22,000 units and was up 36.99 percent, to 84,391 from 61,603. Volkswagen of America climbed 34.96 percent, to 8,501 from 6,299, and Honda reported sales of 3,286 Accords from its Marysville (O.) plant.

For the month, GM dropped more than 5 percentage points in its share of the domestic market, to 60.10 percent from 65.75 percent. Ford was up to 21.73 percent from 21.22 percent. Chrysler jumped to 13.40 percent from 10.55 percent. AMC claimed 2.90 percent compared with 1.40 percent, VWoA edged to 1.35 percent from 1.08 percent and Honda held the remaining 0.52 percent this year against nothing a year earlier.

Ten domestic makes reported sales increases during May. Plymouth was up 36.00 percent over last year, Chrysler was up 43.97 percent and Dodge was up 35.45 percent. Ford was up 9.61 percent, Mercury was ahead by 17.15 percent, Buick was up 0.38 percent, Cadillac was up 8.70 percent, Oldsmobile was up 6.91 percent, Pontiac was up 7.00 percent and VW was up 34.96 percent.

Depressed sales were reported for Imperial, down 74.73 percent; Lincoln, off 4.75 percent; Chevrolet, down 12.45 percent, and AMC, down 24.99 percent.

Cadillac enjoyed its ninth consecutive month of improved selling rates, and its best May in five years. Buick sales moved past their '82 level to a record 81,234 from the former best of 80,925.

• Imported-car sales, up for the fifth straight month this year, included May records for Jaguar, Mercedes-Benz, Saab and Volvo.

Alfa Romeo sales doubled, BMW was up 12.93 percent, Jaguar sales doubled and were an any-month high, Mazda was up 21.16 percent, Nissan was up 10.83 percent, Peugeot was up 20.68 percent, Porsche was up 28.46 percent and Toyota deal-

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson Avenue, Detroit, MI 48207. Second class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation, 48911.

Incentives offered by Mazda East and Mitsubishi

Mazda East and Mitsubishi have joined Toyota, Datsun and domestic makers in launching new incentives.

Mazda East is running a "tournament of champions" incentive on trucks from June 19 to Sept. 30. Dealers have one total program objective covering all '83 trucks, with fleet and lease units eligible.

Between zero and 50 percent of objective earns dealers $300 per unit, and 50 to 100 percent earns dealers $400 per unit. For 101 percent and over, they earn $600 per unit, non-retroactively.

Mazda East distributes Mazda vehicles in 18 states.

Mitsubishi's program calls for 9.75 percent APR financing for June only on LS models of the Cordia and Tredia. To be eligible, a customer must trade in an imported car or truck on the purchase.

The discounts are entirely factory-funded.

Jim Pingree

Racing 'round the Ren Cen

Police estimate that between 175,000 and 200,000 people were on hand to watch a field of 26 Formula One cars race through Detroit streets. Michele Alboreto was the first to complete the 60 laps of Grand Prix II. Keke Rosberg was second by seven seconds and last year's champion, John Watson, was third.

Detroit's Grand Prix called huge success

DETROIT. — Promoters and city officials put an "unqualified success" label on the second Formula I race through the streets of this city. Detroit Grand Prix III is scheduled for next year with dates still being negotiated.

Police estimated 175,000 to 200,000 were on hand for the Sunday culmination of three days of practice, qualifying and a variety of auto racing.

A year ago, the estimate was placed at 100,000 and the future of street racing here was in doubt.

A Grand Prix Expo featuring auto-related consumer goods was held in Cobo Hall on the riverfront adjacent to the 2.5-mile-long race course. That no-admission-charge exposition attracted about 60,000 and will be repeated in 1984.

Winner of the principal race, the Detroit Grand Prix, was Italian Michele Alboreto driving a British-built Benetton Tyrrell powered by a Ford Cosworth V-8. Alboreto averaged 81.158 MPH.

Robert E. McCabe, president of Detroit Renaissance Grand Prix, said paid attendance for this year's race day was 71,000, compared with 52,000 in 1982.

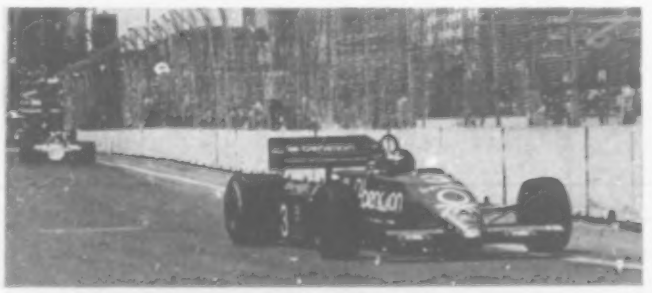
There were hospitality facilities sponsored by 41 companies this year, compared with just four the year before, he said.

Some 600 temporary jobs were created by the '83 event compared with 400 such jobs last year, he said.

A grand prix slated for September in New York has been delayed until Sept. 23, 1984.

"Due to the complexity of obtaining the necessary consent to conduct a New York Grand Prix and the difficulties of completing a new circuit with all its facilities by Sept. 2, Mayor Ed Koch and the organizers, New York Grand Prix, Inc., have asked the motorsport governing bodies to delay the race until Sept. 23, 1984," promoters said.

"The Formula I Constructors Assn. supports the delay," they said.



Alboreto chases the checkered flag

Detroit Grand Prix II was the second Grand Prix victory for Italian Michele Alboreto, who drove a Benetton Tyrrell powered by a Ford Cosworth V-8. Alboreto, driving the leading car pictured above, average 81.158 MPH for the 154-mile race.

V-8-6-4 suit is ruled OK for class action

TRENTON, N. J. — The New Jersey Supreme Court ruled last week that a suit pending against General Motors on the Cadillac V-8-6-4 engine can be certified as a class action and returned the case to lower courts for further action.

With that ruling, the court opened the way for 8,400 New Jersey purchasers of 1981 Cadillac Sevilles equipped with that engine to have redress.

General Motors has been fighting cases in 13 states on this engine but this is the first that has been certified as a class action though applications have been filed in other states for similar status.

A spokesman for General Motors said that the ruling "does not involve a determination that there is anything wrong with the V-8-6-4 and the court only ruled that the case may continue procedurally as a class action."

He added the "plaintiffs must prove their claims at a trial and General Motors intends to defend itself vigorously."

This ruling involved a case filed in New Jersey in February, 1981. The consumers have alleged that the engines hesitate, stall, catch fire or fail.

The plaintiffs, led by Morris Plains attorney Adrian Karp, are seeking to have compensation and reimbursement for expenses and repurchase by General Motors if the engine is proved to be defective.

The Supreme Court ruling also affirmed a lower court ruling that the plaintiffs have the right to bring fraud complaints into this action since they are maintaining that General Motors knew it would offer the engine for only one year and did not make this known to the purchasers.

Karp termed the ruling unique and forward looking in the area of product liability.

No trial date has been set.

Ex-dealer fined for selling 22 non-Calif. cars

SAN DIEGO. — A $110,000 civil penalty has been levied against a former auto dealer here who allegedly sold 22 cars which did not meet California emission requirements.

Superior Court Judge Gerald Lewis ordered Wallace F. Bilyeu and his firm, Safeway Rent-A-Car, Inc., to pay $77,000 for violating the state's smog control laws and $33,000 for unfair business practices.

According to the California Air Resources Board, an investigation was launched following complaints from other dealers. Investigators charged Bilyeu with importing and selling new cars from dealerships in other states, including Oregon, Nebraska, Utah and Arizona.

The judge ruled that the sales not only violated the state's smog control laws, but also represented unfair competition to other dealers who comply with California's standards.

The illegal imports consisted of 18 1979 and 1980 Hondas, three 1980 Oldsmobile diesels and one 1980 gasoline powered Volkswagen Rabbit.

'39 model driven by daughter of chewing gum magnate

'Mint-condition' Bantam used today

SCOTTSDALE, Ariz. — First-time visitors to the Tom Chauncey Arabian horse ranch here must be puzzled when they see a tiny car, hardly more than a toy, driven by a woman along the ranch's roads.

The car is an American Bantam roadster. The woman is Dorothy (Deedie) Chauncey, owner of the car and daughter of Phil Wrigley, chewing gum magnate. Wrigley gave the 1939 roadster to his daughter in Geneva, Wis., on her 14th birthday.

"Ever since that day, I have enjoyed driving this car around our properties and using it as a teaching tool for the children and grandchildren," Chauncey said. "With its stick shift and short clutch, it was an excellent tool for teaching the children to drive."

For Chauncey, the birthday gift was an opportunity to drive a regular car on her parents' property in Wisconsin without the need of a driver's license. Today, she still drives it around the sprawling ranch and only occasionally into Scottsdale.

Despite its age, the car registers only 3,400 miles and is in mint condition.

The car's original appearance is intact, except for a change in color from battleship gray to cream and the installation of sealed-beam headlights.

On rare occasions, Chauncey has pushed the car to 65 MPH. She said that it is designed to reach 80 MPH.

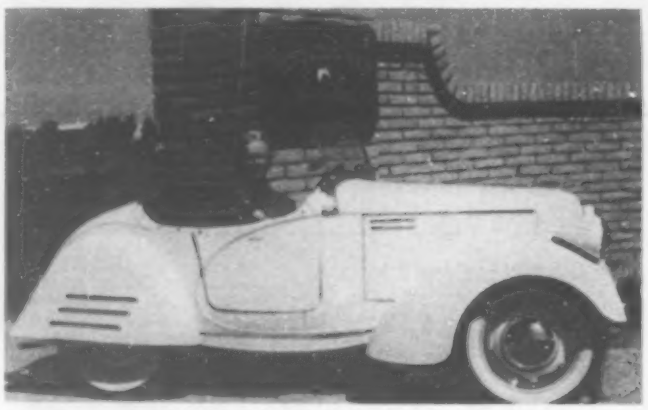
The car, which was aimed at economy operation, was a product of American Austin Car Co., organized in 1929 to build and market a U. S. counterpart of the successful British Austin 7.

Most Americans laughed at the car when it was introduced in 1930 as a second car, and the depression provided the coup de grace when Americans simply could not afford a second car.

The car did not sell and American Austin plunged into receivership after only 20,000 cars had been built.

In 1936, the company was revived by a Florida auto dealer who called the new company American Bantam Car Co. Nearly 7,000 cars were built between 1937 and 1941.

Chauncey isn't about to sell the car. For her, it is a delightful momento of the past and a most pleasant gift from her father.



Bantam roadster a teaching tool

Dorothy Chauncey stops her 1939 American Bantam roadster at the entrance to her family's 160-acre Arabian horse ranch in Scottsdale, Ariz. She was given the car on her 14th birthday and uses it today to teach her grandchildren to drive.

Auction profits may help museum reopen in 1984

BOSTON. — In 1975, the Museum of Transportation moved from its elegant but crowded headquarters on the Larz Anderson estate in Brookline to a Boston warehouse.

For years it struggled to raise funds, then closed last year, $500,000 in debt.

In a year, the museum has reduced its debt to $220,000. In late May of this year, the museum held an auction and sold some of its collection, which may get it out of the hole and back to the estate's carriage house.

Some of the antique cars which were sold were a 1923 Autocar Depot Wagon for $10,500, a 1919 Studebaker Special Six Touring Car for $8,000 and a 1926 Willys Touring car for $2,200.

The museum's reopening is planned for next spring.

Taiwan looks to BL, Volvo to succeed GM truck firm

By John Hartley
Staff Correspondent

TAIPEI, Taiwan. — The Republic of China is hoping that either BL or Volvo will make a last minute bid for the contract to build heavy trucks in Taiwan.

T. K. Lu, chairman of China Steel Co., and the man behind the project, wants a new company to take over the fixed assets of the joint venture from which General Motors withdraw last year. Both BL and Volvo have indicated interest, but neither has submitted a plan—and time is running out.

So far, the four leading Japanese truck makers—Hino, Isuzu, Mitsubishi and Nissan Diesel—have put in bids for the contract, but the Chinese would prefer a European company to be involved. But there are many deterrents, not the least of which is the failure of the company set up by GM and Hua Tung.

The main problem facing the operation is the fairly small volume—about 10,000 units a year. However, the Chinese expect the mainstay of the range to be a 16-ton GVW four-wheeler.

Lu says it will not be economic to produce the transmission in Taiwan, but he is hoping that the company will assemble engines here. He envisages that by selling engines for industrial, marine and agriculture use, volume could be boosted to an economic level.

Lu explained that the price of the trucks produced by Hua Tung was so high that they could not compete with imports.

"They requested a complete ban on imports," he said. "But that could not be done. The cost of transport in Taiwan would have become too high."

GM subsequently withdrew, and 1,000 trucks and buses are now being assembled from the remaining kits. These are due to be finished by the end of June, and the company will be wound up. Lu wants the new company to take over the fixed assets of the old one and to make trucks in the same plant.

Lu hopes that the plant will turn out a range of trucks from 5-6 tons GVW upwards, but he acknowledges that the market is not big enough for a complete range.

The difficulties facing potential manufacturers are increased because there are no prospects for exports, Lu admitted. In addition, any company involved in Taiwan stands little chance of getting established in the potentially more lucrative market in mainland China.

Nevertheless, Lu said, "We hope BL and Volvo will submit presentations."

In any event, he hopes to decide on the new project by the summer.

AMC's chief calls GM link a good deal for Toyota

Japanese challenged by Tippett

WASHINGTON. — American Motors will take on Japanese auto makers in their own backyard, Chairman Paul Tippett said here.

Speaking to the National Press Club, Tippett said the company's new joint venture to produce four-wheel-drive vehicles in China — Beijing Jeep Corp. — will give AMC a strong manufacturing base for competing head-on with the Japanese in Asia and the Pacific area.

"That region has been the world's fastest-growing market for four-wheel-drive vehicles," he said. "We believe this new joint venture will change the face of the auto industry in Asia. We will be competing more effectively with the Japanese on their own turf."

Under questioning, Tippett said that while AMC has not opposed the GM-Toyota joint venture to make cars in California — now under review by the FTC — it also has not praised the move.

But he added it is a good deal for Toyota, now restricted in its exports to the U. S. by the "voluntary" agreement made by the Japanese government. In addition to the 600,000 units Toyota now exports, he said, it would be able to sell an additional 300,000 units with half the parts exported from Japan.

He likened it to an additional sale of 150,000 units with very little investment by Toyota. Tippett said there was no doubt in his mind that any jobs replaced in California would be fewer than the jobs lost when GM stopped making the Chevette in Wilmington, Del.

AMC — unlike GM, Ford Motor Co. and Chrysler Corp. — has no equity in any Japanese company.

• On the matter of local-content legislation — now starting to move in Congress — Tippett came out sounding more like Chrysler than like GM or Ford. Even though he views local content as a "last resort," he noted the late Al Capone had said that more can be accomplished by a kind word and a gun than by a kind word alone. He added he thought the 90-percent requirement in the current UAW-backed bill may be too high and would penalize U. S. companies outsourcing for cheaper parts.

He did not comment on the pending bill introduced by New Jersey Rep. James Florio that sets no percentages for local content. Tippett feels that neither Nissan nor Honda — a "more progressive company" — would have started manufacturing in the U. S. without pressure and he speculated that passage of local content "may be necessary." The Canadian "local-content" proposal, he felt, was too severe.

Asked about reports from the Pentagon that the Hummer — a new AMC military vehicle — demonstrated poor performance and maintainability, Tippett said the "leaked" report was for prototypes tested 9 to 12 months ago for the specific purpose of finding flaws. AMC has now verified "fixes." These now need to be approved by the Army and all of this has been done with no expense to the taxpayer, since AMC has not yet been paid.

• In speaking of AMC's agreement with the Chinese, Tippett said, "The days when a major company could hope for long-term international success while limiting itself to domestic production and exports are gone.

"No major company should expect to participate in foreign markets if its activities are limited to selling products and taking the profits home, without investing in the host country. And our friends in Japan had better get that through their noggins."

The auto executive called for a more cohesive and aggressive U. S. trade policy to combat the growing trend of export subsidization and protectionism among many industrialized countries.

New-car market shows increase 3rd time in row

Continued from Page 3

ers sold six more cars this year than last, sticking close to their import quota.

Imports no longer claimed the largest segment of the total market. That piece went to U. S. intermediates with 26.70 percent, followed by imports at 24.69 percent, compacts at 16.57 percent, standards at 13.56 percent, subcompacts at 13.17 percent and luxury models at 5.31 percent.

A year earlier, intermediates had 24.09 percent, imports took 24.52 percent, compacts had 17.78 percent, standards had 11.63 percent, subcompacts had 16.04 percent and luxuries took 5.94 percent.

In the domestics-only market this May, intermediates represented 35.45 percent, compacts had 22.00 percent, standards had 18.01 percent, subcompacts had 17.49 percent and luxury models held 7.05 percent.

Third-period domestic sales exploded 19.78 percent in May, to 252,748 from 211,013 last year. With eight selling days both years, the daily rate was up 19.78 percent as well, from 26,376 to 31,593 — best daily average since 36,233 in mid-March, 1981.

All the major domestic makers were up for the period. GM climbed 12.48 percent, Ford was up 22.18 percent, Chrysler was up 38.87 percent, AMC was up 145.73 percent, VWoA was up 7.27 percent and Honda was credited with estimated sales of 1,000 units.

Luxembourg facility for Rochester products

ROCHESTER, N. Y.—Rochester Products Division of General Motors has established a fuel, valve train and emissions systems engineering facility at the General Motors Engineering Applications Center in Bascharages, Luxembourg.

E. Michael Mutchler, general manager of Rochester Products, said the facility will enable the division to apply technology developed in the U. S. to the exhaust emissions and fuel economy requirements of Europe.

$1 billion project abandoned

Ford won't construct car plant in Portugal

By Richard Feast
European Editor

LONDON. — The decision by Ford to abandon its proposed $1 billion car assembly plant in Portugal comes as no surprise.

Ford has been toying with the idea of expanding its European auto making capacity since the late 1970s.

The latest initiative was announced last July, when Ford delivered a letter of intent to build at the Sines industrial complex and port. It called for a 200,000-unit factory, which would have represented the largest industrial investment in Portugal.

But when the final go-ahead was postponed to the middle of this year, the project looked doomed.

The decision, announced June 3 by the Portuguese Government, came just over four years after Ford abandoned an earlier plan to build another European car plant.

That initiative, at a cost of $650 million, saw Ford discussing sites with authorities in Portugal, Austria, France and Spain. It was shelved in April, 1979.

Ford said the latest decision was taken because of the slow recovery of the car markets in Europe. Such a large financial commitment could not be justified on current growth patterns.

But a spokesman denied suggestions from the U. S. that it was part of an overall cost-cutting exercise.

"As far as Europe is concerned, we have not curtailed any model programs," the spokesman said. "For the past three years we've been spending $1 billion a year, and we plan to spend similar amounts over the next three years."

• Whether Ford has finally shaken off the idea of building another factory in Europe is less certain. A lead time of three to four years would be required before production could roll from an all-new facility.

While senior executives at many of Ford's rivals could not understand the company's obsession with building the Portuguese plant, the fact that such plans have been in existence for so long leads observers to believe that Ford has not completely abandoned expansion hopes in Europe.

Last year it manufactured 1.41 million passenger cars in Europe. Its record was 1.67 million in 1979, and with recent modernization of existing plants its current capacity stands at around 1.7 million.

Ironically, the announcement came at a time when unofficial figures circulating within the industry suggest that Ford has maintained its European market lead into April.

The figures give Ford 497,500 sales, a 13.1 percent market share for the four months.

Other provisional figures give Renault 461,200, Volkswagen 462,600, Fiat 447,500, Peugeot 434,700 and General Motors 424,800.

The total market stood at 3.788 million, an increase of 1.7 percent. April's market fell by 3 percent to just under 976,000.

Museum auctions off 52 rare old cars

AUBURN, Ind.—The Auburn-Cord-Duesenberg Museum, Auburn, Indiana, had a spring housecleaning sale. Fifty-two cars were sold at auction for a total of $93,450. The highest amount paid for a car was $12,000 for a 1933 Auburn 8105 sedan.

The museum has been owned and operated since 1973 by Auburn Automotive Heritage, Inc., a non-profit organization. More than 140 cars are on display.

Fireworks due in DeLorean bankruptcy case

Continued from Page 2

the reorganization plan, despite earlier assurances by Gorman that the former auto executive is not involved.

The committee wants the court to order the $100,000 good-faith deposit posted by Gorman forfeited to the estate. The creditors committee believes the $100,000 came from the coffers of a DeLorean-owned company.

In the show-cause hearing, attorneys for the bankrupt DMC will want to know why the joint receivers, Sir Kenneth Cork and Paul Shewell, have not produced the documents relating to their claim against the estate and demanded in a May 10, 1983, subpena ordered by the court.

• Although the Los Angeles Federal Court drug trafficking charges against John DeLorean and the Chapter 11 status of his defunct auto company are not related, the two cases will likely become entwined again this week.

Howard L. Weitzman and Donald M. Re, two of DeLorean's attorneys in the drug case, have become increasingly involved in the bankruptcy case. They have attended and participated in sessions where former DMC directors and lawyers have been deposed under Rule 205 of the Bankruptcy Code in order to protect the rights of their client.

In the Rule 205 interrogations, the creditors committee is seeking to determine if any company funds, which could have been used to satisfy creditor claims, have been misappropriated.

Weitzman and Re had the request for a protective order filed in order to keep certain information disclosed by former DMC director Eric Javitz and other witnesses from being made public.

James Walsh, the assistant U. S. attorney in Los Angeles who is prosecuting the drug case, could appear in Bankruptcy Court here this week either in person or through counsel, to argue against the protective order, according to sources on the West Coast. A protective order would prevent the government from having access to whatever information was garnered in the depositions.

Krogh heads Chevy deal

BUFFALO, Wyo. — Douglas M. Krogh has signed a General Motors sales and service agreement to become the operator of Aspen Chevrolet here.

75th year for Stillman & Hoag Buick

Stillman & Hoag, Inc. (Buick), Englewood, N. J., which has been family-operated since its inception, celebrated its 75th anniversary. Here, Lloyd E. Reuss, right, Buick general manager, presents a plaque to Robert Stillman, left, dealership president, and Walter (Bud) Stillman, chairman of the board. Encased in the plaque is a letter from General Motors Chairman Roger B. Smith and President F. James McDonald.

Supply of domestic cars dips again; now 47 days

Continued from Page 2

percent; intermediate, 37.43 percent; standard, 16.48 percent, and luxury, 7.38 percent.

A month earlier, the inventory was divided as follows: Subcompact, 19.76 percent; compact, 19.90 percent; intermediate, 35.53 percent; standard, 17.25 percent, and luxury, 7.56 percent.

• The June 1 days-supply figures by market class were:

Subcompact — Accord, 24; Escort, 39; Spirit, 41; Turismo, 42; Alliance, 44; Lynx, 44; Horizon, 44; Charger, 45½; Omni, 51½; Pontiac 1000, 52; EXP, 54; Chevette, 57; Rabbit, 63; LN7, 69, and Eagle SX/4, 69½.

Compact — Topaz, 21; Pontiac 2000, 26; Skyhawk, 26; Tempo, 26; Cavalier, 28; Reliant, 30; Firenza, 42; Firebird, 43; Aries, 46; Zephyr, 49; Camaro, 53; Fairmont, 56; LeBaron, 62; Dodge 400, 65; Cimarron, 71; Mustang, 76, and Capri, 117.

DeLorean near sale of Logan

Continued from Page 1

that $100,000 posted in Bankruptcy Court in Detroit as a good-faith deposit by a group which wanted to reorganize DeLorean Motor Co. originated at Logan. That transaction aroused the suspicions of the creditors committee.

Canadian snowmobile maker Bombardier, Ltd., also was interested in acquiring Logan. Sources last week said the Steyr offer was better than the one made by Bombardier.

A management group at Logan also was interested in acquiring the company, but apparently was unable to match other offers.

Reynolds to sell computers to Australia dealers

DAYTON. — Reynolds & Reynolds Co. has formed a wholly owned subsidiary in Australia to sell its computer systems to Australia's 2,600 auto dealers.

R. H. Grant III, R&R group vice president - international, said the subsidiary, known as Reynolds & Reynolds (Australia), Ltd., will initially have sales offices in Melbourne and Sydney. Offices are planned for other principal cities.

The subsidiary will offer dealers information systems for their sales, service and parts departments and their business offices.

obituaries

Harold T. Ames

RANCHO MIRAGE, Calif.—Harold T. Ames, former president of Duesenberg, Inc., executive vice president of Auburn Automobile Co. and vice president of Cord Corp., died here June 2. He was 89. Mr. Ames started in the auto business in 1911 as a Hudson salesman in Chicago and was identified with auto manufacture from 1926 to 1937.

Nelson C. Dezendorf

MOLLUSK, Va. — Nelson C. Dezendorf, 85, a retired General Motors director and vice president, died May 31. He retired in 1963 as vice president and group executive in charge of the Dayton, Household Appliance and Electro-Motive Group. Mr. Dezendorf became a vice president in 1952 while serving as general manager of Electro-Motive Division. He was with GM 41 years.

John E. Masterson

DETROIT. — John E. Masterson, 58, purchasing vice president for Volkswagen of America, died June 1. He joined VW in 1976 after 26 years with Pontiac, where he rose to purchasing director.

Thomas M. Coggins Jr.

VENTNOR CITY, N. J.—Thomas M. Coggins Jr., retired owner of Coggins Chevrolet, Inc., Atlantic City, died May 28. He was 51. Prior to taking over the dealership, he was supervisor of cost and factory accounting for General Motors Assembly Division. He was a member of the National Chevrolet Dealers Advisory Council. His dealership was closed in 1980 after its land was leased for parking by Golden Nugget Hotel & Casino.

Makers build 609,206 cars in May

Month's output highest in 2 years

By Patricia Hoffman
Staff Writer

Domestic auto production last month was the highest for any month in two years.

The makers assembled 609,206 cars, up 22.03 percent from 499,242 in the year-ago month and the best for any month since 666,389 in May of 1981.

Breakdown for the month by company was: General Motors, 58.85 percent; Ford Motor, 22.87 percent; Chrysler Corp., 13.85 percent; American Motors, 2.60 percent; Volkswagen of America, 1.10 percent, and Honda, 0.73 percent.

Last week the manufacturers scheduled 148,903 cars, a 16.42 percent gain from 127,900 built during the previous shortened holiday week. Output was also up 30.30 percent from last year's 114,280 units.

So far this year, there have been 2,889,032 cars assembled, a 24.63 percent gain from 2,318,134 built in the comparable 1982 period.

Downtime was scheduled last week (June 6) at Ford's Dearborn plant. Operations there were idled due to heavy inventory in the field.

Saturday overtime was scheduled at six facilities last week. GM's Doraville, Flint and Lansing points and Ford's Chicago, Lorain and St. Louis plants operated six days.

All other plants resumed normal five-day operations last week following downtime the previous week due to the Memorial Day holiday.

Big rollback scam found as Missouri tightens law

ST. LOUIS. — As the Missouri House and Senate were approving legislation to crack down on odometer fraud, a large scam involving turned-back mileage indicators was uncovered.

Officials believe that more than 1,000 cars may have been involved in the St. Louis operation.

Police from four jurisdictions cooperated and arrested Peggy O'Connell as she was leaving her rented suburban Kirkwood home. Her husband, Thomas F., was sought on charges of felony theft with deceit.

According to police, the couple would purchase high-mileage cars from leasing companies and auctions and roll the odometer back about 50 percent. The cars then were reported registered in Indiana and a forged signature of an Indiana police officer was allegedly used to confirm the mileage.

Then the O'Connells, police said, got new titles with the lower mileage. Officials said that the cars were taken to Carmel, Ind., where O'Connell is believed to have a dealer's license.

There are reports that the couple may have netted $2 million by selling cars between $700 and $1,400 under the market price.

The O'Connells ran classified ads and told potential customers that there had been a death in the family and the estate was being settled.

Police said that about seven phones with different numbers were in the O'Connells' house. The house was raided after two women who met at a party compared notes and discovered that they had been given the same story by the couple.

If Gov. Christopher Bond signs the odometer bill, it will be easier to prosecute odometer cases because there would not be a need to prove conspiracy in the transfer of a car title with false mileage.

The bill was sponsored in the Senate by Truman E. Wilson, St. Joseph Democrat, who estimated that buyers of used cars were being defrauded of $130 million a year.

In the House it was sponsored by Rep. D. R. Osbourn, Monroe City Democrat.

May auto output in Canada is 105,854, best in 6 years

Canadian auto output during May reached its highest point for that period in six years, and the total soared 25.70 percent above the comparable 1982 figure.

Last month, the car makers assembled 105,854 units, up from 84,210 built during May, 1982. It was the most for that month since 1977 when 117,134 cars were produced, and the most for any month since June, 1978 when 117,848 were built.

The auto makers estimated 22,545 units last week, up 3.97 percent from 21,685 the previous week, and up 5.06 percent from last year's 21,459 units.

Year-to-date, there have been 469,423 cars assembled, a 10.92 percent gain from 423,208 built in the comparable 1982 period.

The truck manufacturers produced 51,359 units in May, up 2.45 percent from 50,133 built the same month last year but down from 64,837 in 1981. It was the most for any month since June, 1982, when 55,243 trucks were assembled.

Last week, the truck makers estimated 12,707 units, a 9.85 percent gain from the previous week's 11,568, but output fell 6.35 percent from last year's 13,568 units.

So far this year, there have been 241,214 trucks assembled, down 3.85 percent from 250,869 built in the comparable 1982 period.

Downtime continued last week (June 6) at International Harvester's Chatham and Vancouver facilities. Both points, idled May 23 for model changeover, are slated to resume July 25.

Ford Motor's St. Thomas facility remained closed last week for inventory control.

Both shifts at Chrysler Corp.'s Windsor truck point worked six days last week.

Chrysler's Windsor car facility wrapped up assembly of the Caravelle, Gran Fury, Diplomat and New Yorker Fifth Ave. models last week. Production of those models will be moved to the company's St. Louis point for the 1984 model run. Windsor will be retooled for assembly of the 1984 front-drive T-115 van/wagon models, scheduled to begin in October.

Truck production rises to 52,708; year near million

Domestic truck production in May rose 8.74 percent from last year's total, and output was the most for that period in four years.

Last month, the makers assembled 208,784 trucks, up from 192,008 built in May, 1982. It was the most for that month since 1979 when 338,961 units were assembled.

Output last week was scheduled at 52,708 units, a 22.03 percent gain from 43,191 built during four days of assembly the previous week, which included the Memorial Day holiday. The total was also up 27.79 percent from last year's 41,245 units.

Year-to-date, there have been 997,826 trucks assembled, up 9.49 percent from last year's 911,353.

Overtime was scheduled last week (June 6) at six assembly points. General Motors' Pontiac (No. 6) plant, and Ford Motor's Kansas City, Lorain, Norfolk, Michigan and Twin Cities facilities worked six days.

Inventory falls to 33 days for imported cars

By Richard A. Wright
Assistant Managing Editor

The imported new-car inventory dropped during May to the lowest point since AUTOMOTIVE NEWS began keeping track of the import stockpile.

The inventory of new imported cars June 1 totaled 275,411, a shortage-riddled 33-day supply, compared with 294,703 a month earlier, which was a 40-day supply. A year ago, the import inventory stood at 399,030 units, a 52/-day stockpile.

The inventory of new imported pickup trucks also fell during the month to 89,011 June 1, a 57-day supply, compared with 91,961 on May 1, a 78-day supply.

The combined imported-car-and-truck inventory June 1 totaled 364,422, a 37-day supply, compared with 386,664 May 1, a 45½-day stock.

The inventory slashing was done mostly by the Japanese nameplates, which just the month before had managed to build up stocks sufficiently to permit sales gains in May.

By June 1, Japanese makes were in very short 28-day supply, down from 35 days a month earlier. The Japanese inventory total June 1 was 185,500 cars.

• Particularly short on June 1 were Toyota, with a mere 14-day supply; Honda, with a 19½-day stock, and Mazda, with a 24-day supply.

Also short were Subaru, at 32 days, and Nissan, at 33 days. Isuzu had a 94-day stock of new cars and Mitsubishi a 106-day supply. In addition, Chrysler Corp. had a 91-day stock of Mitsubishi-built cars, including Sapporo, 81½; Challenger, 83;

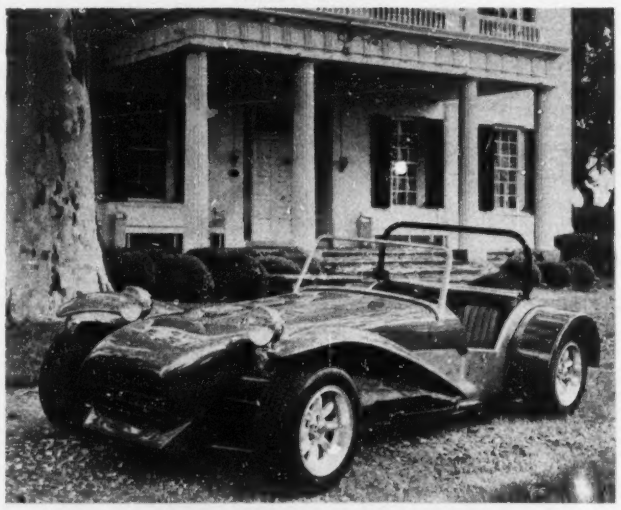
Fun stuff



East meets West in Rotus Seven

Rotus, Ltd., Frederick, Md., took the Lotus Seven design, improved the suspension system and added a Toyota Corolla drivetrain to create its Rotus Seven model. Completed vehicles with top will be priced just under $12,000. The engine compartment will accept virtually any four-cylinder domestic or import drivetrain, as well as General Motors V-6 or 4.1-liter V-8 engine.

Factories expected to hold price line on 1984 small cars

By Joseph Bohn
Marketing Editor

Domestic small cars, whose sales have been generally soft, appear to be in for little-to-no price increases this fall, based on preliminary data from one domestic firm.

Chrysler Corp. became the first domestic maker to issue pre-sell price protection information on its '84 small cars, designed to help fleet customers in their early ordering.

The company's mailgram to dealers indicated no change in the price of its '84 Omni/Horizon and Charger/Turismo subcompacts, "except for equipment adjustments."

Also, the '84 Aries/Reliant compacts "typically fleet equipped" are being price-protected for a 1.4 percent increase from the June 1 levels.

Options and destination charges for the subcompact and compact lines remain unchanged from June 1.

Chrysler indicated to dealers that pre-sell price protection information on other lines would be issued in July. General Motors may issue some price protection information for fleets this week. Ford Motor Co. normally issues the data in July.

GM traditionally sets pricing patterns for the industry. However, sales of its smaller cars, such as Chevette and Pontiac 1000, as well as the X-cars have also been soft, indicating that GM will exercise restraint in an effort to improve sales.

Analysts anticipate that the biggest increase will be on mid-size and standard-size models whose sales have shown the most strength.

• Chrysler's mailgram also indicated that it is continuing to provide special fleet subsidies, although these have been under fire by some dealer groups and NADA.

It's uncertain yet to what extent GM and Ford will respond with similar subsidies. In view of the controversy they've aroused — and the costs they entail — the companies are somewhat reluctant to get into this area, but may be forced to for competitive reasons.

Chrysler is giving fleet buyers an allowance of $300 on Omni/Horizon, Charger/Turismo and Reliant/Aries; $400 on LeBaron, E Class, Dodge 600 and 600 ES; $200 on Gran Fury and Diplomat; $200 on New Yorker and New Yorker Fifth Ave.; $200 on Dodge Colt and Vista; $400 on vans (excluding the new Dodge

After catching Japanese on output in 1985

U. S. to regain auto crown by 1986

By Kathleen Hamilton
Financial Editor

Political pressures will constrain the Japanese so much that by 1985, the U. S. will be neck and neck with Japan in auto production and will regain its crown as the world's leading auto producer by 1986.

The prediction is part of the latest Automotive News World Outlook, a quarterly service of Data Resources, Inc. (DRI), and AUTOMOTIVE NEWS.

Higher-than-expected interest rates and a milder-than-expected economic recovery have scaled back the 1983 U. S. car sales forecast by less than one percent.

The Automotive News World Outlook now calls for 1983 car

Table on Page 8.

sales of 8.96 million units—still a 12.3 percent improvement over 1982 and the highest total since 1980.

The 1983 forecast breaks down into 6.75 million domestics and 2.21 million imports. The last time the domestic industry sold that many cars was in 1979. U. S. truck sales will add another 2.87 million units for total vehicle sales of 11.83 million.

Even with any significant economic recovery delayed until 1984, the U. S. market will be booming compared with the rest of the world. The expansion will benefit home producers far more than Europe's and Japan's makers.

• With the Japanese restrained in the U. S., U. S. makers will see production soar: 28.8 percent this year, compared with 2.8 percent in Japan and 1.6 percent in Europe.

European makes, which have benefited from strong U. S. sales during the current recession, already have had their heyday, according to the forecast.

Upseale buyers traditionally lead the way out of a recession, and the European imports that attract them have already surged, said John Hammond, DRI director of automotive services.

The other car-producing nations are also expected to maintain pressure on Japan to curb its exports, Hammond said.

Coupled with a mature home market (average growth of only 1.3 percent over the 1982-88 period), the Japanese makers are expected to be kept at average annual production growth of only 2.6 percent through 1988.

That is only slightly better than Europe's annual production growth of 2.0 percent through 1988. The European car market, meanwhile, is expected to grow an average of only 1.8 percent per year.

• In sharp contrast, U. S. car production is expected to average 8.6 percent annual growth, while the market expands at an annual rate of 6.6 percent.

The averages are deceiving, however. The year of real

Continued on Page 8, Col. 1

Here are intro dates for 1984 U. S. models

Official public introductions of domestic new cars will return to a more normal pattern this year, though there are still exceptions.

All '84 Ford Motor cars and trucks, with the exception of the new Mark VII, will officially go on sale Sept. 22. The Mark VII will bow Nov. 3.

Similarly, all '84 General Motors products, except the new downsized C-body cars (Cadillac deVille, Buick Electra and Olds 98) officially go on sale Sept. 22.

GM has no official introduction date for the C-bodies yet, though they're not expected to bow until after Jan. 1.

Volkswagen selected Sept. 27 for its public introduction.

Chrysler is introducing all its '84 cars and trucks, except the T-115 Caravan and Voyager, on Sept. 29. The latter are slated for a Jan. 1 intro with the Rose Bowl as a major ad vehicle.

All American Motors vehicles, including downsized Cherokees, Wagoneers and the new Renault Encore, officially go on sale Sept. 29.

breaking news

Toyota plans to install robots at Fremont

TOKYO. — Toyota plans to throw out existing welding facilities at the former General Motors plant in Fremont, Calif., and install industrial robots and related equipment, according to reports published here. No action will be taken while GM and Toyota await FTC approval of the joint car-building venture. Toyota also plans to install a press line and revise chassis assembly and paint systems in line with Toyota production technology.

Japanese develop robot insurance

TOKYO.—The Union of Machinery Insurers of Japan has worked out a new kind of insurance, designed to cover risks stemming from problems with robots and resultant stoppage of assembly lines.

Toyota considers aiding Lotus

TOKYO.—A Toyota spokesman said his company is considering offering financial aid to Lotus Cars of England. It had been reported in some quarters that Toyota planned a takeover of the ailing firm. Toyota has been supplying twin-cam engines to Lotus in return for suspension equipment.

$400 million comes from cash kitty

Third of Chrysler loan repaid on earliest date

By Kathleen Hamilton
Financial Editor

As it had promised it would do, Chrysler Corp. last week paid off one-third of its government-guaranteed loans on the first day it was legal to do so.

The $400 million, plus $9.93 million in interest, was paid out of Chrysler's billion-dollar cash kitty.

The original plan had been to go to the private market to finance some of the payoff, partially as a public relations move to show that Chrysler was healthy enough to get credit without the government's help, and partially to get a better rate than the 15.9-percent interest being paid on this issue of government-backed loans.

But interest rates crept up, and Chrysler decided to use some of its cash reserve to pay off the private and institutional investors that had loaned it money when it was near bankruptcy in early 1981.

Chrysler's cash reserves are huge: $1.4 billion at last count (March 31). In comparison, Ford Motor Co., with more than three times Chrysler's sales, had $1.7 billion in its reserves at the end of the last quarter.

Chrysler accumulated the cash chiefly because it had to be self-financing, even down to Chrysler Financial operations, because of government loan guarantee restrictions and investment ratings that branded Chrysler paper as speculative, thus demanding high interest rates.

• Chrysler also has been building its cash reserves to pay back the restrictive government-backed loans. It still has guaranteed notes for $800 million outstanding, at 10.35 and 11.4 percent interest plus a one percent fee due the government.

The restrictions that go along with those notes may encourage Chrysler to pay them off, but the interest rates are pretty good by current standards.

The latest Moody's Investor Service Reports showed even top-rated corporate bonds are now paying 10.65 percent on new issues. Moody's still rates Chrysler as somewhat speculative, so it would likely be paying better than 12.5 percent on any new debt.

There are others looking at Chrysler's cash pile. UAW local presidents voted last week to seek a reopening of the labor contract. Delaware has asked for early repayment of the loan it made to Chrysler in 1980, and some Midwest states that loaned Chrysler money are at least thinking of following suit.

The vote by the presidents of the Chrysler union locals was advisory. The UAW Chrysler Council, comprised of more local leaders, will have to make the final decision on whether to seek a contract reopener. The council is scheduled to meet in July.

The union leaders who met last week mentioned figures of $1 and $1.50 per hour when discussing wage increases they would like to see.

Chrysler workers granted the company concessions that put them $2 an hour below the wages at Ford and General Motors, although Chrysler officials in the past have said Chrysler costs per worker actually rival those of GM and Ford.

The reason is that the workers who have survived layoff at Chrysler have higher seniority and, therefore, higher wages on average.

• There is some pressure within the union to try to get the Chrysler contract to expire in September, 1984, at the same time that workers' contracts at GM and Ford expire. Chrysler's current U. S. contract runs until mid-January. Talks would normally begin in October or November.

A Chrysler spokesman said company officials have not made a decision on an early opening of talks and that they are "keeping an open mind on it."

There also has been no decision on whether to repay the $5 million Delaware loan ahead of schedule. But Vice Chairman Gerald Greenwald recently noted the state was the first to step forward with assistance to Chrysler when it was in trouble.

Delaware has asked Chrysler to repay the 1980 loan to help avert a fiscal crisis in the state.

Chrysler is paying 15.5 percent interest on that loan and has already paid $2.3 million in interest and principal, according to the company.

Chrysler also has 15.5-percent loans outstanding from Michigan ($150 million) and Indiana ($32 million). Illinois holds a 15.75-percent note for $18.5 million.

Chrysler already has paid the four states almost $93 million in interest. It has paid $389 million in interest on the U. S.-backed loans.

Chrysler figured it saved $437.07 million by retiring the 1981 issue seven years ahead of schedule.

The $409.93 million check to retire that debt was paid to U. S. Trust Co. of New York, which issued checks last week to 1,000 investors in exchange for the Chrysler notes.

An Alliance with China

The first benefit of American Motors' new joint venture with Beijing Automotive Works in the People's Republic of China is the sale of three Renault Alliances to the Chinese Embassy in Washington. AMC Chairman Paul Tippett, left, presents the keys to an Alliance to Chinese Ambassador to the U. S. Zhang Wenjin at the Embassy.

Early-June car market reaches five-year high

By Jenny L. King
Staff Writer

Early June domestic new-car sales climbed 36,540 units to the best total for the period since 1978. Annualized sales based on the June 1-10 performance were 7.6 million.

Compared with the same period a year earlier, domestic sales were up 21.04 percent, adding to 210,188 against 173,648 in 1982. With nine selling days both years, the daily selling rate was also 21.04 percent higher, 23,354 vs. 19,294. Sales have been up in 12 of the 16 periods this calendar year. The 1978 period total was 283,274.

Sales by General Motors dealers were up 30.47 percent, to 131,729 from 100,967 in 1982. It was the best early-June total for the corporation since 1978. Chrysler Corp. reported its sales with the same statement. Chrysler was up 22.19 percent, to 25,197 from 20,622.

Ford Motor Co. was the only major U. S. auto maker to miss its year-ago sales level. Ford was down 4.03 percent, to 45,951 from 47,881. American Motors reported estimated sales of 3,600 new cars, up 50.00 percent from 2,400. Volkswagen of America was up 17.72 percent, to 2,093 from 1,778, and Honda Accord sales reached 1,618 for the period.

• GM claimed 62.67 percent of the market, up from 58.14 percent last year. Ford climbed to 21.86 percent from 27.57 percent. Chrysler was up to 11.99 percent from 11.88 percent. AMC earned 1.71 percent, up from 1.38 percent. VWoA had 1.00 percent, down from 1.03 percent and Honda cornered 0.77 percent compared with no domestic share a year ago.

Chevrolet, the top-selling domestic make, enjoyed a 49.15-percent sales increase in early June, rising to 44,559 from 29,876 last year. Oldsmobile took second place and had a 66.34-percent increase, to 33,235 from 19,980. Buick was third at 32,720, followed by Ford's 29,277. Buick was up just 0.46 percent while Ford dropped 13.33 percent.

Other makes with sales increases included Chrysler, up 27.70 percent; Dodge, up 51.91 percent; Mercury, up 30.35 percent; Cadillac, up 56.79 percent, and VW, up 17.72 percent.

Plymouth was down 6.93 percent, Imperial was down 69.01 percent, Lincoln was down 19.56 percent, Pontiac was down 7.05 percent and AMC, not including Alliance, was off an estimated 55.00 percent.

Year-to-date sales reached 2,877,065, up 8.28 percent from 2,657,042 a year ago.

DeLorean co-defendant changes plea to guilty

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — William M. Hetrick, a co-defendant with John Z. DeLorean in a drug trafficking case here, changed his innocent plea to guilty last week as a result of a plea bargaining agreement reached with the government Feb. 24.

The change of plea means that Hetrick could testify against DeLorean.

Hetrick, owner of Morgan Aviation in Mojave, Calif., pleaded guilty to four of the six counts he was charged with in the 11-count indictment against himself, DeLorean and Stephen Arrington.

Those four counts include charges of conspiracy to possess and distribute cocaine, possession of cocaine with intent to distribute, interstate travel in furtherance of a narcotics transaction and unlawful use of a telephone to further a narcotics transaction.

Two counts, one charging Hetrick with distributing 25 kilos of cocaine, and the other, of conducting a continuing criminal enterprise, were dropped by the government.

Hetrick also pleaded guilty to

But warranty questions could be raised

New York lemon law wins approval

By John A. Russell
New York Staff Writer

ALBANY, N. Y. — A lemon law passed by the State Legislature last week could raise warranty questions since it effectively extends the time in which a consumer can obtain reimbursement for or replacement of his automobile to 18,000 miles or two years.

While the new legislation, waiting to be signed by the governor, does not address the question of warranties, it does stipulate that after four attempts within this period to repair the same defect, or after the car has been in the shop for 30 days for a major defect, the consumer can move to obtain either reimbursement or replacement of the vehicle.

Most domestic manufacturers' warranties are 12 months or 12,000 miles.

A spokesman for the state attorney general's office, which "backed the legislation 100 percent," said the time provision was not a warranty, but only setting up time frames for consumer action.

However, a spokesman for the New York State Automobile Dealers Assn., noted that the time frame does have the same effect as an extended warranty.

The association opposed the legislation on the grounds that it does not provide anything new for the consumer.

• Under this legislation, passed by overwhelming majorities (146 to 2 in the Assembly and 55 to 1 in the Senate), a consumer would be required to go through an arbitration proceeding before he or she could obtain either reimbursement or replacement.

Also, if the consumer is not satisfied with the results of the arbitration, he or she can go into litigation with the manufacturer.

If the consumer wins the case, the legislation provides that the manufacturer would be required to pay legal expenses.

One point that bothers the state dealer association is that "the consumer will not understand the law." State newspapers have played up the fact that the consumer can obtain another automobile or reimbursement, but there has been little if any mention of the fact that an arbitration proceeding is mandatory.

Peter Peterson, regional public relations manager for General Motors in Buffalo, called the measure unnecessary since "there is legislation which protects the consumer" as well as existing arbitration procedures.

While there are no enforcement procedures against dealers, and David Long, executive director of the Greater New York Automobile Dealers Assn., said his organization does not have great problems with the measure, he also questioned whether the concept of effectively extending a warranty would "hold up." His association did not oppose the measure, but Long added that this effect on the warranties was a legal issue.

The measure stipulates that the consumer must let the dealer or manufacturer attempt to repair the problem then go through the arbitration proceeding established by the manufacturer (the Big Three have these systems in place). After that, the consumer can go to court.

Lemon bill in Massachusetts has backing of governor

BOSTON. — A lemon bill designed to offer redress for buyers of unsatisfactory new vehicles, is slowly making its way through the Legislature toward the desk of Gov. Michael S. Durakis, where it almost certainly would be signed.

His administration has backed the development of such a law and has been represented at a number of State House hearings by Paula Gold, secretary for consumer affairs.

Testimony has been heard from Connecticut Rep. John Woodcock, who was instrumental in getting such a law passed in that state.

The legislation has been backed by Don Lorenz, a General Motors dealer in Greenfield and president of the 500-member Massachusetts State Automobile Dealers Assn.

"We want to go on the record," Lorenz said. "We are in favor of a lemon law."

However, spokesmen for Ford Motor Co. and Chrysler Corp. opposed the measure.

The proposal would apply to any new car, truck or motorcycle for the first full year or 15,000 miles.

Manufacturers and their dealers would have three opportunities to repair, without penalty, any single defect and 15 days to repair any combination of defects.

If they failed to meet those limits, they would have one more chance to fix the vehicle, and the job would have to be completed satisfactorily within seven business days.

If the problems continued, the consumer would be entitled to a refund or a replacement vehicle.

Before going to court to gain his rights, a vehicle owner would have to submit his case to arbitration before a board yet to be named. Half of the board members would represent the industry, and the other half would be named by the secretary for consumer affairs.

The board would have 40 days to make its decision, which would be binding on the manufacturer but not on the consumer.

"Lemon" vehicles could not be resold in the state without disclosure that they had been returned by the previous buyer.

GSA seeks bids on 5,000 cars with air bags

WASHINGTON. — The solicitation to bid on a government contract for 5,000 '85 compact cars with driver-only air bags has been published by the General Services Administration. Ford is the only company known at this time to be actively interested in bidding.

The statutory price limit for the base standard passenger vehicle, excluding special options like the air cushion restraint system, is $6,000 for sedans and $6,400 for station wagons.

In the solicitation, the GSA reserves the right to increase the quantity of driver-only air-bagged cars by 100 percent at the same price, but GSA would have to exercise that option within a year.

It also requires shipment of the first five vehicles in October, 1984, with five more the next month. Shipment of the remainder would start in December and be completed no later than the end of March, 1985.

• These cars must have a minimum combined (city and highway EPA cycles) fuel-economy rating of 28 MPG and a minimum 140-CID engine. Also mandated is a red high-mounted stop lamp at the rear, mounted either outside or inside. Ford is given the option of using an anti-lacerative windshield at its own cost if it wants to for a test fleet.

As an additional cost item, GSA expressed interest in a minimum two-year extended warranty and service plan with the option of a yearly renewal

Sporty hatch

The new C & C Sport Hatch is available from Cars & Concepts, Brighton, Mich., for 1982 and 1983 Camaros and Firebirds. The one-piece fiberglass component includes a tinted rear glass window and comes completely assembled.

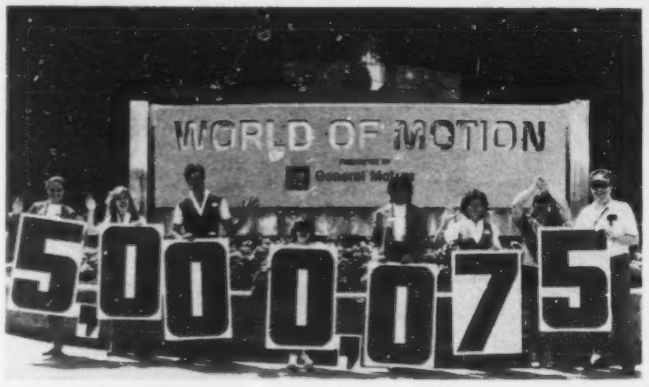
Florida 'lemons' must be replaced under new law

TALLAHASSEE.—Gov. Robert Graham signed legislation that will let Florida car buyers get replacements from manufacturers for "lemons."

The law, which goes into effect Oct. 1, "gives consumers greater assurances against being stuck with a lemon," Graham said.

The lemon law would apply only to cars that are under warranty or during the first year of ownership, whichever is less. If a dealer cannot fix a problem after three attempts, the manufacturer would be required to replace the car or refund the purchase price less an allowance for how much the car has been used.

However, minor problems, such as a broken radio, would not be covered. Only malfunctions that "impair the use, safety or market value" of the car would apply.



Number 5 million plus 75

Julie Woodworth, second from right, was the 5,000,075th visitor to the General Motors World of Motion Epcot Center pavilion near Orlando, Fla. GM chose to honor the 5,000,075th visitor because 1983 is the 75th anniversary of the founding of GM. Mrs. Woodworth and her husband, Dean, far right, and their daughter Erin, center, join pavilion staff members in commemorating the attendance milestone.

Help on way for Ford, GM in meeting future CAFE

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Some help for General Motors and Ford Motor Co. in meeting future CAFE (Corporate Average Fuel Economy) standards is on the way.

And even though it may be retroactive to 1980 models, it will not be nearly enough to save GM and Ford from millions of dollars in penalties under the 1975 law. The problem stems from the strong sales of larger cars and the slower sales of smaller cars with higher MPG ratings.

GM and Ford may, indeed, need a change in the law, and Chrysler Corp., American Motors and Volkswagen of America are not expected to be sympathetic.

Neither may a number of congressmen who recognize that even though the country now is awash in cheaper gasoline, the signs are all wrong since petroleum is even more limited than it was 10 years ago despite the fact that the spigot has been running freely.

What EPA can do — and must do, according to a Sixth Circuit Court decision — is give all companies an adjustment factor because of a change in the test procedure used by EPA to measure both emissions and fuel economy.

The change which EPA is considering has nothing to do with the recently announced move to make EPA labels agree more closely with "real-life" driving. That one may help car buyers, but it has nothing to do with the way mileage is calculated by 1975 statute for CAFEs or by separate 1978 statute for the gas-guzzler tax.

• But both CAFEs and the gas-guzzler tax will be affected when EPA decides on an adjustment factor because of changes in test procedures.

Ironically, some of the needed adjustment occurred because Ford asked EPA to cut weight categories as it started its downsizing program in the hope that it would help Ford meet CAFE standards.

EPA complied (during the Ford Administration and Eric Stork, then at EPA, described it as an example of being careful what you wish because it may really happen), but Ford then discovered the change made it more difficult to meet CAFEs. But other changes such as humidity in the laboratory and dynamometer horsepower control did help.

Later, both Ford and GM, in speaking to the Carter Administration about the need to unshackle the industry during its trauma of finding capital to downsize vehicles, evaluated the adjustment factor as worth 0.6 MPG. This was at the time when the common figure for downsizing cost was one-tenth of an MPG equals $100 million.

In 1980, Ford and GM took EPA to U. S. Appeals Court in Cincinnati. The three-judge decision which came down in January, 1982, noted that Congress required use of the 1975 yardstick procedures and since EPA had made changes, an adjustment was needed. The court remanded the case to EPA to initiate proper rulemaking for such a factor.

• EPA now has this underway, and GM has indicated the value should be about 0.3 MPG; Ford, about 0.2 MPG. It is rumored that EPA may come in somewhat lower than 0.2 MPG, but this may be retroactive.

Assuming that EPA says 0.2 MPG, that can no longer be equated to $200 million in capital costs, but it is very important in mitigating future penalties.

Under current law, every miss of a tenth of an MPG carries a fine of $5 per unit produced. If GM is up to its old volume of 5 million by the '85 model year, that would be $25

1st Nissan pickup built at Smyrna

SMYRNA, Tenn. — The first Nissan compact pickup truck to be built in the U. S. came off the assembly line here last week with Marvin T. Runyon, president, Nissan Motor Mfg. Corp. U.S.A., at the wheel.

Job 1 was a white, long-bed truck with a blue interior. After official dedication of the $660 million manufacturing and assembly facility next October, Runyon said, the truck will be placed on permanent loan to Tennessee State Museum in Nashville.

19 different models now in production

Japanese gear up to seize global 4WD market

By John Hartley
Staff Correspondent

TOKYO. — Japan's auto industry is poised to take over the worldwide four-wheel-drive market.

Last year, over 700,000 4WD vehicles were produced in Japan, and 500,000 were exported. This year, production will exceed 800,000 units.

Significantly, 350,000 of the 4WD vehicles produced last year were vans or passenger cars, a market that hardly existed three years ago. Future growth will come from extra 4WD versions of existing models, such as cab-over vans and passenger cars, as well as from smaller off-road vehicles such as the Mitsubishi Pajero (Montero).

The new models will be aimed principally at the leisure or RV market, which is expected to grow rapidly.

Japanese manufacturers expect the traditional 4WD market to expand at a rate of about 15 percent a year for some time, while 4WD will become an option in many passenger cars.

Said Tadasu Wake, general manager, passenger car product planning, Mitsubishi Motors: "We expect strong growth in the passenger-car 4WD business. If possible, all passenger cars should be 4WD, but the problems are cost, weight and fuel consumption."

Those comments are echoed by Kyoji Kanekiyo, manager, marketing and product planning at Nissan, who said: "Four-wheel drive will be added to passenger cars as an option like power steering, giving the widest choice to the customer."

• Strangely, although sales of 4WD vehicles are generally increasing in the U. S., they have slumped from 980,000 units a year to 440,000 in the past four years. The U. S. is still the best market for 4WD vehicles for Japanese companies, though. Toyota sold 55,000 Hi-Lux 4WDs last year in the U. S., and Nissan sold around 35,000 4WD Datsun trucks — that's about 97 percent of all Datsun trucks exported. Then, Fuji Heavy Industries exports almost all its Brats to the U. S.

In the future, the Japanese expect the U. S. market for 4WDs to recover, partly from the fall in the price of gasoline, and partly from the introduction of smaller 4WD vehicles.

Amazingly, 19 different 4WD models are produced in Japan, and they range from the midget vans through passenger cars and a 2-tonne GVW van to large utility vehicles, such as the Toyota Land Cruiser, which is the leader at 129,000 units produced a year. No. 2 seller is the Subaru sedan range, at over 100,000 a year.

Third and fourth in production are the Suzuki Jimny, and Toyota Hi-Lux, but this year, the Toyota Tercel 4WDs may overtake the Hi-Lux's 88,542 total. This shows how quickly the 4WD passenger-car market is growing — the Tercel 4WD was introduced only last fall, and the signs are that it is increasing 4WD sales, rather than competing with existing vehicles.

With the exception of the midgets, the vast majority of Japanese 4WDs are exported. Three years ago, Subaru introduced a 4WD version of its tiny Sambar midget van, and soon afterwards Suzuki followed suit.

Now Daihatsu, Honda and Mitsubishi also produce 4WD versions of their midget trucks — which are limited to a 550cc engine and vehicle length and width of 126 inches and 55 inches respectively.

Since Northern Japan is

Ford Motor marks 80th anniversary

DEARBORN. — Ford Motor Co. observed its 80th anniversary June 16.

At the time of its incorporation in 1903, Ford was staffed with 10 people. Today, the company is one of the world's largest industrial enterprises with active manufacturing, assembly and sales operations in 29 countries, on six continents. There are 135 company locations around the world.

More than 375,000 men and women now come to work each day in Ford factories, laboratories and offices. Ford products are sold in nearly 150 nations and territories by a global network of some 10,500 dealers. The company's annual sales exceed the gross national products of many industrialized nations.

Japanese favorite

Toyota Land Cruiser is the dominant 4WD vehicle produced in Japan, with production last year reaching 129,000. Outside of Japan, its main markets are Saudi Arabia and Australia.

Looking to the future

From now on, growth in the 4WD market is expected to be most vigorous among the smaller off-road vehicles, such as this Mitsubishi Pajero (called Montero in the U. S.).

Tops among the smaller 4WDs

Suzuki's tiny Jimny trails Toyota Land Cruiser and Subaru sedan range in the domestic 4WD field, but is tops among the smaller models and is third over-all in production.

Isuzu Trooper based on truck

One of the group of new light-duty 4WDs produced in Japan is the Isuzu Trooper, which is based on the chassis of the KB truck.

After catching Japanese on output in 1985

U. S. to regain auto crown by 1986

Continued from Page 1

growth in all three markets will be 1984, with significantly smaller increases — and even a few decreases in production and sales — thereafter.

By 1985, U. S. makers are expected to be building 7.8 million cars; the Japanese 7.8 million. The following year, U. S. will be building 8.2 million; Japan, 8.0 million. (Japan has been the world leader in production since 1980.)

Of course, the definition of a "U. S. maker" will be somewhat hazy by 1985: Honda is already selling cars made in the U. S.; Toyota-GM cars are slated for U. S. production beginning in late 1984, and other Japanese firms may be assembling in the U. S. by mid-decade, as well.

This year's projected U. S. production — 7.17 million cars — will be the highest since the 8.42 million built in 1979.

Struggle though the domestics may — and even with boosts from U. S.-assembled Toyotas, Hondas and Renaults — the domestic makers are not expected to see another year to equal 1979 production through the forecast period.

By 1987, U. S. car registrations — domestics plus imports — are expected to be 11.49 million, topping the 1973 sales record of 11.30 million.

Even 1984 should be a good year for the U. S. auto industry. The Automotive News World Outlook calls for 7.90 million domestic sales and 2.33 million imports for a total of 10.23 million car sales. There hasn't been a 10-million car year since 1979.

Trucks are expected to add another 3.39 million units, for total vehicles sales of 13.62 million.

Growth in the medium and heavy-truck range is forecast at more than 26 percent in 1984; light-truck sales are expected to increase 17.5 percent during the year.

Steady gasoline prices will keep the full-size and intermediate-size cars selling at their current brisk pace. These lines are expected to see increases of 19 percent this year and 16 percent next year, compared with the industry average of 12 and 14 percent, respectively.

Compacts and subcompacts will continue to be less in demand, with sales increases of 5 and 12 percent for the two years.

Makers expected to hold price line on '84 small cars

Continued from Page 1

Mini Ram Van) and B-Series wagons; $300 on light-duty pickups, D and W 100/150 Series (including sport utility); $500 on D and W 250/350 Series; $400 on Rampage, and $200 on D-50 import pickups.

In lieu of cash, fleet buyers can choose options such as AM/FM stereo, speed control, deluxe wipers, power door locks and rear defroster on most domestic cars. (The alternative options are not available on imports or trucks.)

The company is also offering a guaranteed depreciation plan for all front-wheel-drive cars, except imports, based on Automotive Market Report figures. For 12-15 months in service, for example, vehicles are protected with a 1.75 percent monthly depreciation and for 18 to 36 months for a 1.50 percent a month depreciation.

There's also a fast-start allowance payment of $200 on Omni/Horizon and Charger/Turismo fleet orders placed by Sept. 30, 1983.

Carder picked to head dealers in Arkansas

LITTLE ROCK.—Frank Carder, Carder Buick - Oldsmobile-Mazda, Searcy, has been elected president of the Arkansas Automobile Dealers Assn.

Bob Russell, Russell Chevrolet, North Little Rock, was elected first vice president and Hervey Aycock, Aycock Pontiac, Jonesboro, treasurer.

Mainella's 25th year

PHILLIPPI, W. Va. — Louis Mainella, Louis Chevrolet, was honored for his 25 years as a Chevrolet dealer.

truck industry news

Total—273,409—is second-highest in 15 months

May truck sales rise 11.3 percent

Retail sales of trucks of all types in the U. S. in May were the second-highest of the year, and the total also was the second best in 15 months. The total for March, 1983, was the only one to top last month's count.

In May, according to preliminary reports, the nation's franchised dealers and factory outlets retailed 273,409 new trucks, an increase of 11.3 percent over last year's 245,741 units, the fourth-highest total in the 15-month period.

The five-month total for 1983 was up 6.3 percent to an estimated 1,192,018 units, compared with 1,121,073 a year ago.

Brisk sales of light trucks, especially the compact vehicles and vans, continued to lead the way. In May, they were 13.4 percent higher than a year ago, and the five-month count was up 7.9 percent.

During the month, 259,413 new light trucks were retailed in the U. S., compared with 228,813 in May, 1982. Through May, the total was 1,120,027, as against 1,037,841 units in the first five months of 1982.

Sales of heavies were down for May and the January-May period, while the mediums were off during the month, but slightly higher for the first five months.

• During the month, 9,852 heavy trucks were sold, down 20.3 percent from last year's 12,355. Through May, the total was 53,585 units, a decline of 17.4 percent from the year-earlier 65,057.

Sales of mediums in May were off 9.4 percent, from 4,573 units a year ago to 4,144. For the five-month period, however, the total was 18,406 units, 31 more than the 18,375 vehicles retailed in the like period in 1982.

Compact-truck sales were up dramatically for both May and the five-month period.

During the month, dealers retailed 93,501 of the small trucks, an increase of 32.6 percent over last year's 70,519. Through May, the total was 29.3 percent higher, from 315,406 units a year ago to 408,263.

May sales of the domestic compacts totaled 54,384 units, up 35.1 percent over last year's 40,253. Through May, the count was 52.7 percent higher, from 156,200 units a year ago to 238,564.

During the month, dealers sold 39,117 imported pickups—both captive and non-captive—an increase of 29.2 percent over the year-earlier 30,266. The five-

Renault to take over operations at Mack

ALLENTOWN, Pa. — Renault will take over operating control of Mack Trucks, Inc., under an agreement reached with Signal Cos., Mack's parent. Renault is increasing its Mack ownership from 20 percent to 45 percent.

At the same time, Mack has filed with the Securities & Exchange Commission for an initial public offering of 10 million common shares. Signal said it will sell 6.7 million shares, while Mack will offer 3.3 million new shares.

The stock offering, plus the $100 million which Renault will pay for the increased Mack holdings, will reduce Signal's ownership of the ailing truck manufacturer from 80 percent to 27 percent.

Under the agreement with the French vehicle producer—subject to completion of definitive agreements, governmental approvals and other conditions — the $100 million purchase price will be added to Mack's capital over a three-year period, rather than go directly to Signal.

Renault also will receive a warrant to purchase an additional 15 percent of Mack.

• Proceeds from the Mack stock offering will be used for additional working capital and capital expenditures, a Signal spokesman said.

Mack, whose sales have slumped sharply as a result of the recession, had a loss of $108 million in the first quarter of 1983. For all of 1982, it had a loss of $23.3 million on sales of $1.29 billion.

Signal announced at its annual meeting last April that it would dispose of its interest in Mack as part of a plan to restructure Signal "into a high-technology and engineering company."

Renault acquired its 20 percent interest in Mack starting in 1979, as part of a program for Mack to market Renault-built Mack Mid-Liner medium trucks in North America. The French firm paid $115 million for the Mack holdings.

Nissan offering 8.8 pct. financing on small trucks

CARSON, Calif. — Nissan U.S.A. has announced that it will offer 8.8 percent financing on its pickup trucks. The program started June 14 and continues through July 31.

Under the offer, the buyer of a new Nissan/Datsun truck who makes his purchase on credit pays only 8.8 percent annual interest through participating lending institutions.

Nissan U.S.A. pays the difference between that rate and the lender's normal rate, up to a maximum of 14.75 percent.

Nissan has had a 9.9 percent interest rate program on trucks for several months, a move which it said has produced a 33 percent increase in sales.

"We want to maintain that momentum," said C. P. (Chuck) King, Nissan's senior vice president/sales.

"The new rate reflects the downward trend in financing rates and makes us competitive with other companies."

Mazda adds sporty pickup

Mazda has added a sporty new trim level—the SE-5—to its B2000 compact-pickup truck line. Standard equipment includes bold exterior stripes, rear step bumper, sports mirrors on both doors and white, spoked wheels. The SE-5's suggested retail price is $5,995.

GNB introduces new battery line for light trucks

ST. PAUL, Minn.—A new line of batteries, called Power Breed and designed especially for light trucks and vans, has been introduced by GNB Batteries, Inc.

The new maintenance-free batteries provide up to 100 more cold-cranking amps of peak starting power than other batteries in their class, a GNB spokesman said.

"Many of the 30.5 million light trucks and vans on the road are high-use vehicles that need this kind of extra power for day-in, day-out performance," he added.

"The new units also provide up to 25 percent more reserve capacity, which is important to many light-truck and van owners who use electrical accessories like CBs, radios and tape decks when the engine is not running," he said.

The new line will fit 95 percent of the light trucks and vans on the road today, he said, as well as most domestic and foreign-made cars.

"The extra power from the new batteries is especially important for vehicles with four-and-six-cylinder engines which actually need more starting power than larger engines," he continued.

Other features of the new

Designed to reduce fuel use

The objective of the Ford Concept Cargo truck is to reduce fuel consumption by 20 percent, so the body is a "sandwich" of aluminum honeycomb and balsa wood.

20 pct. fuel cut is goal of Ford truck for '90s

By Richard Feast
European Editor

LONDON. — Ford of Europe truck engineers are working on a vehicle for the 1990s. The results are incorporated in a truck called Concept Cargo, said to have a 20 percent reduction in fuel consumption.

Concept Cargo is based on Ford's regular production Cargo model, Europe's Truck of the Year in 1982. Among the experimental model's features are front and rear disc brakes, radial ply tires for improved handling and road holding, and lightweight composite springs and prop shaft.

Peter Nevitt, Ford director of truck engineering, noting the vehicle embodies the most up to date truck technology, says, "It is a fully engineered working truck — a mobile test bed for advance ideas — and should not be regarded merely as a static dream for the future."

• Concept Cargo has a 6.2-liter six-cylinder turbo diesel engine designed to produce greater power and torque at lower speeds than current engines. Outputs are matched to optimum gear and axle ratios.

Transmission and springing composites save 207 pounds in weight. Disc brakes — besides giving better all-around performance and lower servicing costs — save another 44 pounds.

Emphasis is placed on aerodynamics. There are an integral front bumper and air dam, a cab roof spoiler and a collar that fills the gap between cab and box body. Wheel arches are enclosed for smoother air flow by polypropylene brush skirts. Insides of the wheel arches are lined with a bristle-type material that minimizes spray in wet weather.

Lattice structures between front and rear wheels are used to withstand side impact loads of up to one ton.

Bodywork is constructed of aluminum honeycomb and balsa wood "sandwich" materials. Some cab glass is replaced by lighter-weight polycarbonate plastic. The regular truck's steel floor is replaced by a steel/plastic/steel sandwich that saves weight and absorbs engine noise.

Disc brakes reduce weight

Disc brakes, on all four wheels of Ford of Europe's Concept Cargo truck for the 1990s, have semi-metallic asbestos-free pads and produce a weight saving of 44 pounds. Disc brakes give better all-around performance and lower service costs.

Fiat

Continued from Page 35

the old 127 hatchback, the Uno's predecessor. It is 1.3-liter and 45-HP, the same as the 45S gasoline version of the Uno.

While the diesel has the same top speed as the 45S (87-MPH), its fuel consumption is 5 to 10 percent less. In a country like Italy, where diesel fuel costs half the price of gas, its appeal is evident.

According to Fiat, last year's annual diesel car demand in Europe is exceeding one million, or around one in 10 sales. But in Italy, where Fiat recently moved to around 55 percent of market penetration, the diesel proportion is one in five. In Italy last year diesel passenger car sales were 327,000.

Paulo Scolari, Fiat Auto's chief engineer, says "This engine is very important to us, especially on the Italian market. It is not quite so important in the rest of Europe, but we see a lot of growth in that area."

Diesel versions of the Uno will amount to around 15 percent of output. At present the model has little opposition. Apart from the three-cylinder Daihatsu, a company with a limited presence in Europe, there is nothing.

There are plenty of diesels in the lower-medium category (Golf, Kadett, R9, Ritmo) but in the supermini segment the Uno diesel is on its own for the present.

Ford's new diesel is expected to power the Fiesta (as well as Escort) and a diesel version of Peugeot's new 205 is anticipated soon. Over the medium term, General Motors, Volkswagen and Renault cannot be expected to allow Fiat to carve out this niche for itself.

The diesel Uno was launched in Italy, enters France later this year and other countries in February.

For GM and Ford

Help on way to meet future CAFE

Continued from Page 4

million. If Ford is up to its '79 volume of 2.5 million units, that would be a fine of $12.5 million.

Various congressional committees and interested lawmakers are exploring the extent of the problem if consumers continue buying larger cars.

While this may equate to the full-line makers in the short term as "maxi cars, maxi profits," it can spell long-term disaster in the form of hundreds of millions of dollars in fines.

Without prejudging congressional reaction — where some lawmakers are fearful that without CAFEs the auto industry may make itself more uncompetitive with the Japanese should another fuel shortage appear — there are other groups certain to oppose any change in the law.

The Center for Auto Safety, for example, has already taken NHTSA to court over its action in dropping its advance notice for CAFEs beyond 1985. The Energy Conservation Coalition is ready to spring into action to oppose any move by Ford and GM to get relief.

Besides, Chrysler — which has gone deeply into debt to achieve its energy-efficient fleet — and American Motors — which for other reasons had to affiliate with Renault — are not likely to want increased competition from their American siblings. Neither is VWoA.

Some observers feel that GM's position is worse than Ford's because of the leaner mix of small cars in GM's product plans during the next few years.

Standards of the Energy Preservation and Conservation Act are 26 MPG for '83 models, 27 MPG for '84 models and 27.5 MPG for '85 models. (Under the 1975 law, the 27.5 MPG was a goal, but NHTSA made it a standard which can be rolled back, but only under lengthy procedures.)

GM reported last December that it expected its '83 models to have a CAFE of 24.1 MPG, but this may have declined because of sales of its bigger cars.

This will be taken care of by GM's carryforward credits of 428 million from 1980 models (plus credits of $240 million from '81 models and $51 million from '82 models) even if GM's CAFE has slipped to 23.6 MPG for '83 models. But GM could very well be in serious trouble by '84 models because it's a big jump for a company to improve by almost two MPG in one model year.

If, for example, GM can reach only 25.5 MPG for its '84 models — 1.5 MPG below the EPCA standard — and produces only 4 million units, then at $75 per car fine, it would owe the government $300 million and may have only at most $290 million in credits to carry forward from the three preceding years.

Then GM would be in the position of having to stretch to get another 2 MPG to meet the '85 standard of 27.5 MPG.

• Ford's situation is somewhat better, especially if the new Tempo and Topaz continue selling well. Ford had $149 million in carryforward credits from the 1980 model year, $89 million from the '81 model year and $35 million from the '82 model year.

The estimate Ford gave to NHTSA last December for its '83 models was 24.3 MPG and that also may have deteriorated because of increased sales of big cars.

Assuming Ford's penalty for '83 models is $163 million, then Ford would have $110 million left to carry forward for a possible penalty for '84 models. Assuming Ford production at 2 million cars for 1984 and a shortfall of one MPG below the CAFE, it would have to draw down $100 million—leaving it only $10 million in the bank for '85 models.

For '85 models, if Ford were half an MPG below standard, then Ford would be short $50 million for the year or a net penalty of $40 million.

But when the law was amended to change the captive import clause and to increase the carryforward section from one year to three years, it was also changed to include a three-year carryback provision.

This means that Ford or GM could present a plan to NHTSA saying they should not pay fines in the '84 or '85 model years since they expect to be selling lots of small cars in 1986-87.

If the government accepted this scenario as reasonable — and the only way it would seem this could be assured would be to have a guaranteed oil shortage with long lines at gas stations — then relief could be granted.

This would be chancy unless the companies had only very small fuel-efficient vehicles and engines to sell since some may argue that as long as big cars are being made and gasoline is freely available, consumers will want to buy big cars, and in the past market predictions have not been noted for accuracy.

• Of course, NHTSA could act to change its standards, but that is time-consuming since NHTSA must not only observe legal procedures for standards it has set, but it could not change the ones Congress set.

Moreover, under the 1975 law, NHTSA could not adjust below 26 MPG or above 27.5 MPG without subjecting those actions to a one-house veto by Congress.

GM and Ford, with their bigger cars, might also bump into the gas-guzzler taxes — now being paid only by Rolls-Royce (with 412-CID engines), two Ferraris (with 179-CID engines) a Maserati (301-CID), the Jaguar XJS (326-CID) and the Ford Crown Victoria (with 351-CID) — but the Ford is excluded because it is only for a limousine or for police use. Besides, the Ford is listed only as a 49-state car — that is, not with California emission controls.

The gas-guzzler taxes are extremely high and either the consumer pays it or the manufacturer absorbs it. Those taxes range from $500 to $2,650 in 1985 and from $500 to $3,850 for '86 models. They were — and are — clearly meant as a deterrent.

For 1985 models, cars must get at least 21 MPG to escape the tax. Here are the gas-guzzler taxes:

1985

At least 21.0 MPG	0
20.0 - 21.0	$ 500
19.0 - 20.0	600
18.0 - 19.0	800
17.0 - 18.0	1,000
16.0 - 17.0	1,200
15.0 - 16.0	1,500
14.0 - 15.0	1,800
13.0 - 14.0	2,200
less than 13.0	2,650

1986

At least 22.5 MPG	0
21.5 - 22.5	$ 500
20.5 - 21.5	650
19.5 - 20.5	850
18.5 - 19.5	1,050
17.5 - 18.5	1,300
16.5 - 17.5	1,500
15.5 - 16.5	1,850
14.5 - 15.5	2,250
13.5 - 14.5	2,700
12.5 - 13.5	3,200
less than 12.5	3,850

Will Congress be asked to repeal this law? Rolls-Royce and the other luxury car makers would be delighted. But if the U. S. makers convince Congress their future lies with big cars, will the Japanese be far behind?

There's only one Joe Muers in Detroit *with* 30 different kinds of sea food

Spring and summer it's Soft Shell Crab and Fresh Lake Sturgeon, in the fall and winter it's Black Sea Bass and in early spring Shad Roe . . . and always several dozen other fresh and salt water selections from which to choose.

For starters - a rich Lobster Bisque, Mussels Marinere, an Oyster Stew or Baby Scallops baked in wine and butter to be followed by a fresh Michigan Rainbow Trout, live Maine Lobster, tender Baby Frog Legs provencal, gently Poached Haddock with mustard sauce, Steamed Jumbo Finnan Haddie, Smoked Winnepeg Goldeye, Flounder Stuffed with Crab, a meaty Swordfish or Salmon or a light Lemon Sole.

Joe Muers ensures each entree is prepared to enhance the sea food's natural fresh taste and they've been doing it well for 54 years.

Only one restaurant in Detroit can claim this tradition. It's Joe Muers!

Nissan goes to Mississippi

Gov. William Winter, of Mississippi, with the help of Tetsuo Arakawa, president of Nissan U.S.A., launches Nissan's new Memphis Regional Parts Distribution Center. The $2.5 million facility is based within the Greater Memphis Area although it actually is located in Olive Branch, Miss., just south of the Tennessee border. The warehouse, which carries a $7 million parts inventory, serves 113 Datsun dealers.

Automotive News coverage keeps phones busy at Zoe

By Jenny L. King
Staff Writer

The first call didn't go through — the 14 lines at Zoe Motors, Inc., Los Angeles, were all tied up.

A second try was successful. Daniel Levitan, executive vice president, related the multiple adventures of the company following a story with picture of the Zoe Zipper in the June 13 issue of Automotive News.

"I guess we hit a soft spot," he said, referring to subsequent newspaper coverage across North America, televised road tests and interviews and requests for franchises/sales from dealers and leasing companies across the nation.

The Zoe Zipper is a tiny, economical three-wheel motorized vehicle which is classified as a motorcycle but resembles a toy car.

"It's a cheap mode of transportation," according to Levitan, and one that appeals to anyone who needs to drive relatively short distances.

"The public is aware of the usefulness of three-wheel vehicles from traveling abroad. They're all over in Germany, France, England, Switzerland and Tokyo," Levitan said.

• He said the company's goal of 350 U. S. and Canadian dealers will be met sooner than anticipated. Zoe Motors is signing up 35 dealers on the West Coast this month. They'll include domestic and imported-car dealers, motorcycle dealers and recreation-vehicle outlets.

Dealers phoned last week from as far away as Florida and Connecticut, he said, wanting to fly to Los Angeles to talk business. There were inquiries from Hawaii, the Virgin Islands, Bermuda and Puerto Rico, plus a gentleman who owns a yacht and wants to carry Zippers for his land transportation when he's in port.

Levitan said he has "some 20-odd" Zippers currently on hand. A shipment of 200 more is expected momentarily from Japan. They are manufactured by Mitsuoka Motors, a large Honda distributor in Japan. Building Zippers, which will be available here in passenger models called 501 and 502, is the company's first major vehicle manufacturing venture, he said.

Levitan said Zoe Motors showed its Zippers at major auto shows earlier this year to thousands of visitors who raved about its looks. They then progressed from the "It's adorable" stage to asking, "How much is it?" The Zipper price of $3,000-$3,500 piqued interest further, to questions of speed, engine size, economy of operation, general usefulness, safety.

Zoe Motors hopes to sell 7,000 to 10,000 vehicles its first year here, Levitan said.

know-who *may* not be good for America.

It might be better for them to invest such capital right here in the U. S.

They'd produce jobs for unemployed auto workers instead of exporting jobs.

They could sell U. S.-made cars to the countries where they are now building new plants. They could help our balance of trade. They might even take some of the heat off us import dealers.

But you must have read, the other day, that the marketing effort of U. S. car makers in Japan has been ineffective.

European manufacturers selling *their* cars in Japan, the story went on, seem to be doing a fine job.

Is it possible that the U. S. auto makers just don't want to bother with export?

Over the past five years, my dealership has been asking the major U. S. manufacturers to let my dealership sell their cars overseas. Except for one make —who offered to let us sell cars in a country which had blacklisted them—not one has agreed to sell us their cars for export.

American manufacturers prefer to send their dollars overseas rather than their products. — **Thomas Nemet,** Chairman, American International Automobile Dealers Assn., Washington.

Total—273,409—is second-highest in 15 months

May truck sales rise 11.3 percent

Continued from Page 14

month total of 159,699 units was 6.6 percent higher than the previous year's 159,186 units.

For the month, the domestic compacts' share of the market was 58.2 percent, and for the January-May period, they accounted for 58.4 percent. A year ago through May, the imported compacts had 50.5 percent of the market.

Sales of vans also were significantly higher than a year ago for both the month and January-May period.

During the month, 50,200 panel and window vans were retailed, a gain of 21.2 percent over the year-earlier 41,424 units. The five-month total of 214,120 units was 27.8 percent higher than last year's 167,578.

The number of unsold new trucks in dealers' hands on June 1 was slightly higher than a year ago. The total was 551,148, an increase of 1.2 percent over the 544,815 units in stock at the same time in 1982.

The light-truck inventory at the end of May was 4.8 percent higher than a year ago, 511,954 units versus 488,473. Mediums were down 15 percent, from 13,406 units a year ago to 11,394, while the heavies were off 35.3 percent to 27,800 units, compared with 42,936 last year.

Ford was No. 1 in truck sales in May, but its five-month total trailed Chevrolet by almost 3,000 units.

During the month, Ford dealers retailed 88,169 new trucks, an increase of 11.8 percent over last year, and the five-month total was up 9.5 percent, from 342,790 units in 1982 to 375,426.

Chevrolet said its dealers sold 84,815 trucks in May, a gain of 1.3 percent over last year's 83,746. Through May, the total was 378,321, up slightly over the 377,747 units retailed in the same period in 1982.

May sales of Dodge and Plymouth light trucks were up 16.9 percent to 24,939 units, compared with 21,333 last year. The five-month total was 1.2 percent higher than a year ago, 109,535 versus 108,212.

GMC dealers retailed 24,519 new trucks during the month, an increase of 3.7 percent over the year-earlier 23,655. The total through May was up 1.6 percent, from 105,013 units in 1982 to 106,719.

May sales of Jeep four-wheel-drive vehicles totaled 6,777 units, an increase of 7.1 percent over last year's 6,330. The five-month count was up 3.8 percent to 25,765 units, compared with 24,876 a year ago.

Volkswagen dealers retailed 759 compact pickup trucks during the month, down 14 percent from the year-earlier 883 units. The total through May was off 55.5 percent, from 6,292 units in 1982 to 2,802.

• Sales of the non-captive imported compact pickups were significantly higher than a year ago for both May and the first five months.

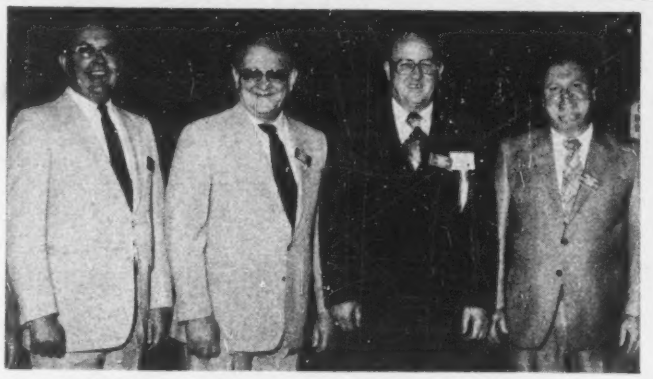
Toyota dealers sold 15,465 units during the month, an increase of 27.3 percent over the year-earlier 12,152. The five-month count was up 13.6 percent to 62,198 units, compared with 54,766 last year.

May sales of Datsun pickups totaled 11,611 units, a gain of 65.5 percent from last year's 7,014, and the January-May count climbed to 48,016 units, up 28.1 percent over last year's 37,479.

Mazda reported that its dealers retailed 6,997 units during the month, an increase of 124.1 percent over the previous year's 3,122. Through May, the total was 28,067, up 85.7 percent from the year-earlier 15,118 units.

Isuzu dealers sold 1,789 small pickups in May, a gain of 6 percent over last year's 1,687 units. The five-month total was 26.1 percent higher than a year ago, 8,919 versus 7,074.

Mitsubishi said its dealers retailed 713 trucks during May, bringing the five-month count to 3,267 units.



South Dakota officers

Elected to head the South Dakota Automobile Dealers Assn. for 1983-84 are, from left: Mark Mollers, Rapid Motors, Inc., Rapid City, president; Dan Cotton, Dan Cotton Chevrolet, Beresford, vice president; Mylo Rypkema, Dodge Town, Inc., Rapid City, treasurer, and Roger Davidson, Davidson Chevrolet, Inc., Mobridge, secretary.

Potamkin joins club for top Toyota dealers

TORRANCE, Calif. — Victor Potamkin, of Potamkin Toyota, Inc., New York, has been named to Toyota's 1983 President's 1000 Club, which honors dealers who sold at least 1,000 new units during 1982.

Although the 193 dealers in the club represent less than 20 percent of Toyota's U. S. dealer corps, they accounted for nearly 50 percent of all Toyotas sold in 1982.

New models to fill new markets

Japanese eye global 4WD market

Continued from Page 6

mountainous, and is covered with snow for at least three months a year, these tiny vans and trucks have become very popular. Last year, about 130,000 were sold in Japan, as well as 24,000 of the small Suzuki Jimny off-road vehicle. Biggest seller is the Subaru Sambar, with 44,000 units a year.

The 4WDs account for about 60 percent of sales of midget trucks and vans in Northern Japan now, although so far only a few hundred of these midgets have been exported. In the future, it is likely that more will be exported, especially to Asian countries.

For the larger 4WDs, the Japanese are looking to Africa, Australia and the Middle East for extra sales, with growth on the RV side coming in Europe and the U. S.

Up to now, the Land Cruiser has been the dominant 4WD utility vehicle produced in Japan, its main markets being Saudi Arabia (21,000), Australia (13,000) and Indonesia, where 11,000 are assembled locally from KD kits.

Its main rival at the heavy end of the market is the Nissan Patrol, which is sold principally in Saudi Arabia (12,000), Australia (7,000) and Germany.

Although many more Land Cruisers than Patrols are built, the Patrol is just ahead in Europe at 9,000 units a year. Nissan's Kanekiyo cites this as evidence that the Patrol is preferred in advanced countries.

"We are making a great effort to compete with the Land Cruiser," he said, "and one of our advantages is the 3.3-liter six-cylinder diesel, which is very smooth."

• In fact, Nissan is now poised to do even better in Europe. It took control of Motor Iberica, the Spanish truck manufacturer, in two stages, up to May, 1982, and early this year, Motor Iberica started to build Nissan Patrols.

This year it plans to build 4,000-5,000 units in hardtop, van and wagon form, and eventually, it will build 15,000 units a year for export throughout Europe. This move gives Nissan a 35 percent increase in capacity for Patrols — and it intends to increase sales accordingly.

Kanekiyo foresees most growth in the light-duty market, with vehicles of the size of the Suzuki Jimny, or Mitsubishi Pajero (Montero) and Isuzu Trooper gaining in popularity. "Most buyers are private users," he said, "so they are economy-minded, and don't need the off-road performance of the Patrol."

He also forecasts a big increase in the number of 4WD passenger cars produced, but points out that there are difficulties with front-wheel drive autos. He commented: "If we add rear drive, then the rear seat space becomes smaller, and we need a big transmission tunnel."

• Undoubtedly, the vehicle that has made the running in the medium-size or light-duty 4WD market has been the Mitsubishi Pajero, which Mitsubishi targeted at the RV market, in Japan and elsewhere.

Of course, Mitsubishi produces the Jeep under license from AMC, but cannot export it generally. It sells to private individuals in Japan, and some to the Japanese army. But Mitsubishi makes no secret of the fact that it wants to sell the Pajero to the Japanese military forces.

So far, the main market for the Pajero has been Japan. Exports started last year to Colombia and Iceland. However, this year, exports have started to the U. S., Australia and Europe, and Wake admits that it was developed to exploit potential export markets that were denied to the Mitsubishi Jeep by the agreement with AMC.

In Japan, the Pajero has become the biggest-selling 4WD owing to its modern style and wide engine range — the 2.3-liter diesel turbo is very popular — with 60 percent being sold for use as passenger cars.

To widen appeal, Mitsubishi has added a turbocharged gasoline engine to the options, and is about to introduce a long-wheelbase version, mainly for sale in the Middle East. The wheelbase is increased by 18 inches to 110 inches, with overall length going from 155 to 178 inches.

To widen its attack on the 4WD market, Mitsubishi introduced the Delica van in 4WD form last fall. This cab-over is built on basically the same chassis frame as the Pajero, so all the mechanical units are common to both — as they are to the Forte pickup truck.

Wake is very optimistic about sales of the Delica 4WD.

"It has no competition now," he said. "In May we started shipments to Europe, and we shall start selling in the U. S. soon. We expect to produce well over 1,000 a month."

But Wake does not expect to have the field to himself long; Toyota and Nissan are both developing 4WD cab-overs. Then, Mitsubishi and Nissan are developing 4WD versions of their multi-purpose cars — the Chariot and Prairie respectively, so the proliferation of 4WDs in Japan is well under way.

Strangely, though, the Japanese auto companies express no interest in "full-time" 4WD, pioneered by Land Rover on the Range Rover and Audi on the Quattro.

Said Kanekiyo: "Customers want better part-time 4WD, which is easier to use. Fuel economy is better with part-time 4WD, especially with free-wheeling hubs."

Mitsubishi and Toyota agree that the conventional 4WD is better than new technology, presumably because unlike Audi and Land Rover, they are tackling the bottom end of the market. But that is where the market and growth are.

Leading Japanese four-wheel-drive vehicles in 1982

	Production	Domestic	Exports
1. Toyota Land Cruiser	129,000	8,000	126,000

* Passenger car introduced in the fall of 1982.
Domestic sales and export figures do not always equal production total owing to time lag in sales.

Pace is five weeks ahead of 1982

Year's auto output tops 3 million

By Mary Beth Mayer
Staff Writer

The domestic auto makers reached a milestone last Thursday (June 16) as the three-millionth automobile of 1983 was assembled, about five weeks earlier than in 1982. Last year, the three-million mark was reached July 23.

So far this year, the manufacturers have assembled 3,035,351 cars, a 23.79 percent gain from 2,452,088 units finished in the comparable 1982 period.

Breakdown for the year-to-date production by company is: General Motors, 58.82 percent; Ford Motor Co., 23.13 percent; Chrysler Corp., 13.29 percent; American Motors, 2.82 percent; Volkswagen of America, 1.41 percent, and Honda, 0.53 percent.

Last week's estimated production was 146,277 units, a 1.79 drop from the previous week's 148,945. Output, however, was up 7.06 percent from last year's 136,630.

Ford's Dearborn plant was down last week (June 13) for inventory adjustment. The facility was idled June 6. Volkswagen of America's Westmoreland plant was closed due to overstocked inventory.

Ford's Chicago, St. Louis and Wixom plants worked daily overtime last week.

GM's Arlington, Baltimore, Fairfax, Flint (G line), Janesville, Lordstown and Pontiac points worked Saturday.

Chrysler's Belvidere, Jefferson and Newark plants worked two daily nine-hour shifts last week.

Dealers balk at settlement in Mid-Atlantic Toyota case

BALTIMORE. — The proposed settlement of a price fixing suit against Mid-Atlantic Toyota Distributors, Glen Burnie, Md., and about 100 Toyota dealers has hit a snag because the required two-thirds of the dealers did not agree to the settlement by the June 3 deadline.

The settlement, which was approved on a preliminary basis by a U. S. District Court judge May 27, would have Mid-Atlantic Toyota and the dealers contribute a total of $4,825,000 to reimburse 36,000 Toyota owners in six states who allegedly were forced to purchase some $500 worth of rustproofing and other car protection services.

Under the terms of the settlement, each buyer would receive either $135 in cash or a certificate worth $250 in goods and services from participating Toyota dealers.

By June 3, however, only 34 of the 100 dealers had agreed to the settlement, according to Michael Brockmeyer, of the Maryland attorney general's office.

• The state has decided to settle with the dealers who did sign, Brockmeyer said, and prosecute those who didn't.

"The non-settling dealers already are defendants in the case, so we won't have to file separately for this action," he said.

Reimbursements to Toyota owners were to have begun in March, 1984, but Brockmeyer said those reimbursements would be delayed while prosecution continues.

"It depends on whether the case is settled out of court or goes to trial," he said. "It could be a lengthy trial."

The entire agreement is not in jeopardy, Brockmeyer added, since Mid-Atlantic Toyota has already paid $1.7 million into a fund that eventually will be used to compensate the Toyota owners.

"That money is already in the bank and drawing interest," he said.

The 100 dealers named as co-defendants in the case are located in Maryland, Virginia, Delaware, Pennsylvania, West Virginia and the District of Columbia.

Spokesmen for Mid-Atlantic Toyota declined comment.

Two U.C. firms to pay $85,000 to rollback buyers

BOSTON. — Two used-car firms, one in Norwood and the other in Lynn, have agreed, without admitting to allegations contained in Suffolk County Superior Court charges, to pay $85,000 to people who bought cars on which odometers had been illegally changed.

Dear Street Auto Sales, Norwood, and Bennett Street Auto Sales, Lynn, agreed to judgments requiring them to pay $50,000 and $35,000, respectively, with car owners affected to split the money as it is paid in regular installments by the two firms.

Dean Street Auto Sales had been charged with altering the odometers of 49 vehicles, while Bennett Street Auto Sales had been charged with altering odometers of 42 vehicles.

Steven E. Kramer, state assistant attorney general, estimated that Dean Street customers would each get about $900, with those who bought vehicles from Bennett Street to get about $750.

Millionth truck produced 11 days before last year's

The domestic truck makers assembled the year's one-millionth truck last Monday (June 13), eleven days earlier than last year.

Year-to-date, there have been 1,051,114 trucks assembled, up 9.49 percent from last year's 960,000.

Last week's domestic truck output was estimated at 52,911, down slightly from the 53,085 built during the previous week. Output, however, was up 7.41 percent from last year's 49,261.

Ford Motor's Kansas City, Lorain, Louisville, Norfolk and Twin Cities points worked daily overtime last week (June 13). The Kansas City, Norfolk, Michigan and Twin Cities facilities also worked Saturday.

Chrysler Corp.'s Belvidere plant worked two daily nine-hour shifts and the Warren point worked one daily nine-hour shift last week.

General Motors' Janesville, Lordstown and Pontiac Truck & Bus plants worked six days.

Return at Ford boosts production of Canadian cars

Canadian auto production last week rose 5.65 percent from the previous week's total due to the return of Ford Motor's St. Thomas car facility, which offset downtime at Chrysler Corp.'s Windsor car plant.

The auto makers scheduled 24,164 units last week, up from 22,871 built during the previous week. Output also rose 6.91 percent from last year's 22,602.

So far this year, 493,913 cars have been completed, up 11.02 percent from 444,905 built in the comparable period last year.

Truck output, at 12,528, was only 11 units higher than the previous week's total. That figure is down 3.92 percent from last year's 13,039.

Year-to-date, 253,552 trucks have been built, down 3.96 percent from 264,009 in the year-ago period.

Ford's St. Thomas plant returned last week (June 13) after being idle two weeks for inventory control.

Chrysler's Windsor car point is being retooled for assembly of the 1984 front-drive T-115 van/wagons scheduled to begin in October.

International Harvester's Chatham and Vancouver facilities remained closed for model changeover. Operations there, idled May 23, are scheduled to resume July 25.

Isuzolet?

Jim Dunne

Chevy readies FWD subcompact for '85

Chevrolet dealers will begin selling this Isuzu-made front-drive two-door hatchback, plus a companion four-door sedan, beginning in the '85 model year. The "R" body, as it has been called, will have a wheelbase of 92-93 inches with standard power a 1.8-liter four-cylinder engine. No names yet. Note the Chevrolet "bow tie." Pontiac dealers will also get a version of the car.

High court strikes down rescission of air-bag rule

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The Reagan Administration's rescission of the passive restraint standard has been unanimously overturned by the U. S. Supreme Court.

Both automatic belts and air bags are affected.

The court said NHTSA failed to present an adequate basis and explanation and must either consider the matter further or adhere to or amend Standard 208 along lines which its analysis supports.

The majority opinion said one reason NHTSA's rescission was arbitrary and capricious was that the agency gave no consideration to changing the standard to require air bags. Further, NHTSA's conclusion that detachable automatic belts invited non-compliance was not enough by itself to justify more than amending the standard to disallow such detachable belts.

The court also criticized NHTSA for underestimating the safety benefits of automatic belts.

• The justices agreed in part and disagreed in part with the opinion overturning the rescission written by the federal appellate court for the District of Columbia.

The court, in a footnote, suggests that NHTSA can suspend the standard, pending further consideration, and that is the likely effect, since NHTSA could not put the standard in effect for 1984 models because of required leadtime for the companies.

In October, 1981, then Safety Chief Ray Peck rescinded the modified Standard 208 on grounds that most auto makers would use automatic belts easily detached and hence no better than manual belts.

Whatever the use of automatic belts, said the Supreme Court, this does not "disallow compliance by means of one technology which will not provide effective passenger restraint."

This does not "cast doubt" on the need for the standard nor on the "efficiency of air-bag technology," the court said.

Even though NHTSA acknowledged the "life-saving potential" of air bags, the court notes, it did not proceed to the "logical response" — requiring use of air bags.

• Further, the court notes, the fact that makers chose automatic belts over air bags "hardly constitutes cause to revoke the standard itself."

In fact, the law was passed because Congress thought the "industry not sufficiently responsive to safety concerns."

Besides, the act intends standards should be "technology forcing."

While the court stresses it does not require any specific procedures for NHTSA nor even that NHTSA consider all "policy alternatives," it then says that the air bag is more than a "policy alternative" — it is a "technological alternative within the ambit of the existing standard."

Analysis of auto pay finds many 'facts' false

Copyright, 1983, Automotive News

Quiz time. Answer true or false:

1. Japanese auto executives are paid far less than their counterparts in the U. S.

2. Executives of the U. S. auto makers are paid more than executives at the firms that sell them goods and services.

3. The chairman of General Motors made more than the chairmen of Ford Motor Co. and Chrysler Corp.

The answers: False; false; false with a disclaimer.

The first examination by Automotive News of the salaries and incomes of executives in the U. S. and Japan broke one common-knowledge "fact" after another.

And it showed the 101 top-paid executives in the U. S. auto industry made $46.9 million in salaries and bonuses in 1982 — close to half-million dollars apiece in a year when corporate sales were low and losses so frequent that most companies weren't awarding bonuses.

That total also doesn't include the money many executives were able to make when stock market prices finally beat their stock-option prices, thanks to a high-flying Wall Street.

There were 127 U. S. auto executives from publicly traded companies last year with reported salaries and bonuses of $300,000 or more.

The real number is undoubtedly higher, because the government requires that each company list only its five highest-paid executives in its proxy statement.

• Supplier companies' executives took the top 18 spots.

At No. 19 was Roger B. Smith, chairman of General Motors, the world's largest auto maker; the country's second-largest industrial corporation, according to the Fortune 500; a company that sold more than $60 billion worth of goods and services and made close to a billion in profit.

Executive income list, Page 49

Ford Chairman Philip Caldwell ranked 39th.

Lee A. Iacocca, whose Chrysler Corp. bought supplies from 14,000 different firms last year, had 78 executives—most of them suppliers—ahead of him on the list.

American Motors Chairman W. Paul Tippett was nearly at the bottom with his rank of 82.

Of course, there's more to an executive's income than salary and bonus. There are stock options.

With the cooperation of investors bullish on autos and stocks in general, executives at Chrysler and Ford traded in some of their long-held options for stock, and made some nice gains in 1982 or possibly early 1983.

GM and AMC executives

Decision on GM-Toyota delayed till September

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A decision on the legality of the proposed General Motors-Toyota joint venture in California by the FTC is probably off until September, at the earliest.

This is because of the delay—primarily by Toyota—in getting additional material to FTC staff.

A letter sent by FTC Chairman James C. Miller II to Rep. Peter W. Rodino III, chairman of the House Judiciary Committee, explains that GM response may be expected in June but Toyota's—which has some severe translation problems, especially because of the sensitivity of business data—may not be in the hands of FTC investigators until the middle or end of July.

Miller also says the FTC may "if necessary" hold investigational hearings.

Known opponents to the joint venture include both Chrysler and Ford Motor Co. and probably other competitors like American Honda and Nissan U.S.A., whose investment in the U. S. have already exceeded Toyota's planned expenditure. Opposition from other car makers as well as from machine tool makers and parts producers would also be a reasonable surmise.

FTC hearings, if they occur—would be closed to the public as is the entire investigation.

• The House Judiciary Committee and/or its Antitrust Subcommittee has expressed some interest in looking at the antitrust implications of the proposed joint venture. Although both GM and Toyota appear confident the FTC will rule in their favor, it is not generally viewed as certain.

FTC could take no action — theoretically allowing the companies to proceed—but other interested parties, like auto company competitors, could file private law suits.

FTC could also issue an administrative complaint or ask a federal court to issue an injunction blocking the agreement.

If FTC objects to the joint venture, the agency will make such an announcement; if FTC decides to do nothing, then the companies will make their announcement of intentions to proceed.

Honda opens way to plastic car with Ballade CR-X

TOKYO. — Honda has leapt into the plastics era with its new Ballade Sports CR-X coupe.

It is using plastic panels for the front fenders, panels covering half of the doors and the nose panel, which includes headlamp recesses and small covers.

Honda engineers stress that these are cheap injection moldings unlike the expensive panels used by General Motors. The panels are produced from a mixture of ABS and polycarbonate "Plus Alpha."

Honda sees this development as opening the way to the plastic car and says that almost half of the development was involved in finding suitable primers and paints that were flexible and which could be repaired in an ordinary garage.

breaking news

'84 Camaro Berlinetta gets whizbang interior

Chevrolet will expand its use of the Corvette-type whizbang instrumentation to include the Camaro Berlinetta. The '84 Berlinetta will have a standard digital speedometer/odometer and bar-graph tachometer and pushbutton pods will replace most stalk-operated controls. Redesigned steering wheel, a roof console and General Motors' ETR stereo will be new standard Berlinetta features.

Chevrolet tweaks '84 Cavalier

DETROIT.—Chevrolet will revise its J-body Cavalier for 1984 with a restyled front end using quad rectangular headlamps, a new grille and color-coordinated bumper fascia. The base Cavalier coupe has been dropped. Cavaliers will also have revised front suspension.

Attorney says $7.5 million already secured for bankrupt DMC

DeLorean supports reorganization

By Edward Lapham
Senior Editor

DETROIT.—John Z. DeLorean apparently still wants to live the dream.

The former auto maker is one of the backers of a plan to reorganize his bankrupt DeLorean Motor Co., it was disclosed in U. S. Bankruptcy Court here last week.

Anthony Castanares, a Los Angeles attorney with the prestigious bankruptcy law firm of Stutman, Triester & Glatt, told the court he represents DeLorean and Henri Foussard and asked for additional time to revise a reorganization plan while his clients seek additional investors.

Castanares said his clients already have secured $7.5 million in financing. "I'm not at all surprised to discover Mr. DeLorean is involved," creditors committee chairman Malcolm Schade said following the hearing.

In February, California attorney James R. Gorman approached the court, claiming to represent a group of investors who wanted an exclusive period to propose a reorganization plan to the court and the creditors committee.

At that time, Gorman told the creditors committee neither DeLorean nor his associate Roy S. Nesseth were involved in the deal, Schade said in court.

The court granted an extension of the exclusive filing period after Gorman's investor group in early March posted a $100,000 good-faith deposit subject to forfeiture.

The creditors committee was in court last week seeking forfeiture of that good-faith deposit, claiming the reorganization plan, filed April 25, was a "sham and a fraud" and an attempt by former management of the company to terminate corporate wrongdoing investigations by the creditors committee and court-appointed examiner Price Waterhouse.

A possible reorganization plan link to DeLorean was discovered in April. At a Los Angeles hearing on federal drug trafficking charges against DeLorean, a bank official testified a DeLorean-owned company supplied the $100,000 used for the good-faith deposit to Gorman.

• Judge George Woods adjourned the hearing on the motion for forfeiture and further discussion of the reorganization plan until Wednesday (June 29) following nearly five hours of hearings last week.

Although the court deferred action, Judge Woods said the plan, officially offered by Madison SA, a Swiss-based Panamanian corporation, seemed to be "the only game in town" and the only hope of reorganizing DMC, which has been in Chapter 11 since Oct. 19, 1982.

Castanares said it could take six or eight months to reorganize the company and asked the court for 30-day incremental extensions in the exclusive filing period, which was due to have expired June 25 but was temporarily extended by the court until after the June 29 hearings.

Castanares said as much as an additional $20 million in funding might be necessary to relaunch the company and that "two potential major investors" already have withdrawn because of adverse publicity connected with the case.

He also disclosed that Donald Lander, a former Chrysler Canada president and DMC vice president, was acting as a consultant to the investor group and that two other former DMC employes, including financial officer T. Joseph Daly, also would be consultants.

In a related action, the court denied a petition by DeLorean seeking to withhold certain bankruptcy-related testimony by former DMC officials from the public record.

Bricklin's back in the driver's seat

Malcolm Bricklin, seated in the Spider on the right, and some of the International Automobile Importers, Inc., staff members welcome the first Bertone X 1/9 and Pininfarina Spider to arrive at their new corporate headquarters in Montvale, N. J.

DeLorean wins delay in drug trial to Oct. 4

LOS ANGELES. — John Z. DeLorean has won a two-month delay of his trial on drug-trafficking charges. The court set back the Aug. 9 trial date to Oct. 4 at the request of DeLorean's attorneys.

In the motion to delay the trial, DeLorean's attorneys suggested that the British Government was behind the sting operation that netted DeLorean and two others, Stephen Lee Arrington and William M. Hetrick.

Hetrick has changed his plea to guilty on the drug charges and awaits sentencing, set for Oct. 31.

Court documents which were made public last week indicate that DeLorean met with Lee Iacocca to discuss possible sale of Chrysler Corp. to a partnership directed by DeLorean.

They also showed that DeLorean sought a $300 million loan for purchase of American Motors' Jeep and AM General operations and also that he planned to spend almost $100 million on development of the Stirling engine for automotive use.

The documents, collected last month by attorneys for unsecured creditors of the defunct DeLorean Motor Corp., also revealed a DeLorean proposal to join forces with Ford Motor Co., to lease ships and transport oil and to build cars in Mexico.

A Chrysler spokesman said his firm will not comment on the DeLorean papers. An AMC spokesman said that Jeep was not and is not for sale and that AM General (now up for sale) was not on the block in 1977 when DeLorean sought the loan.

A DeLorean memo dated Jan. 17, 1980, said Iacocca had "been spoken to by 123 groups purporting to represent Arab petrodollar investors, including the Saudi ambassador."

Documents indicated that DeLorean wanted to take immediate control of the Chrysler board of directors "to prevent dissipation of assets" and that he planned for Chrysler's dealer network to sell the DeLorean sports car.

May be manufacturing electric cars by 1985

UK magnate eyes DeLorean plant

By Richard Feast
European Editor

LONDON. — The former DeLorean plant in Northern Ireland may be manufacturing electric cars by 1985 if a plan by one of Britain's most successful businessmen goes ahead.

Sir Clive Sinclair, head of Sinclair Research, an electronics group, has taken an option on many of the assets at the Dunmurry plant from the DeLorean receivers.

At the same time, Sinclair's name has been linked to various attempts at solving the long-running financial uncertainty which surrounds Group Lotus.

So, too, in recent weeks have Toyota of Japan — with whom Lotus will build a sports car starting next year — and David Wickins, chairman of British Car Auctions and the man who has led a recent expansion drive into the U. S.

Sinclair, 42, is a self-made millionaire and a self-confessed car buff. He recently established a separate company, Sinclair Vehicle Project, with nearly $15 million of his own money.

The attraction of the DeLorean plant centers on its facilities to produce vacuum assisted resin injection (VARI) moldings.

Sinclair's battery-powered vehicle would certainly use this method of technology for the body work—or, more likely, a modified version of it in which the paint is impregnated at molding stage.

The system was developed by Group Lotus and was used in DeLorean production following the development work on the car completed by Lotus. The latest system, known as VARIP, will be ready for use during 1984.

Sinclair toured the recent Geneva Auto Show in company with Lotus Chairman Fred Bushell and other Lotus directors. At the time, Lotus Managing Director Mike Kimberley made light of the association.

"We're just helping Clive with his electric car project," Kimberley explained.

It now seems increasingly likely that Sinclair's interest in Lotus extends beyond purchase of production techniques.

Group Lotus still requires a major cash injection to ensure that its Toyota-engined M-90 sports car gets into production for launch in the fall of next year.

It also has the more immediate problem of settling its $1.5 million debt with American Express.

Amex has extended the loan facility pending an independent report into the financing and management of the company by merchant bankers Guinness Mahon.

That report was due to be discussed by the Group Lotus board at the end of last week.

While its recommendations remained secret, the reasons for its commission in the first place concerned Lotus financial troubles and the shock waves caused by the unexpected death late last year of founder and chairman Colin Chapman.

The whole affair has set tongues wagging in London, where Group Lotus is a publicly quoted company. Share prices began to flutuate as various rumors about the outcome of Guinness Mahon's report appeared.

• One linked Toyota, the company which will supply drivelines for the M-90 sports car. Another concerned Wickins, who has recently been buying into the U. S. auction market. Sinclair is a third candidate for a stake in Lotus.

It seems unlikely that any will take full control of Group Lotus, which is 51 percent owned by nominees of various Chapman trusts, family members and by Bushell. Instead, a financial package by one or more — or others — seems the most likely outcome.

Sinclair is reputed to have made more than $150 million out of his company's advanced electronic products.

These include pocket calculators and the world's first mini computer, known as ZX. Among its current projects are a miniature flat-screen TV and a new personal computer which is expected to undercut the prices of its rival products.

Sinclair has been so successful that almost any innovation which he undertakes has to be taken seriously.

While he has no first-hand knowledge of the auto industry, he has hired Barrie Wills, former DeLorean purchasing director, to head the battery-car project.

The electric vehicle will use conventional lead-acid power packs, but if past Sinclair products are anything to go by, there will be considerable flair and imagination in the remainder of the specification.

Sinclair is very serious about the battery car. If the purchase of the DeLorean factory goes ahead, it will mean a considerable boost for Northern Ireland.

The DeLorean factory closed last October, after protracted and hopeless attempts were made to refinance the project on both sides of the Atlantic. It caused a major worsening in unemployment in an area that is one of the worst hit in Europe.

Chicago Auto Show moved to earlier date

CHICAGO. — The Chicago Auto Show will be held Feb. 11-19 in McCormick Place.

The show traditionally has been held later in the month. It is sponsored by the Chicago Automobile Trade Assn.

House unit reports UAW-backed law on domestic content

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The measure to require auto makers to reach certain levels of domestic content by 1985 and later models has been reported by a comfortable margin of 25 to 17 by the House Energy and Commerce Committee.

This bill backed by the UAW and certain industrial unions of the AFL-CIO, is designed to curb foreign outsourcing of parts and components by the U.S.-based companies and to encourage foreign makers to build manufacturing plants in the U. S. and buy American parts and use American labor.

Despite formidable opposition of all import auto companies and all domestic ones (except Chrysler), the bill may again pass the House as it did last year.

The bill was referred to the House Ways and Means Subcommittee on Trade for consideration, but whatever that group decides to do, the bill as reported by the Dingell Committee can eventually be referred to the House Rules Committee for a go-ahead for floor consideration.

A companion Senate bill, whose chief sponsor is Senator Donald Riegle, of Michigan, Riegle has not yet seen any action this Congress. The chairman of the comparable Senate committee — Senator Robert Packwood, Oregon Republican, is opposed to the bill.

As reported, the House bill contains the UAW content ratio formulae, but it received major amendments by Rep. James Florio, New Jersey Democrat; Rep. Dennis Eckart, Ohio Democrat, and Rep. Richard Ottinger, New York Democrat, who has been the major sponsor.

It was heavily aided by Rep. John Dingell, Michigan Democrat, whose committee presented the first major step. Republican attemtps to change the bill were defeated.

Florio's contribution was to include an automotive products strategy study to be made by the Secretary of Transportation in consultation with the U. S. Automobile Industry Advisory Council.

The strategy would be to increase domestic production and sales, but exclusive of macroeconomic measures to stimulate general economic growth and deregulation.

The Secretary, on a regular basis, would analyze the auto products market — production and sales and projections of both plus estimates of domestic content along with the factors affecting those areas.

• Before the first anniversary of enactment, the Secretary would report to the President and House and Senate Commerce committees on the initial strategy, and each year thereafter he would update the report with changes and any actions taken and any results therefrom.

But before this report, the Secretary would consult with the advisory council, which could append its own views to any government report.

Under the original Florio amendment, the council would have had 10 members, five from labor, four from auto management and one from auto parts management.

After a futile attempt by Rep. William Dannemeyer, California Republican, to broaden the council to include five consumer or public members (including some with special expertise), Ottinger stepped in to broaden the council to include three consumer representatives — bringing the total membership to 13 but not allowing the "imbalance" he found in the Dannemeyer proposal.

To choose these consumer representatives, the House would make three nominations for two appointments, and the Senate would make two nominations for one appointment.

Dannemeyer noted that the council might be illegal under the Federal Advisory Council

New Mustang convertible off to good start

The 1983 Ford Mustang GT convertible's standard powertrain is a 5.0-liter, four-barrel V-8 with five-speed manual transmission. So far this calendar year, 25 percent of the Mustangs sold have been GTs and 20 percent have been convertibles, according to Ford. The Mustang GT convertible went into production in May.

Car sales hit the roof: Up 74 pct. in mid-June

By Jenny L. King
Staff Writer

Maybe—just maybe—it's here. The U. S. auto industry took a giant step on the road to recovery with a 74.41-percent sales increase in the June 11-20 period. This followed a 20.04-percent increase the first 10 days and was the 13th plus period so far this calendar year. Maybe the long recession is turning into a time of growth.

All major domestic auto makers reported sales gains for the mid-month period, and the sum of their efforts totaled 205,444, up 74.41 percent from 117,795 a year earlier. It was the best total for June 11-20 since 1979 when 258,468 new cars were retailed. Record for the period was 311,044 set back in 1973.

The daily selling rate averaged 25,681, up 74.41 percent from 14,724 a year earlier, and up 9.96 percent from 23,354 the first 10 days of June. There were eight selling days both years mid-month, and nine selling days the first period this June.

Based on the sales of 205,444, annualized sales reached 7,343,000 projected for 1983.

For the mid-June period, General Motors sales climbed 77.57 percent, to 121,629 from 68,498 in 1982. Ford Motor Co. was up 60.82 percent, to 49,502 from 30,781. Chrysler jumped 77.08 percent, to 26,091 from 14,734.

Chrysler and VW deny rumor of plant deal

DETROIT. — Chrysler Corp. and Volkswagen of America denied late last week that the two firms have reached an agreement or contemplated reaching an agreement for the Chrysler acquisition of another VWoA manufacturing plant in Westmoreland, Pa.

Such an agreement had been rumored for weeks and had made it into print in the daily press here.

A VWoA spokesman "irrevocably denied" any substance to the rumor.

In a formal statement, Chrysler confirmed that there have been continuing discussions with Volkswagen officials regarding the already announced intention of Chrysler to purchase a VWoA assembly plant in Sterling Heights, Mich. It is expected that the purchase of that plant from Volkswagen will be completed next month.

Chrysler said that there have been discussions between Chrysler and Volkswagen personnel, including Chrysler Chairman Lee A. Iacocca and Volkswagen Chairman Carl Hahn. Chrysler said these involved worldwide business opportunities; assessments of North American, European and other world markets, and the impact of trade restraints in North America, Europe and the Far East.

Chrysler reiterated that no agreements have been reached between the two companies except the agreement to purchase the Sterling Heights assembly plant.

• Under the terms of the Chrysler Loan Guarantee Act, Chrysler is required to engage in conversations with other automobile manufacturers regarding possible joint ventures and other business relationships. These conversations have taken place over the entire three-year span of the Loan Guarantee Act and are expected to continue, Chrysler said.

According to the denied rumor, Chrysler would have taken over Westmoreland to build its new R-car replacement for the aging Omni and Horizon, and would have assembled Rabbits for VW in the plant, as well.

A Chrysler-VW deal on Westmoreland would complete a circle that began in 1976 when VW bought the plant from an ailing Chrysler Corp.

Chrysler had built the plant in the late 1960s, but never outfitted it. It stood empty ("the biggest dirt floor in the world") from 1970 until the fall of 1976, when VW took it over. It assembled its first VW Rabbit on April 10, 1978.

When VW acquired Westmoreland, Chrysler was in the first stages of a desperate and worsening financial situation. A booming Volkswagen came riding to the rescue.

Now, less than seven years later, the shoe is on the other foot. Volkswagen's fortunes have sagged in this market and Chrysler is roaring along the comeback trail.

Pacific adds pizzazz

The Pacific Firebird body kit enhances the styling of Pontiac's two-plus-two model. The kit consists of front air dam, replacement front fenders, rocker panels and quarter panels which fit over the existing panels. Maker Pacific T-Top, Huntington Beach, Calif., sells the package to dealers for $997. An optional whale tail is also available.

Keller quits as auto analyst to become money manager

NEW YORK.—Maryann Keller, ranked the country's top automotive investment analyst, is leaving Paine Webber Mitchell Hutchins, Inc., to become a money manager for Vilas-Fischer Associates.

Keller has been voted top auto analyst for four consecutive years by subscribers of Institutional Investor. On July 13, she will give the Automotive News World Congress her forecasts for auto stocks.

"I had been doing sell-side auto analysis for 11 years and was reaching the point where things were becoming somewhat repetitive," Keller said of her move.

She said she is looking forward to actually participating in the investment process, rather than merely recommending purchases as an analyst. She will study automotive stocks and possibly those of other industries as well, she said.

Keller came to Paine Webber in 1980 as first vice president, analyzing auto manufacturers' and parts makers' finances. Before that, she was an auto analyst, vice president and the first woman to be elected stockholder of the investment banking firm of Kidder, Peabody & Co.

She received her masters degree in business administration from the Bernard M. Baruch School, City University of New York, and held financial and marketing positions at the Celanese Corp. and BASF Corp.

She has been replaced at Paine Webber by Ann Knight, an auto analyst from Smith Barney. Smith Barney didn't have an auto analyst when Knight joined the investment firm two years ago. She set up the company's files during a year of research in Detroit.

Total is 728,409, highest of 1983

New-car registrations rise 8 pct. for month

By Jenny L. King
Staff Writer

New-car registrations in April were the highest of any month this calendar year, according to figures compiled by R. L. Polk & Co. The industry total was up just one-half percent over March, 1983, but climbed 8.35 percent above the year-ago April sum.

Registrations of new domestic cars were up 2.87 percent from March, going to 520,198 from 505,677. Compared with April, 1982, domestics were up 7.04 percent, to 520,198 from 485,992.

Imports numbered 208,211 in April of this year, up 11.78 percent from 186,261 for the same month of 1982, but off 4.92 percent from the 219,234 reported in March of this year.

Total registrations in April added to 782,409, up 0.48 percent from 724,911 in March, and up 8.35 percent from 672,253 in April, 1982.

R. L. Polk & Co. counts all U. S.-built Hondas, Volkswagens and Renault Alliances as imports. Also included in that category are Mitsubishi-built Plymouth Colt and Sapporo and Dodge Colt and Challenger which are marketed by Plymouth/Dodge dealers.

In April, Chrysler Corp. and the combined imports increased their shares of the total market; American Motors, Ford Motor Co., General Motors and miscellaneous domestics lost varying amounts of ground.

• Chrysler was up 0.72 percentage points, to 10.47 percent from 9.75 percent last year. The imports gained 0.87 percentage points, climbing to 28.58 percent from 27.71 percent. Their best April was in 1981, when they accounted for 30.33 percent of the U. S. market.

Ford dropped 1.12 percentage points in April, stopping at 16.08 percent, down from 17.20 percent a year ago. GM was off 0.01 percentage points, dipping to 44.15 percent from 44.16 percent; AMC was down to 0.71 percent from 1.15 percent, and miscellaneous domestics shrank to 0.01 percent from 0.03 percent.

Of the market excluding imports, GM claimed 61.82 percent, Ford had 22.51 percent, Chrysler had 14.66 percent, AMC had 1.00 percent and miscellaneous makes had 0.01 percent.

A year earlier, GM earned 61.09 percent, Ford had 23.79 percent, Chrysler had 13.48 percent, AMC had 1.60 percent and miscellaneous had 0.04 percent.

In the four-month market, the same segments as in April — Chrysler Corp. and the imports — improved their lot compared with 1982 shares. Chrysler was up 0.84 percent, to 9.65 percent from 8.81 percent. Imports claimed 30.54 percent, up 1.45 percentage points from 29.04 percent.

• GM was down 1.41 percentage points, to 42.48 percent from 43.89 percent. Ford dropped 0.36 percentage points, to 16.51 percent from 16.87, AMC was down 0.50 percentage points to 0.81 percent from 1.31 percent and miscellaneous domestics were off 0.02 percentage points to 0.01 percent of the market.

Imports accounted for the largest single piece of the April market, at 28.58 percent. The other market class shares included: Intermediates, at 25.96 percent, compacts at 16.18 percent, standards at 13.86 percent, subcompacts at 9.97 percent and luxury models at 5.45 percent.

A year earlier, imports claimed 27.71 percent, followed by intermediates at 21.74 percent, compacts at 19.09 percent, subcompacts at 16.22 percent, standards at 9.99 percent and luxury cars at 5.25 percent.

Nissan plant in U.S. is off to early start

By Jack Walsh
Truck Editor

SMYRNA, Tenn. — Compact pickup trucks began rolling at a rate of six units a day at the new Nissan manufacturing and assembly facilities here after a production startup June 16 two months ahead of schedule.

By late November, output is expected to reach 7,500 vehicles a month on one shift, with a peak of 10,000 units monthly due by the middle of next year, according to Marvin T. Runyon, president, Nissan Motor Mfg. Corp. U.S.A.

Currently, the plant is producing 1983½ model two-wheel-drive trucks only. Production of four-wheel-drive vehicles is expected to begin in October.

Vehicles built in Smyrna will be distributed initially in the South and Southeast, with units imported from Japan supplying other markets in the U. S. When Smyrna reaches peak production, Nissan trucks no longer will be imported.

Runyon, in a uniform identical to those worn in the plant by production employes, was at the wheel of the first truck off the line June 16. Job 1 was a white long-bed pickup with a blue interior and deluxe trim, gasoline engine and automatic transmission.

• The next four vehicles off the line featured five-speed manual transmissions. No. 2 was a diesel, No. 3 was a King Cab with a short bed and the fourth and fifth units were long beds.

Runyon said Job 1 will be placed on permanent loan to the Tennessee State Museum in nearby Nashville after the plant's grand-opening and week-long dedication activities in October. The truck will be part of the museum's "Made in Tennessee" collection.

The startup in Smyrna coincided with the 50th anniversary of the U. S. subsidiary's parent firm, Nissan Motor Co. Ltd., Tokyo, the world's fourth-largest auto/truck manufacturer.

Ground for the plant, on a 782-acre site, was broken in February, 1981, and the construction and startup costs represent an investment of more than $660 million, Runyon noted.

"The investment will grow to

Job One rolls at Smyrna

Proud and pleased, employes of Nissan Motor Mfg. Corp., U.S.A., escort first Nissan pickup truck built at Smyrna, Tenn., out of the plant. Output started two months ahead of schedule, with a beginning rate of six trucks a day. This is expected to grow to 10,000 a month by the middle of next year.

AMC sees 21 pct. gain in 4x4 market by '85

By Joseph Bohn
Marketing Editor

The total four-wheel-drive vehicle market will grow from an estimated 616,300 sales in 1983 to 743,500 in 1985, an increase of almost 21 percent, according to American Motors projections.

And compact sports-utility vehicles, like the downsized Jeep Wagoneer and Chevrolet Blazer S-10, along with compact 4WD pickup trucks are projected to be the fastest-growing segments of the market.

Compact sports-utility vehicles are expected to go from 95,000 sales, or 15.4 percent of the market, to 171,900 sales, or 23.1 percent market share by 1985.

At the same time, compact 4WD pickups will go from an estimated 140,000 sales, or 22.7 percent of market, to 191,900 sales, or 25.8 percent of the market in 1985.

By 1985, small sports-utility vehicles, like Jeep CJ, will have only 3.8 percent of sales, and the large sports-utility vehicles like full-size Broncos and Grand Wagoneers, 5.9 percent. Full-sized 4WD pickup trucks are expected to get 23.5 percent.

• In looking at demographics, AMC projects that its 1984 model Grand Wagoneer (the current full-size Wagoneer) will have a median buyer age of 47 with a median income of more than $55,000.

Median age and income of the downsized Wagoneer is expected to drop to 42 years and $50,000, respectively.

The projected average median income for all compact utility buyers next year is expected to be $35,000, with a median age of about 33.

Full-size '83 Ramcharger buyers, AMC noted, tend to be several years younger with an income of several thousand dollars less than do Cherokee buyers.

Turtle Top adds van headroom

Turtle Top, Inc., Goshen, Ind., is adding eight inches of headroom to its van-conversion interiors with a new fiberglass top option. It features two tinted, radius-cornered windows in front and is color-coordinated to match the vehicle's exterior. It also has indirect lighting along all sides.

Japanese firm, Rockwell join in axle venture

TROY, Mich. — Rockwell International and Press Koygo Co., Ltd., headquartered in Kawasaki City, Japan, have announced the formation of a joint venture to produce Rockwell-designed planetary axles for the Far East off-highway construction equipment market.

The new company, known as Press Kogyo-Rockwell Co., Ltd., will function from facilities located in Fujisawa City, near Yokohama. Initially, the company will assemble and market American-made Rockwell planetary axles. Customer deliveries of planetary axles are slated to start in September.

Under the agreement, Rockwell and Press Kogyo will have a 49 and 51 percent interest, respectively, in the new company.

Arthur P. Ronan, president, Rockwell's Heavy Vehicle Components Operations, said the joint venture is consistent with the company's strategic objective of applying Rockwell's advanced technical resources in designing and engineering planetary axles for the Far East.

"For Rockwell," Ronan said, "the joint venture provides us with a foothold in this important geographic market. For Press Kogyo, it means moving into this market with the most technically advanced product available."

Press Kogyo is an automotive components supplier with five manufacturing facilities.

truck industry news

But only light trucks advance

Month's registrations best since December

Registrations of new trucks of all types were the highest in April since last December, and they topped the year-earlier count by more than 11 percent.

With light trucks leading the way, 243,798 units were registered during the month, 11.5 percent higher than last year's 218,651, according to R. L. Polk & Co. In December, there were 246,093 registrations.

Through April, new-truck tallies totaled 836,109, an increase of 11.1 percent over the 752,839 units registered in the corresponding period in 1982.

Light trucks were the only market segment to show an improvement in the first four months over a year ago. But there were gains this year in only two of the three weight classifications that make up the light-truck segment.

In the January-April period, light-truck registrations climbed to 786,754 units, an increase of 12.9 percent over the year-ago 696,949.

Group 1 tallies through April were 12.7 percent higher than last year, rising from 388,429 units in 1982 to 437,953. The Group 2 total of 346,648 units was up 14.6 percent, compared with 302,519 a year ago.

• After a relatively strong year in 1982, Group 3 trucks continued to weaken. Through April, the count was only 2,153 units, down 64.1 percent from last year's 6,001. And 1,075 of this year's four-month total were registered in April.

Big trucks still haven't shown any signs of a rebound in sales in spite of the economic recov-

GVW Table on Page 50

ery which many experts contend is well under way.

Registrations of medium trucks through April were off 3.3 percent, dropping from 12,-

Continued on Page 27, Col. 5

Big-truck tallies down for April, first four months

April registrations of new heavy trucks in the U. S. dropped 17.1 percent below the year-earlier mark, according to R. L. Polk & Co. statistics, and the four-month count was down 14.1 percent.

During the month, 10,816 Groups 7 and 8 trucks were registered, a decline of almost 2,250 units from last year's 13,040 tallies. Through April, the total was 37,337, more than 6,100 units fewer than the year-earlier 43,456.

There were declines for April in Group 7 registrations and in the four-month count for both groups making up the heavy-truck market segment. Group 8 was up sharply for the month.

Group 7 registrations for the month totaled 3,792 units, a de-

She charges 'cooperative research' is illegal

Claybrook files suit against NHTSA

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Joan Claybrook, former chief of NHTSA and now head of Ralph Nader's Public Citizen, has sued her former agency on grounds that NHTSA's "cooperative research" program is illegal.

Joining Public Citizen in the challenge are the Center for Auto Safety and the Environmental Policy Center. Claybrook headed NHTSA during the Carter Administration.

The suit, filed in Federal District Court in the District of Columbia, said the "secret" research activities are banned by the Federal Advisory Committee Act.

That law requires any such meetings to be open to the public, to have transcripts, to have reasonable advance notice of meetings listed in the Federal Register and, according to Claybrook, "more importantly, to have balanced representation in the membership of the committee advising the government."

She charged that the meetings NHTSA held with the auto industry foiled all those criteria.

"The integrity of the government regulatory agency is severely compromised when it engages in regular, secret meetings with the automotive industry to discuss and decide what research to pursue for regulatory decisions," Claybrook said.

She added that NHTSA has plenty of authority to gather data. "It need not violate the law, abuse its authority, and compromise its reputation to get cooperation from automotive companies," she said.

In May, 1981, Claybrook charged, NHTSA terminated several advisory committees that were in compliance with the law. Those committees, one on accident sampling and another on biomechanics, had been created by NHTSA to give data, advice and suggestions on NHTSA research activities.

In October, 1981, Claybrook said, NHTSA "secretly" initiated meetings with MVMA and its member companies, including General Motors, Ford Motor Co., Chrysler Corp., American Motors and Volkswagen of America, to talk about research done by the government and industry about safety standards and supporting data.

"During the past 11 months," Claybrook said, "various 'task groups' have conducted 25 meetings, but the public has not received advance notice of these meetings and has not been permitted to attend them."

She said that most of the meetings dealt with possible upgrading of Standard 214—side impact protection.

In July, 1982, Raymond A. Peck, who was then NHTSA administrator, terminated the proposed upgrading until the agency resolved issues about the upgrading.

Claybrook said in her lawsuit, "By this time, the 'cooperative research' program was already deeply enmeshed in discussions of test procedures for the proposed upgrading of the standard. The automotive companies want a static standard developed. Prior to July, 1982, the NHTSA had been developing a dynamic test standard."

The side impact study group, Claybrook added, has no representatives of consumer groups, insurance companies, academic research institutions, unions, or any other interested segment of society.

The suit asked the court to enjoin NHTSA from using the MVMA and the task groups as advisory committees unless NHTSA ensures that they comply with the Federal Advisory Committee Act.

Truck market in April reaches four-month high

Continued from Page 20

434 units last year to 12,018. There were 37,337 heavy-truck tallies, a decline of 14.1 percent from the year-earlier 43,456.

Group 4, the smallest of the eight, was the only big-truck classification to show a gain over last year. Through April, 91 of these vehicles had been registered, compared with only four units in 1982.

The Group 5 count was off 53.1 percent to 182 tallies, compared with 388 a year ago. In Group 6, there were 11,745 tallies through April, a decrease of 2.5 percent from last year's 12,042 units.

• Group 7 was down 25.8 percent in the January-April period, from 19,969 units a year ago to 14,817. There were 22,520 Group 8 registrations this year, a decline of 4.1 percent from the previous year's 23,487 units.

Ford increased its lead over Chevrolet in April by more than 3,000 units, and its four-month total of 266,289 tallies accounted for 31.85 percent of the industry total.

It was an improvement of 3.22 percentage points over last year, when No. 2 Ford's four-month count of 215,522 tallies took 28.63 percent of the total.

Pennsylvania dealers elect Hicks president

HARRISBURG, Pa.—Kermit G. Hicks, Hicks Chevrolet, Inc., Greencastle, was elected president of the board of directors of the Pennsylvania Automotive Assn. during its 63rd annual convention.

Other officers elected were: W. John Daub, Brown-Daub, Inc., Easton, vice president; James L. Royer, Royer Buick, Harrisburg, treasurer, and Ralph H. Evans, Ralph's Service Center, Mansfield, secretary.

18 supplier executives top GM chairman

Auto-pay analysis upsets many 'facts'

Continued from Page 1

chose not to exercise their options last year.

With option plan revenue and some minor additions to income in the form of savings plans and unused vacations, the rankings of the top officials of the Big 4 changed dramatically.

The chairman of mighty GM made about a third of what Iacocca, head of the No. 3 auto maker, did.

Ford's two top men probably topped GM's Smith, too—"probably" because the income figures include $712,492 worth of stock-option income for Caldwell and $565,333 for President Donald E. Petersen, portions of which may have actually been realized in 1978 or 1979.

Stock prices were high then, too, encouraging executives to exercise their stock options. Because of a Securities and Exchange Commission rule, Ford stock-option figures in its most recent proxy statement covered a five-year period.

If that weren't enough for GM's Smith, one look at the list of Japanese auto executives' salaries will show him he ranks below the presidents and chairmen of Toyota and Nissan — companies with sales of $16 billion and $15 billion, respectively. They are between Ford and Chrysler in size, with about a fourth the sales of GM.

Then again, maybe Smith has the last laugh: The Japanese equivalent of the SEC requires the country's executives to include even what would be private incomes in the U. S.—anything from dividends from unrelated companies to the sale of their own homes—in public disclosure statements.

U. S. auto executives must make public only the income related to their auto jobs. Only Roger B. and Mrs. Smith know his portfolio.

Clearly, some Japanese auto makers pay their executives far less than would be acceptable in the U. S. But the presidents of similarly sized Honda and AMC (both with sales in the $3 billion range) paid their presidents similar sums in 1982.

Unlike the U. S., Japanese chairmen don't always make more than the company president.

In the case of Toyota, President Shoichiro Toyoda is the grandson of the company founder, and his stock holdings of 18 million shares are probably the reason his income exceeds that of Chairman Eiji Toyoda, who holds 4 million shares.

Contributing to this report were Miles Moore, in Washington; John Hartley, in Japan, and Kathleen Hamilton, in Detroit. The article was written by Hamilton.

REPORTED INCOME OF BIG 4 EXECUTIVES

Rank	Executive	Position & Company	Income[1]
1	Lee A. Iacocca	Chairman, Chrysler Corp.	$1,575,176
2	Philip Caldwell	Chairman, Ford Motor Co.	1,158,820[2]
3	Donald E. Petersen	President, Ford Motor Co.	565,333[2]
4	Roger B. Smith	Chairman, General Motors	565,134
5	F. James McDonald	President, General Motors	498,184
6	W. Paul Tippett	Chairman, American Motors	376,536
7	Gerald Greenwald	Vice Chairman, Chrysler Corp.	358,952
8	Jose Dedeurwaerder	President, American Motors	251,325

Notes: 1—Figures include automotive-related income during 1982 as reported in proxy statements. Salaries, directors fees, benefits and income from stock options included, but any bonus paymenis held over from previous years are not included. Ford and Chrysler executives exercised stock options, and part of that income may have been realized early in 1983. GM figures include savings plan remuneration. 2—Includes $712,492 in value of stock options exercised by Caldwell and $565,333 by Petersen; some portion may have been realized in 1978 or 1979.

INCOMES OF JAPANESE AUTO EXECUTIVES

Rank	Executive	Position & Company	Income
1	Shoichiro Toyoda	President, Toyota Motor Corp.	$1,300,000
2	Eiji Toyoda	Chairman, Toyota Motor Corp.	1,100,000
3	Katsuji Kawamata	Chairman, Nissan Motor Co.	820,000
4	Takashi Ishihara	President, Nissan Motor Co.	510,000
5	Toshio Okamoto	President, Isuzu Motors	250,000
6	Kiyoshi Kawashima	President, Honda Motor Co.	240,000
7	Osamu Suzuki	President, Suzuki Motor Co.	220,000
8	Jitsujiro Suzuki	Chairman, Suzuki Motor Co.	190,000
9	Masaji Iwasawa	Chairman, Toyo Kogyo Co.	172,000
10	Sakae Ohara	Chairman, Daihatsu Motor Co.	170,000
11	Hideo Sugiura	Chairman, Honda Motor Co.	166,000
12	Yoshiki Yamazami	President, Toyo Kogyo Co.	165,000
13	Tomonaru Eguchi	President, Daihatsu Motor Co.	138,000

Note: Figures are for total income in 1982, including salaries, dividends and investments not necessarily related to the auto industry. Yen converted at 235 per dollar.

Governor signs lemon law in New Jersey

TRENTON, N. J. — The New Jersey lemon law went into effect last week after Gov. Thomas Kean signed legislation passed by the legislature several months ago.

The law, similar to those being passed in other state legislatures, provides that consumers would be able to have the purchase price refunded, after use allowances, or a defective vehicle replaced after following specified procedures.

Under this law, consumers can move for either refund or replacement if there have been four unsuccessful attempts to repair the same defect, or the car has been out of use for 30 business days.

The New Jersey law defines a defect as one which impairs the use, value or safety of the vehicle.

It also specifies a consumer must report the defects within the warranty period or one year from the date of delivery.

The law took effect on June 20 and covers all cars purchased on or before that date.

Within the context of this law, the consumer must go through the arbitration procedures established by the manufacturer. If not satisfied, the consumer can then take action in court.

Robert May, staff counsel for the New Jersey Automobile Dealers Assn., said the association did not oppose the legislation and the law puts the responsibility on the maker.

In the past, he said, the manufacturer could claim that the defect was due to improper repairs by the dealers, but under the present law, once the dealer calls the manufacturer's representative in on the repair, it becomes the manufacturer's responsibility.

He said that under this law, the consumer, if not satisfied, still has to go through court proceedings.

Court victory hailed as landmark

Safety Center obtains smog-conspiracy data

WASHINGTON.—A court victory by the Center for Auto Safety in obtaining documents shared by the government and the domestic auto industry in negotiating an end to the 1969 "smog conspiracy" consent decree is being hailed as a "landmark" because it has wide application to future antitrust settlements.

But the Justice Department has 30 days in which to consider appealing the decision of U. S. District Judge Thomas F. Hogan to the Federal Circuit Court for the District of Columbia and in the meantime, it may seek a protective order. But at present, the documents in question—some 400 pages—are not available.

The suit brought by the Center for Auto Safety involved the Freedom of Information Act and access to documents used in the Reagan Administration's decision to relax the consent decree.

The decree ended a lengthy investigation and a civil suit charging General Motors, Ford Motor Co., Chrysler Corp. and American Motors and their association — then known as the Automobile Manufacturer Assn. and now as MVMA—with conspiracy to delay the installation of air pollution control devices on new cars sold in California.

Under the Carter Administration, the Justice Department had favored extension of the 10-year consent decree and it is speculated that some documents discuss the change in the government's position.

• Judge Hogan's decision held that documents that the government has shared with the auto companies and/or their association must be made public and so must those prepared by the companies and MVMA and transmitted to the Justice Department.

Although some of the documents may have started as internal ones and hence exempt from public disclosure under the FOIA, they lost that status when they were shared with "outsiders" like the defendant auto companies.

Said Judge Hogan: "By sharing the Department of Justice's 'mental impressions' and once 'tentative opinions' with their adversaries in litigation, documents which may have at one time fallen within the deliberative process privilege lose their predecisional character and become final views of the agency. Thus, they cannot qualify for permanent protection."

The court further held the documents in question dealt not with enforcement but with modification of the decree.

While the court was sympathetic to the government's argument that releasing these documents might interfere with other consent decree negotiations, Judge Hogan nonetheless pointed out:

"Congress recognized that there may be situations where the efficiency of decision-making could be impaired, but it determined that the value of opening up and exposing agency action to public scrutiny would enhance the ultimate outcome and outweigh any harms."

Five decades

Edward A. Sahli Sr., left, owner of Sahli Motors, Inc., Beaver Falls, Pa., receives Chevrolet's 50-year dealer award plaque from David W. Watzlawick, assistant zone manager in Pittsburgh.

DELUXE QUALITY:
Triple chrome plated, double basket design, OEM type center cap with 64 to 72 individual spokes.

30 day open account with dealer's purchase order. Shipped F.O.B. Tempe, AZ.

Available in 13", 14" & 15". Minimum order: 5 SETS, in any size combination.

TO ORDER, CALL:

Big-truck tallies down for April, first four months

Continued from Page 20

cline of 46.3 percent from last year's 7,059. The Group 8 count, however, was up 17.4 percent, from 5,981 units a year ago to 7,024.

Four-month Group 7 tallies totaled 14,817 units, down 25.8 percent from the year-earlier 19,969. There were 22,520 Group 8 registrations through April, off 4.1 percent from last year's 23,487 units.

International, the leader this year in heavy-truck registrations, increased its share of total industry tallies by 3.40 percentage points through April.

Four-month International tallies accounted for 24.58 percent of the total with 9,178 registrations. A year ago at the same time, International was No. 2 and had 21.18 percent of the total with 9,203 tallies.

NEW TRUCK REGISTRATIONS BY MAKE AND GVW CLASS

FOUR MONTHS, 1983 VS. 1982★

VW returns, 11 plants work overtime

Week's car output rises to 153,259

By Mary Beth Mayer
Staff Writer

The return of one domestic car facility and overtime at 11 others boosted last week's U.S. car production 4.41 percent above the previous week's total.

Output last week was slated at 153,259 cars, up from the prior week's 146,785, and up 14.94 percent from the 133,344 built in the year-ago week.

Breakdown for the week by company was: General Motors, 59.88 percent; Ford Motor Co., 23.06 percent; Chrysler Corp., 11.78 percent; American Motors, 2.94 percent; Volkswagen of America, 1.53 percent, and Honda, 0.81 percent.

Year-to-date, the makers have assembled 3,184,123 automobiles, a 23.09 percent gain from last year's 2,586,766.

Chrysler's St. Louis plant closed June 17 to prepare for the launch of the 1984 front-wheel-drive, two-door models, including the Chrysler Laser and Dodge Daytona. The facility is slated to return July 18.

Volkswagen's Westmoreland point returned after a week of downtime for inventory control.

Working Saturday (June 25) were GM's Doraville, Fairfax, Flint (G line), Lansing and Leeds plants. Fairfax and Leeds worked one shift, while the other three points worked two shifts.

Ford added daily and Saturday overtime at its Chicago, Lorain and St. Louis plants. Chrysler's Jefferson and Newark points logged daily and Saturday overtime, while its Belvidere facility worked daily overtime.

Car sales through the roof: Up 74 pct. in mid-June

Continued from Page 2

timated sales of 4,450, up 178.13 percent from the AUTOMOTIVE NEWS year-ago estimate of 1,600. Volkswagen of America was up 2.89 percent, to 2,245 from 2,182, and U.S.-built Honda Accord sales totaled 1,527 in their first calendar year on the market.

GM earned 59.20 percent of the market, up from 58.15 percent a year ago. Ford dropped to 24.10 percent from 26.13 percent. Chrysler cornered 12.70 percent compared with 12.51 percent a year earlier. AMC had 2.17 percent, up from 1.36 percent. VWoA picked up 1.09 percent, down from 1.85 percent, and Honda had 0.74 percent of this year's mid-June market.

Knockout sales performances by domestic makes included a 123.14-percent increase for Chevrolet, a 105.79-percent rise for Buick, a 95.06-percent gain for Dodge and a 90.20-percent boost for Chrysler. Also up were: Ford, up 60.38 percent; Mercury, up 66.29 percent; Plymouth, up 49.90 percent, and Lincoln, up 42.47 percent.

Cadillac sales were up 35.25 percent, Oldsmobile was up 42.67 percent, Pontiac was up 57.40 percent and VW was up 2.89 percent. Imperial sales dropped 38.78 percent and AMC (not including Alliance) was down 15.63 percent.

Year-to-date sales through June 20 totaled 3,082,509, up 11.09 percent from 2,774,837 last year.

Alabama dealer group elects Burke president

BIRMINGHAM, Ala. — Jim Burke, Jim Burke Buick, is the new president of the Birmingham Auto Dealers Assn.

Tony Serra, Serra Chevrolet-Datsun, was elected vice president, and Tom Williams, Tom Williams Buick, was named secretary-treasurer.

Schultz is 25

Eberle Schultz, left, owner of Redwood Motors, Eureka, Calif., receives a 25-year Volkswagen dealer plaque from T. Fred Wallace, VW's San Francisco regional manager.

Truck production climbs to 53,526, highest of year

With 11 plants working overtime, last week's domestic truck output was the highest of 1983.

The makers targeted 53,526 units, up 1.55 percent from 52,710 built the previous week. The former 1983 peak was 53,085 for the week ended June 11.

Last week's total was 4.11 percent above the 51,412 trucks assembled in the year-ago period.

Operating one shift Saturday (June 25) were General Motors' Detroit and Pontiac Plant 2 points. Working two shifts Saturday were GM's Flint, St. Louis and Pontiac Plants 5 and 6 plants.

Ford Motor Co.'s Kansas City, Norfolk, Michigan and Twin Cities facilities worked daily and Saturday overtime last week.

Chrysler Corp.'s Warren point worked daily overtime.

Canada builds 22,119 cars, off 6 pct. for week

Last week's Canadian auto production, scheduled at 22,119, fell 6.40 percent from the previous week's total of 23,631. Output also fell slightly from the 22,274 units built in the year-ago period.

So far this year, 515,499 cars have been completed, up 10.97 percent from 467,819 built in the comparable period last year.

Truck output, at 12,480, was down 2.09 percent from the previous week's 12,747. Last week's total was up 12 units from last year's 12,468.

Year-to-date, 266,251 trucks have been built, down 3.75 percent from 276,638 in the year-ago period.

AMC's Brampton plant closed for a summer break June 21 and is slated to reopen July 18.

International Harvester's Chatham and Vancouver facilities remained closed for model changeover. Operations there, idled May 23, are scheduled to resume July 25.

GM's strategy: To be the last big-car builder

DETROIT. — Being the last large-car manufacturer in the world has been a part of General Motors' strategy "for years and years," according to F. Alan Smith, executive vice president for finance.

Smith said that although his company turns out small cars at the government's insistence, many consumers still want larger cars.

Smith told the Detroit Auto Writers Group that "it used to be that people said General Motors had all this clout and they can force down the people's throats any kind of car they want to make."

He continued, "Well, I don't hear anybody saying that any more. It's certainly not true, because if it were true, we wouldn't have had all the problems the last couple of years."

Japanese quota to expire; local-content bid stronger

By John Hartley, Helen Kahn and Kathleen Hamilton

The Japanese and Canadian governments last week finally hammered out voluntary auto quotas for this year, but days later a Japanese government official promised auto executives in Japan that export quotas for both Canada and the U. S. won't be extended when they expire next March.

It is unclear whether this was posturing by Sosuke Uno, on the job only two weeks as head of the Ministry of International Trade and Industry (MITI), or an official government announcement.

In either case, Uno's statement in Tokyo clearly helped the UAW-backed local-content bills in the U. S. Congress at a time when support has been low.

A spokeswomen at the Japanese embassy in Washington characterized Uno's statement as a reaffirmation of the government's earlier stance on the issue.

But observers in Japan say that even if Uno is opposed to more restraint, it is likely that Japan will restrain its auto exports in some fashion if the U. S. applies pressure.

In Detroit, officials at General Motors, American Motors and the UAW indicated they believe the Japanese position may be more flexible than Uno's statement indicates.

• Uno's remarks came during an informal breakfast meeting with auto executives. Takashi Ishihara, head of Nissan and of the Japanese Automobile Manufacturers Assn., urged Uno to stand firm on the issue.

Uno also emphasized the need for Japan to increase its imports to offset its trade imbalance.

The U. S. State Department, the Japanese embassy in Washington and the Office of the U. S. Trade Representative all said there has been no official communique that would indicate the stance is official.

A spokesman for the Trade Representative's Office said it is too early to start talking to the Japanese about future quotas. The Reagan Administration has asked for a clarification.

The reaction from Michigan's legislators was predictably strong.

But Missouri Republican Senator John Danforth, who previously introduced quota legislation, said he does not believe Uno's remarks are the final word. There is still a good chance of a fourth year of quotas, based on talks he and other senators had last January with Prime Minister Nakasone, Danforth said.

• Rep. John Dingell, Michigan Democrat, and Rep. Richard Ottinger, New York Democrat, predicted the news will boost the chances of passing local-content legislation.

Senator Donald Riegle, Michigan Democrat, speaking in Detroit to the Michigan AFL-CIO convention, called Uno's position an "outrage" and said Japan has begun a trade war he likened to Pearl Harbor.

Riegle called for immediate action to limit "sharply and permanently" the number of Japanese cars and trucks imported into the U. S.

Riegle is the chief sponsor of the local-content bill in the Senate. Its companion was recently reported out of the House Energy and Commerce Committee.

Until Uno's statement, it had

GM hones new FWD line

General Motors will unveil its new N-body—also known as GM-20—line of front-wheel-drive cars for the '85 model year. GM-20 vehicles will not be much larger than current J-body models and will likely be powered by a 2.5-liter inline four-cylinder engine. A two-door will be the only model offered the first year by Buick, Oldsmobile and Pontiac (the Buick model is shown). Cadillac will join the program in '86, basing its Cimarron model on the four-door sedan body that will be added that year.

breaking news

Toyota to offer extended cab

LOS ANGELES.—Toyota Motor Sales, U.S.A., will offer an extended-cab version of its new truck when the revamped line is introduced this fall. The new truck will be offered in two wheelbases—108 and 122 inches and will retain the present 2.4-liter four-cylinder engine.

Renault Encore starts at $5,755; '84 Alliance up

SOUTHFIELD, Mich.—American Motors last week announced tentative '84 prices which show increases of $245 to $344 (3.8 to 4.9 percent) on Renault Alliance. AMC also placed tentative prices on its new Renault Encore hatchbacks which are $100 less than most corresponding '84 Alliances, $204 less on the base model.

Encore starts at $5,755 for the base three-door. The Encore S three-door is $6,365 and the S four-door is $6,615. In the Encore LS series, the three-door is $7,088 and the five-door is $7,338. The Encore S three-door is $7,547.

Alliance starts at $5,959 (up $264) for the base two-door.

Judge grants extension in DeLorean 'circus'

By Edward Lapham
Senior Editor

The DeLorean drama made news again last week when the U. S. Bankruptcy Court in Detroit gave John DeLorean until Oct. 3 to form a viable reorganization plan for his defunct DeLorean Motor Co.

Judge George Woods also granted a petition by the unsecured creditors committee of DMC to freeze the proceeds of a pending sale or another DeLorean-owned company, pending further examination.

The week's events, termed a "circus" by one attorney, included among other things a hearing on a DMC petition to remove one creditor from the committee, a courtroom discussion of whether a DMC bankruptcy lawyer had called DeLorean associate Roy Nesseth a "gangster" or merely said he was "difficult" to get along with, and disclosure by a local television station that the FBI is now investigating DeLorean for "bankruptcy fraud."

In granting DeLorean and Henri Foussard another 90 days to put together a viable reorganization plan, the court ordered a $100,000 good-faith deposit posted in March by an attorney representing the investor group held in escrow. The creditors committee had wanted the money forfeited to the estate, arguing the group had not acted in good faith nor presented a bona-fide reorganization plan.

Judge Woods said he would extend the exclusive rights of DeLorean to file a plan beyond Oct. 3 only if there was progress, good faith and the likelihood the plan being developed would eventually be confirmed. After that he said, "it's open season" for any other potential investor who might want to reorganize the company — or liquidation.

• In the hearing to freeze the proceeds of a pending sale of the Logan Mfg. Co. division of DeLorean Mfg., court-appointed examiner Yale Levin testified that "there is a reasonable possibility" that John DeLorean may have used part of the $17.65 million missing from the sports car company to acquire Logan from Thiokol Corp. in 1979. (See AUTOMOTIVE NEWS, March 28, 1983.)

Levin said his examination was not yet complete and he had not yet reached a firm conclusion.

Attorneys for the creditors committee produced documents which said DeLorean obtained a $9.0 million loan from Dutch commercial bank, Pierson, Heldring & Pierson, with "very favorable terms" which suggested it was collateralized by a compensating balance of funds removed from the car project.

Levin said the loan terms, a 4.5 percent, 10-year, one-payment note from the Pierson bank is the type of "super balloon loan frequently secured with cash, certificates of deposit" or other similar cash-like instruments.

DeLorean last week was close to selling Logan to LHIW, Inc., a Logan (Utah) company, for $12.5 million, including a $2.5 million payoff of an outstanding loan to Continental Illinois National Bank, $4.5 million in cash and $5.5 million in notes. The

Motors Holding 54 years old and going strong

A look at GM's most exclusive club

By John K. Teahen Jr.
Managing Editor

The entry fee is higher than it once was and the apprenticeship is longer than it used to be, but General Motors' most exclusive club is still going strong.

The club is 54 years old, and it has had only 3,200 members during its entire life. Never more than 400 or 450 at any one time, usually a lot fewer than that.

And it has had only three leaders since it was formed in 1929.

The "club" is Motors Holding Division, a unit of the Sales and Marketing Staff that finances newly appointed GM dealers. The "members" are the dealers it finances.

Motors Holding is GM's smallest division with only 130 employes. In addition to central office functions in Detroit, they staff 19 branch offices in the U. S. and three in Canada and three regional offices.

The division also has responsibility for Motors Holding operations in the United Kingdom and West Germany. There are four employes in Europe. And it has overview responsibility for similar activities in Australia and South Africa.

Major-domo of the Motors Holding realm is William Harvey III, a genial 58-year-old executive who has been with the division since 1948 and has been its general manager since 1959.

William Harvey III

His 24-year tenure as the boss is probably the longest in GM history for the head of one division.

Harvey has had only two predecessors at Motors Holding. Albert L. Deane ran things from

Chevy power for Ford replica

The Total Replica Roadster, built by Total Performance, Inc., Wallingford, Conn., is a replica of the 1930 Ford, complete with two-passenger rumble seat. The fiberglass-bodied car is powered by a Chevrolet V-8 engine. Price is $18,000.

Clenet 'angel' wins assets of firm in court

By Kathleen Hamilton
Financial Editor

A U. S. Bankruptcy Court ruling has given all the assets of California neoclassic-car maker Clenet Coachworks to the firm's financial partner who is now looking for a buyer.

Meanwhile, designer Alain Clenet is working with Cars and Concepts, Brighton, Mich., on several projects. He also is setting up production of wood instrument panels for the aftermarket and making plans to design another car with his name on it —this time a modern performance vehicle.

Bankruptcy Court Judge Calvin K. Ashland came down squarely in favor of S. Prestley Blake, the founder of the chain of Friendly Ice Cream Co. restaurants, who bankrolled Clenet. The ruling authorizes Blake to sell the company's assets to try to recoup some of the $2.6 million the court found due him.

Clenet Coachworks will be worth less than $1 million if sold as a going concern, according to the judge's findings. Blake said he hopes to sell it intact, not in pieces.

In addition, Blake owns the Goleta (Calif.) plant where the $85,000 luxury cars were built. When the plant opened several years ago, Clenet valued it at about $4 million.

• Blake said General Motors executives had considered it for a West Coast design studio, but have dismissed it as too expensive for their budget at this time. Several prospects a week have been touring the facility, he said.

After more than a year of dissension between Blake and Clenet, Clenet was evicted in August, 1982, for failing to pay rent, taxes and utilities. Three of the company's creditors, friendly to Alain Clenet, sued in an attempt to recover their losses by forcing the company into liquidation.

The most recent court ruling, however, upheld Blake's priorities over those of the unsecured suppliers.

Clenet said the judge's ruling favored Blake in part because some of the facts of the case weren't tried (a jury trial was waived) and because of an unprepared lawyer for the estate. Clenet himself was not represented by an attorney.

Two former Clenet employes, George Corsi and Michelle Curtis-Corsi, are marketing replacement parts for the Series I, II and III Clenets through Pacific Innovations (P.O. Box 2053, Goleta, Calif. 93118).

Directives issued on air bags, fuel economy, research

House approves funds for NHTSA

By Helen Kahn
Washington Bureau Staff

WASHINGTON. — Air-bag technology, reliability of driver-only and full-sized air bags plus air-bag repair and larger test fleets are among the specific spending programs earmarked by the House of Representatives as it provided funding for NHTSA for fiscal 1984.

The committee report accompanying the money bill also advocated expansion of the New Car Assessment Program by which cars can be compared for their capability of protecting occupants and in giving consumers information on bumper performance.

The House bill, which also increases spending for drunk-driving programs and for "buckle up" programs, now goes to the Senate Appropriations Committee for its consideration and changes. Eventually, the Senate will act and a conference committee will iron out differences.

House passage of the appropriations for fiscal 1984 for the Department of Transportation occurred before the recent U. S. Supreme Court decision remanding the rescission of the passive-restraint rule to NHTSA for further consideration — whether to find better reasons for cropping the standard or to modify it and readjust effective date or dates.

Most of the money which NHTSA gets goes to states for their highway safety programs. The explanation is that alcohol — involved in some 55 percent of all fatal crashes — is a leading cause of deaths and so are unused safety belts and child restraint systems whose use could prevent at least half the deaths and injuries in car and light-truck crashes.

But while traffic deaths have been falling, the House Appropriations Committee is "uncertain" about the role played by NHTSA programs and policies. And — in an apparent reference to claims of lower fatality figures because of less driving, especially by unemployed teenagers, and formerly high gasoline prices — the committee wants to know whether the trend will continue under improved economic conditions and stable fuel prices.

• The biggest part of NHTSA's $78 million budget — not including the big grants to states — is for research and analysis.

The House voted for a little more than $39.5 million on grounds it will develop new approaches for safety and fuel economy of vehicles via state highway programs and through standards, public information, voluntary programs with manufacturers, harmonization with national and international standards and regulatory reform.

But the committee was not satisfied with progress made either in fuel economy or safety. For example, it is concerned that General Motors, Ford Motor Co., Jaguar and Saab may not meet the 26.0 MPG standard for '83 models, but failed to mention that Volvo may be in the same boat.

In fact, said the committee, NHTSA has "systematically dismantled its capability to deal with fuel-economy issues," even though the committee believes fuel economy will remain a "significant" issue.

To improve that capability, the House bill gives $500,000 more than NHTSA requested and directed the Cambridge (Mass.) Transportation Systems Center to use it.

In addition, the committee added $800,000 for crashworthiness research, of which $550,000 is to be used for biomechanics research.

But the committee approved another $250,000 to be used "to further the investigation of vehicle technological improvements to air-bag systems which have the potential of reducing installation and repair costs."

The full Reagan budget request of $1 million to complete the $2.5 million project to install driver-only air bags in 5,000 1985 models bought by the General Services Administration was also voted.

Money is already going to Arizona for its police car fleet, but the committee said a "substantially larger test fleet" is needed.

NHTSA was urged to intensify efforts to persuade larger fleet buyers to purchase air-bagged vehicles to set up a "sta-

U. S. judge tells Toyota to provide price data

LOS ANGELES. — A U. S. District judge has ordered Toyota Motor Sales, U.S.A. (TMS/USA) to turn over to the IRS cost information on cars sold by its parent, Toyota Motor Corp., to dealers in Japan.

Judge Cynthia Holcomb Hall ordered the Toyota's U. S. subsidiary to provide the data, which the IRS says it needs to establish the transfer price or price paid by TMS/USA for the Toyotas sold in this country between 1975 and 1978. The IRS is questioning TMS/USA's tax liability for that period.

Attorneys for Toyota Motor Corp. argued in an earlier court appearance that the model-by-model breakdown requested by the IRS is unavailable because cost data on cars sold in the Japanese home market is kept in a different form than that of cars sold in the U. S.

Judge Hall, however, ordered Toyota to comply with the request that asks the company "to provide unit selling prices, including the price of spare tires and tools, to Japanese dealers for each passenger-car model sold during each of the fiscal years 1976, 1977 and 1978."

Judge Hall denied a government request that TMS/USA provide cost data in 13 other categories, saying that information has already been provided by the company or no longer exists.

She also rejected a request for copies of all communication between TMS/USA and its parent as too broad.

ERF inks pact to build Hino trucks in UK

By Richard Feast
European Editor

SANDBACH, England.—ERF, the UK's only independent heavy-truck maker, has reached an agreement with Hino, of Japan, to begin production of medium-weight Hino trucks next year.

The agreement was reached last week by Peter Foden, chairman of ERF, and Masashi Arakawa, president of Hino. Hino is part of the Toyota Group.

The agreement involves no financial stake by Hino in ERF, and reports of a $45 million investment by the Japanese company have been denied by ERF.

ERF will be responsible for manufacturing and marketing a range of four-wheeled rigids in the 12-to-15-ton category. The vehicles will be produced in the company's Sandbach works in the northwest of England, using six-cylinder Perkins diesel engines.

They will be sold as ERFs. When production begins in 1984, ERF said, the local content will amount to 60 percent, and will rise to 80 percent as the program develops.

The deal also involves the exchange of technical information, including ERF's unique hot-pressed plastic cab components.

Critically for the UK maker, it gives it a contender in a weight category which it has so far avoided. ERF has concentrated on the heavy end of the market, selling the majority of its output in the UK but with a limited number of exports to the Middle East.

Last year, ERF manufactured just over 1,700 units, compared with almost 61,500 by Hino.

Hino has international ambitions. It is planning to begin a U. S. operation in 1984 (AUTOMOTIVE NEWS, May 16). In Europe, it has concentrated its assembly facilities in countries which have no domestic industry, such as Ireland, Portugal and Greece.

Assembling turbos

Rolling off the line at Garrett AiResearch's assembly plant in Torrance, Calif., the Model TO3 turbochargers are assembled by Luis E. Labori prior to installation in Ford's new 2.3-liter EFI (Electronic Fuel Injection) turbocharged engine.

10,000 Corvettes being recalled for brake-bolt fix

WARREN, Mich. — Chevrolet has recalled all 1984 Corvettes built before June 16 so that bolts holding front-wheel brake assemblies in place can be changed.

Chevrolet said a quantity of incorrectly coated bolts had been used to fasten brake calipers to steering knuckles. If these bolts work loose, they could cause the caliper to interfere with the operation of the wheel and prevent the wheel from rotating.

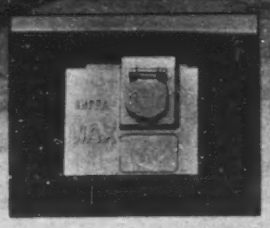
Since the incorrect bolts were used at random and are virtually indistinguishable from the correct bolts, both bolts on both front-brake assemblies of some 10,000 new Corvettes will be changed.

There have been no reported accidents due to the incorrect bolts.

Your sales staff should be on the lot selling, not in back searching for keys.

By using the Supra Max® key box with the patented Title Key® each of your sales staff has lot-wide access to all vehicles.

The results? Less wasted time searching for keys and more productive time spent with the customer.



Rugged Zamac chrome finished case, heavy duty steel hinge pin and large key storage capacity help make the Supra Max one of your best selling tools.

So, if you want your sales staff off the hook and back on the lot selling, call us toll free at 1-800-547-0252. (In Oregon, 581-9101.)

Import penetration rises for month

By Jenny L. King
Staff Writer

New imported-car registrations accounted for a greater share of the total market this April than they did a year ago, but they fell short of the record 30.33 percent posted in 1981. Year-to-date penetration was up from 1982, to 30.54 percent from 29.09 percent.

According to figures compiled by R. L. Polk & Co., April registrations for imports numbered 208,211, up 11.78 percent from 186,261 a year earlier. They represented 28.58 percent of the market compared with 27.71 percent in 1982. Record penetration for the month was 30.33 percent notched in 1981.

In the first four months of 1983, 799,272 new imported cars were recorded, up 16.76 percent from 684,534 in 1982. They represented 30.54 percent of the market compared with 29.09 percent in 1982.

U. S.-built Volkswagen Rabbits, Honda Accords and Renault Alliances are counted as imports by Polk and they constitute a new category for country of origin: United States.

Again in April, as it had in March, Nissan edged out Toyota to become the top-registered import and was up 1.62 percentage points, to 21.07 percent from 19.45 percent last year. Second-place Toyota dropped 3.33 percentage points, to 20.51 percent from 23.84 percent.

Honda remained third, but dipped 1.81 percentage points, to 14.02 percent from 15.83 percent. Mazda took fourth place from Volkswagen and was up 0.51 percent. Subaru was fifth, followed by Alliance and then VW. Eighth-place Volvo was up 0.25 percentage points, Mercedes was ninth and BMW tenth.

Those top 10 imports had 87.94 percent of the import total, leaving the remaining 12.06 percent to "others." A year earlier, others claimed 9.94 percent and the top 10 had 90.06 percent.

During the first four months, Toyota slipped 1.99 percentage points from last year, Nissan was up 1.96 points and Honda fell 2.55 points. Mazda gained 0.25 percentage points, Subaru was off 0.84 points, VW was down 1.53 points and Volvo climbed 0.16 percentage points.

Mercedes was off 0.25 percentage points from 1982, BMW was up 0.02 percentage points and others were up 1.22 percentage points, to 11.29 percent from 10.07 percent.

The Japanese share of the import market slipped to 73.02 percent from 76.85 percent in April. German-built cars claimed 9.36 percent this year, versus 10.07 percent in 1982. U. S.-built imports accounted for 9.44 percent compared with 4.88 percent, and cars from Sweden had 4.92 percent, up from 4.32 percent.

• Imports from the various countries were as follows:

	April, 1983	April, 1982
Japan	152,026	143,141
West Germany	20,057	18,764
United States	19,645	9,093
Sweden	10,252	8,054
France	3,871	4,445
Great Britain	1,325	801
Italy	996	1,725
Ireland	39	238

Registrations by country of origin January through April, 1983 vs. 1981, were:

	4 mos., 1983	4 mos., 1982
Japan	589,894	530,447
West Germany	79,585	69,689
United States	73,340	32,293
Sweden	35,211	27,515
France	13,515	15,057
Great Britain	4,324	2,556
Italy	3,223	5,797
Ireland	180	1,180

New imported truck registrations rose 3.31 percent in April, to 36,677 from 35,503. The by-maker breakout was:

	April, 1983	April, 1982
Toyota	12,930	12,030
Nissan	9,893	8,269
Mazda	5,932	3,152
Dodge Ram 50	2,019	2,477
Others	5,903	9,575
Total	36,677	35,503

Year-to-date, imported trucks were up 1.77 percent, to 139,048 from 136,628. Totals were:

	4 mos., 1983	4 mos., 1982
Toyota	46,138	42,728
Nissan	35,204	30,313
Mazda	19,607	.....
Dodge Ram 50	8,254	12,035
Ford Courier	.....	12,183
Others	29,845	39,369
Total	139,048	136,628

NADA notes rise in dealers using Sales Trak plan

WASHINGTON. — The 1983 NADA Sales Trak dealer participation rate is running 30 percent higher than the 1982 rate, according to Steve Wancik, NADA Sales Trak manager.

Holding four workshop meetings in four cities per month, the Sales Trak program recently completed two workshop meeting series. Approximately 50 dealers not currently participating in the Sales Trak program attended each workshop.

"The May and June workshops were successful because dealers are beginning to see the light at the end of the tunnel. They are now prepared to involve themselves in ways to improve and exploit the upturning market," Wancik said.

Originated in 1975, the Sales Trak program is a management tool for control.

The four-step program consists of a Prospecting System, Floor Traffic Control, Prospect Follow-Up and Owner Follow-Up.

Ohio dealer group honors Kyger family

OXFORD, O. — During the Ohio Automobile Dealers Assn.'s 50th annual convention, George F. Kyger and Frank Kyger, of George F. Kyger & Sons (Chrysler-Plymouth-Dodge), were given the Half-Century Club Award.

This award is given to dealerships which have held a new-car or truck franchise continuously in the same family for 50 years.

On stopping-distance data

NHTSA willing to ease brake rule

WASHINGTON. –In response to a request from General Motors, NHTSA has tentatively decided that brake stopping distance need not be provided to car buyers at the time of delivery, but it should be made available to dealers and NHTSA so prospective buyers who wish to have the information may obtain it.

Using information provided by GM, NHTSA estimated that if the proposal is adopted, the auto industry would save more than $1 million a year. Closing date for comments is mid-August.

The consumer information for cars and motorcycles is obtained by the manufacturers when they test for compliance with Standard 105.

GM said the data is not really used by consumers; it does not provide a meaningful comparison among vehicles; it may be misleading, and disseminating it is an unnecessary economic burden on the maker.

GM provided a survey of 162 of its dealers. Of these, 140 said no consumer had ever asked for the information and the other 22 had received an average of five requests each. Moreover, said GM, because of the severity of the standard, most vehicles are going to read out as near the maximum allowable distance — so the information is not really useful to car buyers.

But because GM did petition, NHTSA made its own investigation and discovered that both Ford Motor Co. and Chrysler Corp. reported that all their domestic cars stopped at exactly the distance set by the standard, but GM reported that a typical domestic GM model needs 5 percent less distance in which to stop.

Said NHTSA, "Information like this could be useful to consumers."

In addition, NHTSA found wide variations in reported stopping distances — from 136.7 feet to 194 feet, a range of 30 percent. There was also "some significant variations in reported stopping distances" among comparable models.

So, even though there was the tight grouping around the maximum reported by GM, there were also noticeable differences for 1982 models.

NHTSA said it wants to know if there is a better way to ensure brake effectiveness for subsequent buyers. The current practice of using the owner's manual or using a separate pamphlet works only if that is passed along.

A better way might be to include it on a sticker permanently attached — inside the glove compartment or on the door post — and the agency would like to have comments on that suggestion and any others.

Providing dealers and NHTSA with the data—using an extrapolation of GM costs — means only 3 cents a car in an 8 million car year, NHTSA said.

New York dealers to build new quarters

NEW YORK. — The Greater New York Automobile Dealers Assn. has purchased property in College Point in Queens for a new headquarters building.

The building will be the Whitestone Expressway service road at 20th Ave., just off the Whitestone Bridge. Construction is scheduled to begin this fall and to be completed about a year later.

Rochester dealers elect officers

Officers of the Rochester (N. Y.) Auto Dealers Assn., are, from left: Edison Paxton, president; Michael Piehler, vice president; Arnold Brooker, treasurer; William Gordon, immediate past president, and Patrick Cortese, secretary.

2nd co-defendent in DeLorean case pleads guilty

LOS ANGELES.—Former automaker John Z. DeLorean will be facing cocaine-trafficking charges alone when his trial begins here Oct. 4, following a plea change by the second of his two co-defendants.

Stephen Lee Arrington, who was arrested with DeLorean and William M. Hetrick last October in a government sting operation, pleaded guilty to two cocaine charges June 24 and faces a maximum of 30 years in jail and $50,000 in fines.

Judge Robert M. Tagasuki set sentencing of Arrington for Aug. 25. Hetrick changed his plea from innocent to guilty on June 13. He is to be sentenced Oct. 31.

Arrington was arrested when he allegedly delivered 25 kilograms of cocaine to federal undercover agents. In return for his guilty plea, the government dropped a third drug-trafficking charge against Arrington.

Unlike Hetrick, who has agreed to testify against DeLorean and others in unrelated drug cases as part of his plea bargain, Arrington will not testify against DeLorean.

Larsen new president of Oregon dealers

PORTLAND, Ore. — Allan Larsen, Larsen Motor Co., McMinnville, has been elected president of the Oregon Automobile Dealers Assn.

Also elected were Ray Hayden, Hayden Motor Co., Newport, vice president; Bud Betz, Betz Chevrolet-Pontiac-Oldsmobile, Cottage Grove, secretary, and Buzz Braley, Braley & Graham Buick, Portland, treasurer.

DeLorean wins time to try to reorganize his auto firm

Continued from Page 1

closing was tentatively scheduled for July 1, which prompted the creditors committee to seek impressment of the proceeds.

Earlier, DeLorean was close to a $10 million sale to Austrian manufacturer, Steyr - Daimler - Puch AG, and also had negotiated with Canadian snowmobile maker Bombardier, Ltd., as well as a Logan management group.

• Howard Weitzman, one of DeLorean's attorneys in the federal drug-trafficking case in Los Angeles, appeared in Bankruptcy Court last week. He said there is "no hard evidence" linking the missing money to John DeLorean. He also argued that freezing the proceeds of the Logan sale might abort it by scaring off a lender.

After the ruling, Weitzman said a portion of the receipts would be used by DeLorean for his defense in Los Angeles and that "he wanted a portion of this to put back in the car company."

Weitzman said allegations that DeLorean had taken the missing money were "outrageous" and were designed to "divert attention from the misconduct" of the London-based receivers of the defunct Northern Ireland factory.

"Their primary goal seems to be to attack John DeLorean personally," he said.

The DMC effort to remove Audio Systems, Inc., from the creditors committee involves the ASI suit in U. S. District Court for the Southern District of New York.

In that suit, against John Z. DeLorean, Roy S. Nesseth, former DMC board member Cristina DeLorean, DeLorean Mfg. Co., Cristina Corp., and former DMC officials Thomas W. Kimmerly, James H. Season and George J. Hayward, ASI is seeking additional damages based on the Racketeer Influenced and Corrupt Organizations Act.

The $5 million ASI suit charges the defendants with various acts of fraud in their relationship with the supplier. The ASI suit charges racketeering in wire fraud, bankruptcy fraud, mail fraud and securities fraud.

In another separate action, attorneys for the bankrupt DMC filed suit in U. S. District Court in Detroit, seeking to recover damages from Consolidated International, Inc., which acquired the remaining stock of DMC cars late last year pursuant to an earlier loan agreement.

Rockwell heads group bidding for AM General

Continued from Page 2

working on its plan to buy AM General for about eight months and included as much of the division's top management as Securities and Exchange Commission rules allow, he said.

Both the Cyprus and Hyde-Murphy deals are leveraged buyouts, which would borrow against the assets of AM General to finance the purchase.

AMC announced in March it was willing to sell AM General as part of a financial restructuring to raise money for its future product lines. The announcement came the day after the government awarded AM General a contract for potentially $1.2 billion for its Hummer land vehicle.

• That contract could make AM General South Bend's first or second largest employer, banker Murphy said, and is the reason for the local support. His group plans to keep top management, sales and engineering operations in Detroit.

AM General would be the largest acquisition by Cyprus, which last week acquired a computer hardware company and another company that has developed a laser wastewater treatment system.

Rockwell and a group of investors acquired control of Cyprus in 1981 and moved it to Pittsburgh as a publicly traded closed-end investment company. It will become an operating company if the bid for AM General is successful.

Saab names Rossi

ORANGE, Conn. — Steven Rossi has been promoted to product development compliance manager for Saab-Scania of America. He previously was market adaption certification engineer.

6-month total is 3,293,508

1st-half auto production up 23 pct.

By Mary Beth Mayer
Staff Writer

U. S. car production for the first six months of this year is estimated at 3,293,508, leading the year-ago total of 2,660,041 by 23.81 percent.

Output last week was slated at 136,732, down 10.52 percent from 152,810 the previous week, but up 12.46 from 121,578 built in the year-ago period.

Breakdown for the week by company was: General Motors, 52.88 percent; Ford Motor Co., 23.19 percent; Chrysler Corp., 11.26 percent; Volkswagen of America, 1.72 percent, and Honda, 0.95 percent. American Motors did not produce any Renault Alliances last week.

AMC closed its Kenosha plant last Monday (June 27) to begin a summer vacation, and will reopen it July 12. Ford's Edison (N. J.) plant closed last week to begin a three-week vacation.

Also closed was Chrysler's St. Louis plant, which is preparing for the launch of the 1984 front-wheel-drive, two-door models, including the Chrysler Laser and Dodge Daytona. The facility is slated to return July 18.

Chrysler's Belvidere, Jefferson and Newark points worked two daily nine-hour shifts last week.

Ford plants working daily overtime were: Chicago, St. Louis and Wixom. All Ford plants begin a two-week vacation today (July 4).

None of the auto makers posted Saturday overtime because of the holiday weekend.

All U. S. car facilities will be idle today in observance of Independence Day.

Labor group cheers Iacocca as he tees off on Reagan

DETROIT. — Labor and management in the U. S. have long been in an adversarial position, but this was certainly not the case last week when Chrysler Chairman Lee Iacocca spoke before the Michigan AFL-CIO convention.

Delegates hung on Iacocca's every word and interrupted him repeatedly with cheers and applause as he blasted the Reagan Administration's economic policies, particularly its approach to trade with Japan.

Iacocca brought the delegates to their feet when he defined "trickle-down economics" as meaning that "when tax laws are changed to benefit David Rockefeller, eventually some of it trickles down to Jay Rockefeller."

He said that while European countries are limiting Japanese car and truck imports, the U. S. government paid no attention when Japan took 22 percent of the U. S. car market.

The U. S. trade deficit with Japan, Iacocca said, is $13 billion on vehicles alone, which he said translates into a loss in the U. S. of 600,000 to 700,000 jobs.

"Those jobs were lost to a country that simply does not play fair when it comes to world trade," he said.

• Iacocca was the first top management official to speak at a Michigan AFL-CIO convention in the organization's 25-year history. His comments had even more impact because he did not speak in the usual labor rhetoric of "sock it to the boss." After all, for many union members, he is the boss.

Iacocca said Washington policies encourage businesses to use their money for acquiring other companies or to simply put it in the money markets, rather than invest in capital equipment which would create jobs and modernize our industries.

He again urged an increase in the gasoline tax, which he said would encourage conservation and would also raise money which could be used to repair roads, bridges, water and sewer systems and dams.

"My advice right now is don't build a house downstream," he said.

And the delegates roared their approval when, after reviewing U. S. trade policies, Iacocca asked. "When is this government going to wake up?"

Iacocca was followed by a more traditional labor convention speaker, Michigan Democratic Senator Carl Levin. Levin also attacked the Reagan Administration and the delegates liked what he said.

But he had clearly been upstaged by management.

New Hampshire adopts child-restraint law

CONCORD, N. H. — A new child-restraint law is in effect for New Hampshire, requiring children up to age five to be restrained either in car seats or seat belts.

Violation means a $30 fine, which can be waived by a judge who is shown proof that the offender has purchased a seat and plans immediate use.

Truck output up nearly 10 pct. for first half

Domestic truck production for the first half of 1983 is estimated at 1,141,713, topping the year-ago output of 1,039,218 by 9.86 percent.

Last week, the truck makers scheduled 46,593 units, down 13.53 percent from 53,883 built the previous week. The total was also down slightly from the 46,834 units assembled in the year-ago period.

American Motors' Toledo plant closed last Monday (June 27) to begin a summer vacation and is slated to return July 11.

Chrysler Corp.'s Warren point worked daily overtime last week.

Overtime was also scheduled at Ford Motor Co.'s Kansas City, Lorain, Louisville, Twin Cities and Wayne points. All Ford plants begin a two-week vacation today (July 4).

All U. S. truck facilities will be idle today in observance of Independence Day.

Canadian holiday cuts production of cars, trucks

Holiday downtime last Friday (July 1) dragged last week's Canadian auto production down 19.39 percent from the previous week's total, but output for the year-to-date remained above that of the comparable 1982 period.

The auto makers scheduled 17,773 units during four days of production last week, down from 22,048 units finished during five days the previous week but up 43.56 percent from 12,380 in the comparable week last year.

So far this year, the car manufacturers have finished 533,201 units, a 10.63 percent gain from 481,947 built in the year-ago period.

Last week's truck production, also for four days, was estimated at 9,013 units, down 25.87 percent from the previous week's 12,158. Output jumped 28.24 percent from 7,028 units built the same week last year.

Year-to-date, the truck makers have completed 274,942 units, down 3.51 percent from 284,948 built in the same 1982 period.

AMC's Brampton plant remained closed last week for a month-long summer break and is slated to reopen July 18.

Chrysler Canada's Windsor car plant is being retooled for assembly of the 1984 front-drive T-115 van/wagons scheduled to begin in October.

International Harvester's Chatham and Vancouver facilities remained closed for model changeover. Operations there, idled May 23, are scheduled to resume July 25.

Newest Honda

Sporty CR-X to bow in Japan

Honda Motor Co. has announced a newly developed front-wheel-drive, 2+2 sports car, the Honda Ballade Sports CR-X. Power is by a light, compact, 12-valve cross-flow engine available as a 1.5 or 1.3-liter. Plastics and light metals are used extensively in the new car.

July 1 new-car inventory unchanged at 47-day level

By Richard A. Wright
Assistant Managing Editor

The domestic auto makers built up their inventories of new cars during June, but sales picked up a bit, too, and they opened July with a 47-day supply, unchanged from a month earlier.

The July 1 domestic new-car inventory totaled 1,209,000, up from 1,194,510 a month earlier.

Compared with a year ago, however, the new-car stock has done a complete turnaround. Last year, the industry had 1,364,214 new cars on hand July 1, a 78½-day supply, quite hefty for that time of year.

This year's July 1 stockpile is in much better condition, however, with good balance between the size classes and very few low-volume nameplates in heavy supply.

The only problems were a few lines with inventories low enough to hamper sales, such as the hot-selling '84 Corvette.

• General Motors accounted for most of the inventory gain during June. American Motors also boosted its stockpile slightly, while the other corporate makers entered July with smaller unit counts than they had a month earlier.

GM opened July with a 45-day supply, up from 42 days a month earlier. GM lines in short supply included Corvette, Cutlass Supreme, Olds 88 and 98 and the J-cars, particularly Cavalier.

Ford Motor Co. had a 48-day supply July 1, down from 57 days on June 1. Ford's top-selling Escort entered the month with a meager 27-day supply.

Chrysler Corp. had a 56-day stockpile July 1, up from 53½ days a month earlier, while AMC boosted its slender 45-day supply a month ago to a healthier 55-day stock. Volkswagen of America trimmed its stock of U. S.-built Rabbits to 47 days from 63 days a month earlier.

The July 1 domestic new-car inventory was divided this way: GM, 55.09 percent; Ford Motor Co., 25.72 percent; Chrysler Corp., 14.84 percent; AMC, 2.86 percent, and VWoA, 1.49 percent.

A month earlier, the domestic inventory was divided as follows: GM, 53.93 percent; Ford

Table on Page 69.

Motor Co., 26.38 percent; Chrysler Corp., 15.16 percent; AMC, 2.74 percent, and VWoA, 1.79 percent.

• By size class, the stock of subcompacts, compacts and luxury cars dipped a bit from the preceding month, while intermediates and standards were up. But all movements were small and the inventory remained in remarkably good balance.

The domestic makers had a 44-day supply of subcompacts, a 45-day stock of compacts and a 48-day supply of luxury cars, compared with the month-ago levels of 46, 46 and 49½ days, respectively.

The intermediate stock grew to 52 days from 50 a month earlier, and standards were in 45-

Plastic used for bumpers, body panels

Honda widens sporty coupe market

By John Hartley
Staff Correspondent

TOKYO. — Honda is set to open up the market for small sporty coupes with the completely new Ballade Sports CR-X coupe.

A tiny car, it fits between the City and Civic in size, although the style is sporty and completely different from the hatchbacks.

Exports of the CR-X and City to Europe will begin this fall, and it is possible that the CR-X will be exported to the U. S. However, that depends on the quota situation and market research.

Only 145 inches long, the CR-X has an 87-inch wheelbase and curvy fastback styling. Since the driver and passenger sit very low, the car is only 51 inches high.

There is a deep air dam combined with the bumper at the front, while the headlamps are partially covered by small flaps, as on the Isuzu Impulse. The car has a high waistline with the fastback roof running into the vertical tail panel. Honda claims a drag coefficient of 0.33 and says that lift is also low.

But it is not just in the looks that the body is new. Honda has developed some new plastic panels for the front fenders, the front panel above the grille and also as cladding panels for the bottom halves of the doors.

These panels are injection molded from a new mixture of polycarbonate and ABS developed by Honda and are much cheaper to produce than the panels being used by General Motors for the new Pontiac Fiero, according to Honda materials engineer Yoshitsugu Fujimori.

• In addition, the bumpers are molded from polypropylene, and like the other plastic panels are painted to match the body. Fujimori conceded that there are some difficulties with paint matching, so at present the CR-X is limited to three strong colors — white, blue and red.

Beneath the skin, there are more novelties. First, there are new 1.3- and 1.6-liter engines with aluminum cylinder blocks and heads.

Incorporated in the cylinder heads are Honda's novel three-valve plus CVCC layout first

With World Congress and World Expo

Automotive News Week under way

Automotive News Week in Detroit is in full swing today (July 11), as the second annual Automotive News World Expo brings the world's automotive marketplace to Cobo Hall.

The World Expo, a four-day international buy/sell trade fair, features all aspects of the automotive original equipment business under one roof and is expected to attract thousands of OEM executives.

Automotive News Week got under way Sunday with the opening of the eighth annual Automotive News World Congress at the Westin Hotel in Detroit's Renaissance Center. Keynote speaker was Philip Caldwell, Ford Motor Co. chairman, who discussed the state of the industry.

World Congress registrants, professionals in the auto industry and related businesses, attend 3½ days of seminar sessions dealing with the future of the industry.

World Expo and World Congress participants will gather at the Westin Hotel's Renaissance Ballroom for a Tuesday Evening Gala. After a cocktail reception and dinner, Gala attendees will hear presentations by Ferdinand Beickler, Adam Opel AG managing director, and John Telnack, chief design executive, North American Design, Ford Motor Co.

Beickler's topic will be "Facing the Future in Europe," while Telnack will look at "Automotive Design — Change vs. Progress."

The price for those who are not World Congress registrants is $33, which includes cocktails at 5:30, dinner at 6:30 and the program, which begins at 7:45. For information, call the Automotive News World Congress registration desk at the hotel at (313) 393-4161.

While the Automotive News World Congress is an international forum for analysis of world automotive markets and trends by 36 faculty members who are movers and shakers in the industry and related fields, Automotive News World Expo unites buyers and sellers from around the world.

Cobo Hall, site of the World Expo, has been designated an international free-trade zone during the July 11-14 show dates, allowing overseas exhibitors to ship their products duty-free.

Lighter and lower

High-tech Mark VII

Ford Motor Co.'s 1984 Mark VII is 350 pounds lighter, 1.5 inches lower and 13 inches shorter than the Mark VI. The '84 model has a drag coefficient of 0.38, flush-mounted integrated headlamps and an electronic three-way air-spring suspension system that adjusts for passengers and luggage. Story and another picture are on Page 4.

V-6 to power new Nissan Z-car

TOKYO. — The latest version of Nissan's 280-ZX sport coupe, which goes into production this fall, will be powered by a new 3-liter V-6 engine which has been introduced in the Cedric/Gloria models. The new Z-car is said to be shorter and lighter than the present model. Styling features are expected to include gull-wing doors and reclining headlamps, similar to those on the Porsche 928.

Japanese market holds steady

TOKYO.—New-car registrations in Japan numbered 196,223 in May, compared with 198,006 a year earlier, according

Will Loan Board exercise warrants?

Decision near on Chrysler stock

By Kathleen Hamilton
Financial Editor

The Chrysler Loan Guarantee Board is believed to be near a decision on whether it will exercise its warrants for Chrysler Corp. stock.

It if does so, the government could make more than $250 million at current stock prices.

The government was granted the warrants for 14.4 million shares of Chrysler common stock at $13 per share as part of the Chrysler bailout package. At the time, Chrysler stock was selling at less than $7. Last week, the company's common stock was trading above $31.

Senator John H. Chaffee, Rhode Island Republican, last week sent letters to the three voting members of the Loan Board, urging them to take advantage of the stock's high price and to divest the government of its interest in Chrysler Corp.

Chrysler wants the warrants back. Chairman Lee Iacocca has called the government's potential profits usurious. Chaffee sees the sum as a "profit to reward the taxpayers" who took "the real risk" in bailing out Chrysler.

Chrysler noted it has paid the government a one-percent annual fee on the loans it guaranteed.

That amounted to $12 million in 1982 when Chrysler had $1.2 billion worth of guaranteed loans outstanding. Chrysler paid off a third of its loans this June, so the fee to the government will be about $10 million this year — less if it pays off more of the debt.

• If the Loan Board decides to take advantage of the Chrysler warrants, it could sell them directly or it could appropriate $187 million to buy the 14.4 million shares. If the latter course is chosen, Congress will have to approve the appropriation.

The Loan Board also could decide to sell or exercise only a portion of the warrants, or it could delay a decision. The warrants are good through 1990.

If the government does exercise its warrants, it would own about 9 percent of Chrysler; there are now about 142 million common shares outstanding. The move would dilute earnings per share by about 10 percent but probably would have little effect on stock prices.

That is because analysts are already looking at fully diluted earnings when they do their earnings forecasts and estimates, according to Joseph Phillippi, vice president of research at Dean Witter Reynolds, Inc. The real question for Chrysler investors is whether earnings and stock prices will peak in 1984 or 1985, he said.

There is further evidence that stock prices would be relatively unaffected by an exercise of the warrants: When Chrysler sold 26 million shares in late March, trading prices fell by only 63 cents.

Phillippi actually sees the possibility of Chrysler stock prices rising if the warrants are exercised: The move would give Chrysler an extra $187 million in immediate cash, he pointed out.

The three voting members of the Loan Board are Treasury Secretary Donald Regan, Federal Reserve Board Chairman Paul Volcker and Comptroller of the Currency Charles Bowsher.

Signs point to action on Clean Air measure

WASHINGTON.—Signals are now coming from Congress that the Clean Air Act may be reauthorized and amended during this Congress and possibly even during this session.

EPA's first head, William D. Ruckelshaus, is once again in charge and the agency has its credibility back. The major stumbling block of last year — acid rain — will now be addressed, because the National Academy of Science has identified emissions from Midwest smokestacks as the major culprit.

While the solution may involve complex balancing of regional and Canadian interests, a solution appears possible without disastrous fights over cause and effect.

This means that unsettled differences over levels of car and truck emissions also will be addressed.

• Last week, California Rep. Henry Waxman, chairman of the House Health subcommittee, introduced his own approach and Vermont Senator Robert Stafford immediately praised the bill. The Waxman bill not only addresses sulfur dioxide in utilities but oxides of nitrogen in power plants and in light and heavy-duty trucks.

Emissions reduction in NOx would be 1.5 million from plants and another 2-3 million from trucks. Thus, the Waxman "acid rain" bill has become the vehicle for all changes in the law.

In the Waxman bill, light trucks weighing 6,000 pounds GVW or less would have a NOx standard of 1.2 grams per mile; those between 6,000 GVW and 8,500 GVW would have 1.7 gpm, and those over 8,500 GVW would have 4.0 per brakehorsepower/hour.

Although the car companies have favored 1.5 NOx for cars and light trucks, the Waxman proposals are not dissimilar to those proposed by EPA in an advanced notice but not expected to emerge until late 1984. (HD truck emission standards for hydrocarbons and carbon monoxide may come from EPA, possibly as early as this September.)

So far, Michigan's John Dingell, who chairs the full committee of which the Waxman subcommittee is but a part, has made no move. Neither has the auto industry but at minimum, a repeat of the request for 7.0 carbon monoxide is reasonable to expect.

Meanwhile, California Republican William Dennemeyer has introduced a bill backed by the aftermarket to restore the two-year or 24,000-mile warranty.

The 5/50 emissions warranty, according to the independent repair shops, has given car dealerships a competitive advantage.

The longer warranty, they claim, not only returns motorists to dealerships for emission work but for additional work found by any enterprising service writer — aided and abetted by EPA, which developed a lengthy list of parts "solely or primarily" intended to reduce emissions.

Sky-Top opens up the Cougar

Sky-Top Sunroofs, Ltd., St. Louis, now offers a power moonroof for the 1983 Mercury Cougar. The electrically operated roof has an automatic wind deflector, a privacy sun shade and a mirror-coated glass panel that is available in either silver or bronze colors. The frame, wind deflector and trim ring are offered with an optional charcoal finish. Sky-Top offers a similar roof for the '83 Ford Thunderbird.

California Datsun deals try 'balloon' financing

By Matt De Lorenzo
Los Angeles Reporter

LOS ANGELES. — An alternate financing package that features a conditional sales contract with a balloon payment is being offered by a number of California Datsun dealers through a program sponsored by Security Pacific National Bank.

Called the Assured Value Program, the package offers buyers the option of lower monthly payments for 36, 48 or 60 months plus one extra balloon payment. The interest rate of these contracts is 15.99 percent.

The balloon payment is pegged at the expected value of the car at the end of the conventional financing term, similar to a residual value on a lease. Generally, the program promises to reduce the regular monthly payment by 25 percent.

When the balloon payment is due, the customer will be offered the option of paying off the car for that price, refinancing the amount or turning the car over to Security Pacific.

"It's just a third way of financing so a guy can reduce his payments," said Jim Bess, owner of Jim Bess Datsun in Canoga Park. Bess is vice president of the Southern California Datsun Dealers Assn.

• The program is being offered directly to Datsun dealer associations in California only and was developed specifically for them by the bank. Security Pacific currently provides a subvention program to Datsun dealers through Nissan Motor Corp. in U.S.A. for 8.8 percent truck financing.

"I think it's a great additional financing package," Bess said, adding that Security Pacific is offering the program exclusively to Datsun dealers for the next two months.

Robert Monteith, a senior vice president with the bank, said, "What we do with the program at the end of the exclusive arrangement hasn't been decided yet."

Monteith said the program not only allows the buyer to obtain a vehicle for a lower monthly payment, but also gives that person all the advantages of ownership.

In addition, the buyer is guaranteed that the car will be worth at least the same amount as the balloon payment and therefore, he or she is protected from downside market conditions except for abnormal wear and tear or excessive mileage.

"It's an example of what's needed in the market today—innovative financing programs to satisfy the needs of the consumer and retailers," Monteith said.

• All cars and trucks in the Datsun line are eligible for the program allowing dealers "to sell from their complete stock," Monteith said.

Datsun dealer Bess said the program "is attractive to first-time buyers by making monthly payments comfortable."

The financing package also allows buyers to move up to more-expensive cars for the same monthly payment as on lower-priced conventionally financed vehicles.

Bess said the new program

Loan rate now 9.8 pct. on some Chrysler models

Chrysler Corp. models previously eligible for 8.7 percent financing became eligible for 9.8 percent financing, effective July 11.

Three lines eligible only for rebates continued to be eligible for them.

Chrysler vehicles getting 9.8 percent financing under a new program that runs from July 11 to Aug. 10 include: '82 TC 3/024; '83 Turismo/Charger (except Shelby); '82/'83 Omni/Horizon; '82/'83 Scamp/Rampage; '82/'83 Champ/Colt (except base models); '82/'83 Sapporo/Challenger; '82/'83 Arrow, Ram 50 pickups, Power Ram 50 (except base model of the Power Ram 50).

Meanwhile, the $300 rebate offered on Reliant/Aries continues unchanged until July 31, when it ends. The $500 rebate on 2WD and 4WD 250 and 350 pickups continues unchanged until Aug. 10, as does the $750 rebate on Ramcharger.

Automotive Hall of Fame honors Henschen

Mark M. Henschen, right, president, Henschen Motor Co. (Oldsmobile-Cadillac), Alliance, O., received the Automotive Hall of Fame's Award for Young Leadership and Excellence. Emil G. Stanley, president of the Youth Committee, made the presentation while Karen Henschen, Mark's wife, looked on. The award was made during the Automotive Hall of Fame's sixth annual dinner at the Hyatt Regency Hotel, Dearborn.

McDonald, Sommer co-chair Concours

General Motors President F. James McDonald and Don Sommer, president, American Arrow, Troy, Mich., try out the rear seat of a 1931 Cadillac V-16 Phaeton. The car is one of nearly 150 classic, antique and sports cars that will be on display at the fifth annual Meadow Brook Concours d'Elegance Sunday, Aug. 7 at Meadow Brook Hall in Rochester, Mich. McDonald and Sommer are co-chairmen of the event.

Chrysler names top 4 officers to new 'Office of Chairman'

Chrysler Corp. last week set up an Office of the Chairman "to plan and direct the company's operations." Named to the office were the corporation's four top officers.

They are Chairman Lee Iacocca, 58; Vice Chairman Gerald Greenwald, 47; Harold K. Sperlich, 53, president, North American Automotive Operations, and Bennett E. Bidwell, 56, executive vice president, sales and marketing.

The formation of the new Chrysler office recalled a similar action at Ford Motor Co. in 1977. Ford's three-man group was called the Office of the Chief Executive. It was set up to spread around some of the responsibilities of Chairman Henry Ford and to ease the pathway for his successor.

Ford retired as chief executive in 1979 and as chairman in 1980.

Ironically, Iacocca was a member of the Ford Office of the Chief Executive. He was president of the company at that time. Henry Ford II fired Iacocca in July of 1978 and he went to Chrysler in November of that year. The third member of the Ford group was Philip Caldwell, now chairman.

Chrysler's move last week stirred speculation as to whether Iacocca is considering departure or at least a lessening of his duties. Iacocca will be 59 in October.

The departure of Chrysler's saviour does not appear to be imminent, although the formation of the new office is a realistic sharing of duties with an eye toward choosing a successor when Iacocca decides to retire or pursue other activities.

At the moment, Greenwald seems to be the frontrunner for the chairmanship. Chrysler also could name a president at any time; the post has been vacant since 1981. Sperlich and Bidwell are the top contenders. All are former Ford executives.

• Speaking to reporters after the Chrysler annual Shareholders' meeting in May, Iacocca said he planned to stay with the company "four or five quarters" after Chrysler is profitable and the guaranteed loans are repaid.

Chrysler made a record profit in the first quarter of this year, and several analysts expect the company to continue to be profitable throughout the year.

The first of the loan guarantees ($400 million) was repaid in June; $800 million worth of government-backed loans remain outstanding, but at relatively low interest rates so Chrysler may not want to rush to pay them off. At least one analyst, however, has predicted that Chrysler will pay them off before the end of 1983.

In announcing the Office of the Chairman, Iacocca said: "This type of corporate organization and leadership will be required as Chrysler returns to being a privately financed company with major opportunities in the North American automotive market.

"The Office of the Chairman will direct and coordinate the major functions of the company, and each member of the office will concentrate on those activities for which he is most qualified."

He added that the office has been established "to provide a closely coordinated senior management team to work together on all matters pertaining to the corporation."

In the new setup, functions reporting directly to Iacocca are Corporate Strategic Planning, the General Counsel's Office and the Personnel and Organization Office. Iacocca, of course, is chief executive officer of Chrysler.

Greenwald now is responsible for the Finance Office in addition to his former duties as head of Corporate Staff and International.

Sperlich continues to be responsible for the Manufacturing Group, Product Development organizations and the Procurement and Supply Office.

Bidwell is responsible for the Sales and Marketing Group and the Public Affairs Office.

Bidwell also was elected to the Chrysler board of directors. He joined the company June 2 after two years as president of Hertz Corp. Before that, Bidwell was a Ford Motor Co. vice president and was a close associate of Iacocca's during Iacocca's years with Ford.

'84 GM price boosts slated to be 1-3 pct.

By Joseph Bohn
Marketing Editor

General Motors continued the trend toward moderate '84 price hikes, with its lowest increases due on small cars, first seen with Chrysler (Automotive News, June 20).

Ford, which had been prepared to announce fleet price protection increases, reworked its numbers after GM's announcement. GM's low increases caught Ford off guard. The company expects to make an announcement this week.

GM, in a price assurance letter to cover '84 fleet orders, hiked overall prices over 2 percent, on a sales-weighted basis.

Its smallest increases of 1 percent, like those at Chrysler came on subcompact Chevrolet Chevette/Pontiac 1000 models and X-cars — Chevrolet Citation, Oldsmobile Omega, Pontiac Phoenix and Buick Skylark. However, these cars aren't doing all that much volume.

(Chrysler held the line on subcompacts and protected compact K-cars against any increase over 1.4 percent.)

GM's J-body Chevrolet Cavalier, Pontiac 2000, Oldsmobile Firenza and Buick Skyhawk and the A-body Chevrolet Celebrity, Pontiac 6000, Oldsmobile Cutlass Ciera and Buick Century came in for 2 percent price protection.

All other cars, which include the larger models, came in for 3 percent price protection. The '84 Corvette price remains unchanged.

On the truck side, the Chevrolet S-10 and GMC S-15 compact pickups received one percent price protection and other light trucks, including the Chevrolet S-Blazer and GMC Jimmy, were protected against hikes over 2.5 percent.

The fleet price-protection announcements are intended to cover dealers against any increases on cars and trucks which may be subsequently announced when firm '84 prices are disclosed. They are a good barometer of how final '84 pricing will end up.

• GM didn't spell out any increases for optional equipment, leading to speculation that it will hold the line there until later in the fall.

Harvey Heinbach, analyst with Merrill Lynch, feels that a lot can still "be done in equip-

Gain in Service Index biggest in 49 months

By Francis J. Gawronski
Service Editor

Service and parts volume at the nation's new-car dealerships took off in May to register its biggest monthly advance in 49 months, according to the Automotive News Service Index.

In May, dealers' service and parts business amounted to 115.1 percent of the business recorded in the same month last year.

The increase in May was the biggest since April, 1979, when the combined parts and service business at dealerships was 15.4 percent over the same month the previous year.

The increase in shop business in May also marked the third consecutive month in which volume has shown an increase over the comparable year-earlier period.

All five indicators used in the Service Index were up impressively, with gross profit on all labor, parts and accessory sales — the most important indicator from the dealer's viewpoint — topping last year's figure by 19.8 percent, the biggest increase since June, 1980, when profits topped the year-ago figure by 21.2 percent.

The second largest increase in May was recorded by shop parts sales (those used on both customer-paid and warranty repairs), up 19.1 percent, followed by sales of all parts and accessory sales, which climbed 15.5 percent over the year-ago figure.

Total labor sales (customer-paid and warranty) topped last year's figure by 13.7 percent, while repair orders written were up 10.1 percent, the first increase since December, 1982, and the biggest jump over the year-earlier figure since October, 1978, when repair orders topped the year-earlier total by 10.2 percent.

Figures used in the Automotive News Service Index are averages compiled from dealer reports on shop operations from a cross-section of the nation's new-car dealers.

Because of the sharp increase in shop volume in May, service and parts business for the January-May period jumped to 106.3 percent of the volume recorded in the same period the year before. Business in dealers' shops for the January-April period of 1983 amounted to 103.8 percent of the year-earlier volume.

The strongest indicator in the January-May period was gross profits, up 8.4 percent over the year-ago period, while shop parts sales advanced 6.7 percent.

Labor sales during the January-May period were up 5.9 percent, while sales of all parts and accessories jumped 5.6 percent.

Repair orders written for the five-month period of 1983 topped last year's total for the same period by 0.6 percent.

SERVICE INDEX 115.1*

	May, '83 vs. May, '82	5 mos., '83 vs. 5 mos., '82
Gross Profit on All Labor and P&A Sales	+19.8%	+ 8.4%
Repair Orders Written	+10.1%	+ 0.6%
Total Labor Sales (Customer & Warranty)	+13.7%	+ 5.9%
Shop Parts Sales (Customer & Warranty)	+19.1%	+ 6.7%
Sales of All Parts and P&A	+15.5%	+ 5.6%

*—Survey by Automotive News shows that dealers' service and parts business in May, 1983, was 115.1 percent of business in May, 1982. Service business in the five months of 1983 was 106.3 percent of business in the corresponding period in 1982.

Mercury LN7 will bow out

Ford to offer turbo on EXP for '84

Ford is looking to enhance the performance image of the two-seat EXP coupe by offering a turbo version for 1984.

EXP will be the only two-seat model sold by Ford as the Lincoln-Mercury LN7 is being discontinued. The new EXP, however, incorporates the bubble hatchback used on the LN7.

Using an Ishikawajima-Harima Industries (IHI) turbocharger producing eight pounds of boost, the EXP's 1.6-liter four-cylinder engine is rated at approximately 118 horsepower. The turbo unit is a blow-through type located upstream of multi-port fuel-injection system. The power plant has an 8:1 compression ratio, down from 9.5:1 of the standard high output motor allowing the use of regular grade, 87-octane, unleaded fuel.

EXP Turbo models will be available with a five-speed overdrive manual transaxle only, while standard EXPs equipped with the HO 1.6-liter engine will be offered with a choice of five-speed manual or three-speed automatic transaxles.

Exterior styling of EXP Turbo models feature a front air dam and rear spoiler, larger Turbo lettering on the doors and a unique C-pillar applique.

Missouri lawmakers OK $20 million Chrysler loan

JEFFERSON CITY, Mo. — At a time when many bond issues are having trouble, the Missouri Legislature approved a bill making Chrysler eligible, upon Gov. Christopher Bond's signature, for $20 million in state aid to help the company retool its Fenton plant for its new G24 sports car.

It is expected the funds will be utilized for air pollution controls.

Shedding light on automation

'It doesn't mean dark factories manned by robots'

"At Gould, factory automation means putting the electronic tools of management and control into the hands of people responsible for all levels of production," says Jack A. Blaeser, executive vice president, Electronic Systems Business Section, Gould Inc.

"It does not mean dark factories manned by robots and run by computers without any human intervention. Nor do we think it ever will."

Quite to the contrary, effective factory automation makes the people responsible for production at all levels an integral part of the automated process, Blaeser says.

"It helps them better understand both the operation of individual machines and the complex relationships within the overall production process. It permits those responsible for production strategies to examine their impact before they are implemented," he adds. "And, it facilitates control over the elements of production at all levels."

Effective factory automation is based on information — timely, accurate information that is the basis for making the right decisions, using the right tools, and building the right products with a minimum of inventory, waste and downtime, Blaeser emphasizes.

"Our goal at Gould is to provide electronic tools to make the flow of information within a manufacturing facility as efficient as the flow of the production process it reflects and controls," Blaeser points out. "In so doing, we believe the productivity of that entire facility can be increased in the same way mechanical automation increases the productivity of its individual operations."

Stripped of technical detail, the requirements for making it happen are quite simple. One, you must be able to tell the appropriate people what's happening. Two, they must be able to examine the consequences of their decisions. And, three, they must be able to implement the changes they decide upon.

It doesn't get complicated until you try to do it, he states. "What's happening," for example, means different things to different people. Plant managers and foremen both may be interested in production rates, but the scale of their interest is likely to be quite different.

Examining the consequences of a decision may mean confirming that a switch has been turned "on," or it may mean simulating the response of the entire facility to various production strategies.

Implementing a change could require adjustment of one control, or re-configuration of an entire production line to make an alternate part.

"An effective factory automation system must address all of those requirements, and the thousands of others found in the manufacturing environment," Blaeser says. "It must facilitate entry of computer generated designs into the production flow, support the needs of manufacturing requirements planning, provide the data base for machine and facility optimization programs, keep maintenance, chart machine trends, and control inventory."

At the other end of the spectrum, it must provide programmable control capabilities for all the individual machines on the production floor, capabilities that must include controllers, servos, sensors, and even limit switches, motor controls, and protective devices, he adds.

In short, a factory automation system is the central information/communication/control network that supports and implements all of the decisions that ultimately determine manufacturing productivity and product quality, while properly managing capacity and inventory, the Gould executive states.

The possibilities of such a system are staggering. "Consider that our very best transfer lines typically run little more than half the time; that it is not unusual in our best plants to find machines standing idle waiting for parts, while in another area parts pile up waiting for machine time; or that we usually do not know what a particular production strategy will really accomplish until it is put into

John A. Blaeser: "Make no mistake."

operation," Blaeser says.

None of these problems are reflections of bad management. They are all results of bad information, no information, or the inability to implement decisions immediately, he adds. "If we could predict when a transfer line was going to stop, we would have the right people waiting to fix it. If we knew what all the machines on the floor were doing, and where all the parts were, we would match capacity to requirements more efficiently. If we could simulate the impact of a production strategy, we would select the best alternative before we were committed," Blaeser says.

"Make no mistake, success or failure still will be determined by the quality of the tools we put in the hands of people who make things happen. But in today's world, those tools must be electronic," he says.

"Obviously the computer is the most visible element and frequently receives the most attention," Blaeser adds. "In practice, however, it is the ability to supply and balance all three elements that makes the difference between just talking about factory automation and actually making it work. Translating potential benefits into real productivity gains requires a thorough understanding of all three disciplines and their relationships within the unique factory environment. Here, they are not, in fact, distinct functions but steps in a continuous process that begins and ends on the production floor."

There machine controls constantly gather information and pass it through communication networks to displays, computers, and other devices which present it to appropriate personnel, Blaeser points out. People make decisions based on that information and generate commands that are passed back through the communication network to the machine controls for implementation.

"The changes that flow from those decisions become new information, and the process is repeated continuously. Add the ability to input information and implement decisions made outside the loop just described, and you have a working model of an effective factory automation system," he adds.

Once again, it doesn't get complicated until you try to do it. "Take the case of a typical manufacturing plant. A system of the type just described would contain one or more computers, several different terminals and displays, at least one communication network and associated control system, dozens of programmable controllers, hundreds of servo motors, and thousands of switches, motor controls, overload protectors, and similar devices.

"Chances are very good that the machine control portion is already in place, and that none of its components were selected on the basis of compatibility with a higher level communication and computer system. In fact, they probably can't even communicate with each other.

"Sometimes the best answer to this problem is simply to replace the whole machine control portion with new components that are compatible with each other and the overall system. Gould has consciously designed products with the ability to do just that, with offerings for every aspect of a comprehensive factory automation system," Blaeser emphasizes.

Most factory automation systems will be installed in existing facilities where a variety of equipment is already in place. The challenge will be to integrate that equipment into a workable system. It's been Gould's experience that the best way of meeting the challenge is to have a variety of solutions available for each aspect of the overall problem, he says. □

Coil coaters shake slump

Bright signs for pre-coated steel and aluminum

The coil coating industry weathered the recession in 1982 along with its major customer industries. Now coil coating industry leaders see several bright signs as pre-coated steel and aluminum held onto their market shares or scored gains in key end-use markets.

The National Coil Coaters Assn. (NCCA) says total estimated North American shipments of pre-coated steel and aluminum in 1982 slipped 8.2 percent to just under 3.1 million tons compared to nearly 3.4 million tons in 1981. Coil coated steel shipments are estimated at 2,477 million tons, down 8.3 percent from 1981 levels.

Estimated coil coated aluminum deliveries amounted to 616,000 tons of metal in 1982, a decrease of 7.9 percent from the previous year.

Total 1982 shipments of 3,093 million tons of coated coil represent an increase of more than 666 percent from the 464,000 tons shipped in 1962, the year NCCA began keeping statistics. And coil coating's peak year of 1978, when 4,056 million tons were shipped, registered an 874 percent increase over the 1962 totals.

NCCA compiles these estimates based on actual shipments reported to the association by both member and non-member companies. Figures are calculated for North American markets only.

NCCA member executives agreed that 1982 was a year of recession for the coil coating industry. Major customer industries such as appliances, commercial and residential construction and heavy appliances remained at depressed operating levels throughout much of the year.

Nevertheless, pre-coated steel and aluminum deliveries to furniture and the vital transportation industry held virtually even in 1982. Transportation steel tonnage totaled 898,532 tons in 1982 and 907,659 tons in 1981. Transportation aluminum tonnage was 25,470 tons in 1982 and 27,669 in 1981.

Transportation remained the largest single market for coated coil in 1982. Shipments of steel pre-coated with weldable zinc-rich primers for passenger automobiles, the largest tonnage category within the industry, increased to 717,883 tons in 1982 from 668,750 in 1981.

NCCA members say more car makers are specifying corrosion-resistant, coil coated steel for more parts on more models than previously. This led to increased tonnage in 1982 despite low car-build figures. □

ESTIMATE OF TOTAL SHIPMENTS

Forging behind

Selective casting

• Final revised figures of 1982 sales of open die forgings produced by independent forge shops show a total industry volume of $771 million, down 27 percent from $1,057 million in 1981, according to the Forging Industry Assn. Bookings of forging orders during 1982 amounted to $634 million, 46 percent below $1,178 million in 1981.

• Total industry volume for sales of impression die forgings produced by independent forge shops in 1982 were $2,336 million, down 19 percent from $2,883 million in 1981, says the Forging Industry Assn. Bookings of forging orders in 1982 totaled $1,361 million, down 45 percent from $2,478 million in 1981.

• Selective Electronics Inc., Valdese, N.C., receives the first five North American orders in the steel, foundry and aluminum industries for Optocator non-contact measuring systems. The five systems will be used for measuring the level of molten steel in a casting operation, inspecting large diameter hot pipe and tube, measuring thickness of hot slab in a reversing roughing mill, measuring dimensions of forged railroad wheels and measuring waves in coated strip.

GM Australia faces tough times

'Recovery Plan' leak to media adds to woes

By Pedr Davis
Staff Correspondent

Things have never looked more bleak for General Motors Holden's Ltd. (GMH), Australia's largest car company. Not only did it slip behind Ford Motor Co. Australia Ltd. for the first time in 1982 but now its sales have fallen behind Toyota this year.

To make matters worse, someone filched a top secret GMH "Recovery Plan" document and leaked it to the media. The document received national coverage on television and in the press, baring GMH's inmost secrets in a humiliating and devastating manner.

Among other sensational revelations, the document showed GMH was actively considering merging with Japanese companies Toyota or Nissan in Australia and that its huge losses are likely to continue for some years.

Top-level sources in the organization indicate the scenario is not one of mergers, nor will any of the existing five car manufacturers withdraw from the Australian market.

Despite the infamous document, acknowledged by GMH as authentic, a merger between GMH and a Japanese car company is also unlikely. "We have never talked merger with Nissan, Toyota or anyone else," says Ivan Deveson, GMH director. "When a company is in deep trouble, as we are, it canvasses all possible options. That stolen document—and I emphasize that it was stolen—was the first draft of a possible business plan which had been prepared for (managing director) Chuck Chapman. It was one of several such plans drawn up for discussion. This particular one never reached the discussion stage.

"The possibility of a merger was one of several options open to us. When you are desperate you look at everything. But a merger is not an option we are taking, nor is it one which has been discussed by us outside our own company," Deveson says.

Rob McInery, another member of the GMH task force currently formulating a business recovery plan, confirms that a merger has never been discussed outside GMH headquarters and there are no plans for one in the foreseeable future.

Apart from its strong dealer network and spare parts profitability, GMH is not an attractive marriage proposition. Its problems are far too great for an outside firm to voluntarily share.

The Holden's organization, which grew large during the 1950s and 1960s, is too unwieldly to meet the challenge of the 1980s. Slimming down will be painful and expensive. Even after recent retrenchments, GMH employs 43 percent of Australia's total car making personnel, but its market share is 22 percent.

GMH has about 15,500 on its payroll compared with about 3,500 each for Toyota, Nissan and Mitsubishi. Shedding the GMH fat and streamlining the organization for profitability is a task none of the Japanese companies wants.

GMH has already learned through closing its Pagewood plant that the cost of pruning an unwanted factory extends far beyond the millions of dollars needed in severance pay. Executives freely admit that the ill-will created by the Pagewood closing cost it several thousand new-car customers.

The smallest of the local firms, Mitsubishi, spent only $85 million in purchasing the Chrysler Corp.'s facilities; it has 11 percent of the vehicle market. Toyota, which now outsells GMH, has a $300 million commitment and GMH has $800 million.

The three Japanese firms are set for the tight conditions of the 1980s with trim and highly flexible organizations. Toyota and Nissan were fortunate enough to come into Australia with a clean slate. They were able to design and build manufacturing facilities suitable for the 1980s, whereas GMH has been forced to continue with dated plants and equipment.

The Japanese firms astutely introduced the concept of having a relatively small staff to handle key operations and using subcontractors for other work. In this way they can react to a sales downturn by laying off a handful of their own people.

GMH has built an organization that manufactures most of its cars inhouse, and its huge work force has became a liability as sales fall. "During the 1960s we made a rod to beat our own backs in the 1980s," Deveson admits.

About the pilfered "Recovery Plan," Deveson says, "That document was never sighted by our overseas subsidiaries or parent company until after it had been stolen. As yet we do not have a final business plan. When we do, it will be presented to Detroit for approval."

Director Deveson: 'A merger is not an option we are taking.'

He emphasizes: "The industry must cooperate on the inside and compete on the outside." He did not say so, but this phrase represents GMH's main route to recovery.

GMH buys millions of dollars worth of shock absorbers annually from Mitsubishi in Adelaide. It sells sheet metal stampings, castings and engines to Toyota, Melbourne. GMH is also trying to sell castings to Ford, Geelong. This interchange of components is the tip of an iceberg which will soon be as big as the industry itself.

For optimum efficiency and utilization of investment, a car maker should produce 250,000 cars a year per plant, a factor known in the industry as a "module." In Australia five companies are producing a total of just over 300,000 cars a year. "Five into 1.2 modules is dumb," says Deveson.

• Here is the scenario that seems to be shaping up:

There will be no mergers between the five existing car makes in Australia.

GMH will scale down operations to manufacture more parts from fewer facilities.

No one will take up the federal government's offer to withdraw and receive favorable treatment on import quotas. The existing five have too much commitment and investment. More importantly, they believe the long term potential is excellent.

The number of individual models built in Australia will diminish. The five makers currently build 16 basically different vehicles, not including station wagons and other variations. This number could fall to 10.

There will be a rapid and dramatic increase in the use of common components with each maker becoming a specialist in a particular area.

Some of the five will form joint manufacturing companies to export components, especially those involving aluminum and plastic technology.

In short, each manufacturer will become an assembler of motor vehicles and a high-volume manufacturer of certain components for sale to its rivals. In this way all five will be able to reach the 85 percent local content required to avoid import duty and quotas. They will also achieve the economies of scale desperately needed for profitability.

GMH could, for example, specialize in sheet metal and the production of dies and raw castings. Mitsubishi could concentrate on suspension items, Toyota and Datsun on machining parts and Ford on casting engine blocks.

GMH is already achieving high-volume with its J-car engine plant, and exporting the bulk of output.

The $300 million plant has now built over 230,000 engines of which 200,000 have been sold overseas, mainly to Britain and Germany. So far the plant has operated at a loss but the breakeven point is in sight.

GMH is negotiating to export 1,000 station wagon kits a month. As the only GM company outside the U.S. to build a wagon version of the J-car, GMH already has a contract to supply about 15,000 wagon kits to Vauxhall in Britain. Executives are confident there is a good chance of selling large numbers to Germany, South Africa, Japan and Brazil where sedans similar to the Camira are built. □

Prime time ahead for polyurethane

Mobay makes some optimistic forecasts

Reversing the trend of the past three years, the polyurethane industry is heading for five years of growth, according to G. T. Harrick, director of marketing, Polyurethane Division, Mobay Chemical Corp.

The Mobay official says his optimistic forecasts assume a recovering national economy. Mobay, whose parent company is Bayer AG of West Germany, is headquartered in Pittsburgh, and is the nation's largest producer of polyurethane chemicals.

Microcellular urethanes are expected to lead the way with an average gain of 10 percent during 1983-87, Harrick says. Rigid foam will rise an average of more than 6 percent annually, and flexible foam will climb by an average of 5 percent per year, the marketing executive forecasts. These estimates take into account a "leveling" projected for 1986, when a "readjustment" expected in the economy will affect the rigid and flexible segments of the industry, he says.

The three cellular segments of the polyurethane industry—flexible, rigid and microcellular—will show a combined 8.9 percent increase in 1983 over 1982, and a combined 32.6 percent jump in 1987 over 1982. According to preliminary figures, 1982 volume in the three categories was 1.685 billion pounds; 1.835 billion pounds is the forecast for 1983 and 2.235 billion for 1987.

No 1983-87 forecast was made for the non-cellular portion of the industry, which includes polyurethane coatings, caulks, adhesives, thermoplastics and cast urethanes.

Microcellular applications will grow by 12 percent in 1983 to a total of 100 million pounds—largely in the automotive and shoe industries—and by 65 percent to 149 million pounds in the five-year period from 1983 to 1987. "By the 1985 model year, fully 75 percent of all domestic cars will have polyurethane front and rear ends," Harrick says. He expects the growth of reinforced reaction injection molded (RRIM) auto components to reach 20 million pounds by 1987.

Rigid polyurethane foam volume is expected to increase modestly to 580 million pounds this year, approximately 6 percent above 1982's 545 million. This figure is based on expected increases in residential housing starts (sheathing) and appliance sales. Preliminary figures for 1982 show that rigid polyurethane chemical consumption of 545 million pounds was down 7 percent from the 1979 peak volume year.

"Flexible foam growth over the next five years will average 5 percent annually with a strong recovery this year and next," Harrick says. "This estimate is predicated on increased automotive sales, housing starts and furniture sales, but not including significant new penetration of the bedding market."

According to the preliminary figures, 1982 saw an 8.6 percent drop in consumption of flexible foam to 1.050 billion pounds from 1.149 billion pounds in 1981. Contributing significantly to this result was the year's 24-year low in domestic automobile production. Harrick predicts domestic auto sales will increase to 6.8 million in 1983 and an additional 10 percent next year. □

How to reduce the weight of radiator parts

The radiator support on the 1984 Corvette combines an auto application first and a significant materials innovation.

One of the materials engineering innovations on the 1984 Chevrolet sports car is the light weight SMC used to mold components of the radiator support system. Also called the cooling module, this assembly supports the engine cooling radiator, the radiator fan and the air conditioner condenser. The assembly functions as a fan shroud and baffle to direct maximum air flow from front intake scoops to the radiator and condenser.

The composite radiator support assembly is the first to be installed on a U.S.-built passenger car.

Three parts of the radiator support are molded in 33 percent glass fiber sheet molding compound (high glass content for high strength) to which glass microballoons have been added to reduce weight.

Previous Corvettes used an all-steel assembly for these functions. By designing in SMC it reportedly was possible to reduce the weight of the assembly by more than half. By adding 5 percent by weight of microballoons (tiny hollow glass spheres), the weight of the SMC parts was reduced by another 10 percent. The estimated savings over a comparable steel structure is well over 60 percent. □

Opening day at Stillman Ford

William Luciano, second from right, Englewood (N. J.) deputy chief of police, cuts the ribbon at the opening of Stillman Ford, a division of Stillman & Hoag, Inc. (Buick). Also pictured, from left, are: Robert Donfield, Ford zone manager; Robert Farnon, vice president, Midlantic Bank; Walter Stillman, chairman of the board, and Ken Wilshaw, dealership general manager.

According to NHTSA's annual report

MPG topped CAFE in '81 and '82

WASHINGTON. — The total fleet average fuel economy exceeded the auto CAFE standard (24 MPG) by more than 2 MPG in the '82 model year and exceeded the '81 CAFE (22 MPG) by more than 3 MPG in the '81 model year, according to the Seventh Annual Report to Congress on the NHTSA fuel-economy program.

Total fleet average for makers whose products sold more than 10,000 worldwide (that is, all vehicle makers except low-volume ones) for the '82 model year was 26.2 MPG compared with 25.1 for the '81 model year.

While most auto makers showed improvements in '82 over '81, some did not. These include Volkswagen, for example, which was allowed by law to include its less-fuel-efficient imports — Porsche and Audi — and saw its CAFE drop from 33.5 MPG to 32.4 MPG.

Other makers may have been affected by sales of bigger models or those with more options.

Mazda, for example, slipped from 31.1 MPG in the '81 model year to 29.6 in '82, and BMW went from 26.6 in '81 to 26.4 in '82. Peugeot fell from 27.9 in '81 to 27.1 in '82, and Toyota averaged 30.4 in '82, down from 30.9 in '81.

Domestic makers showing improvement were (years listed are model years):

American Motors, 24.0 MPG for '82 from 22.5 for '81.

Chrysler Corp., 27.0 for '82 from 26.4 for '81.

Ford Motor Co., 24.5 for '82 from 23.3 for '81.

General Motors, 24.3 for '82 from 23.2 for '81.

Among imports showing improvement were:

Alfa Romeo, 24.2 MPG for '82 from 22.5 for '81.

Chrysler (Mitsubishi), 34.2 for '82 from 32.0 for '81.

Datsun, 30.8 for '82 from 30.5 for '81.

Ford Laser (sold by Ford in Puerto Rico; the Laser is the Mazda GLC), 34.6 for '82 from 34.3 for '81.

Honda, 33.4 for '82 from 30.8 for '81.

Isuzu, 35.8 for '82 from 34.7 for '81.

Jaguar, 18.8 for '82 from 18.4 for '81.

Mercedes-Benz, 26.1 for '82 from 25.1 for '81.

Renault, 32.2 for '82 from 29.4 for '81.

Saab, 24.1 for '82 from 23.4 for '81.

Subaru, 32.3 for '82 from 30.4 for '81.

Volvo, 25.0 for '82 from 22.3 for '81.

• NHTSA concluded in its report to Congress: "By 1995, the projected cumulative fuel savings if all new cars and light trucks were to just meet the federal fuel-economy requirements through 1985 would amount to approximately 400 billion gallons compared with consumption projected at 1976 vehicle fuel-economy levels."

American Motors took advantage of its special provision and will include 150,000 Renault Alliances in its 1983 CAFE, but AMC must achieve a domestic content of at least 50 percent in the 1983 model year and at least 75 percent in the 1986 model year.

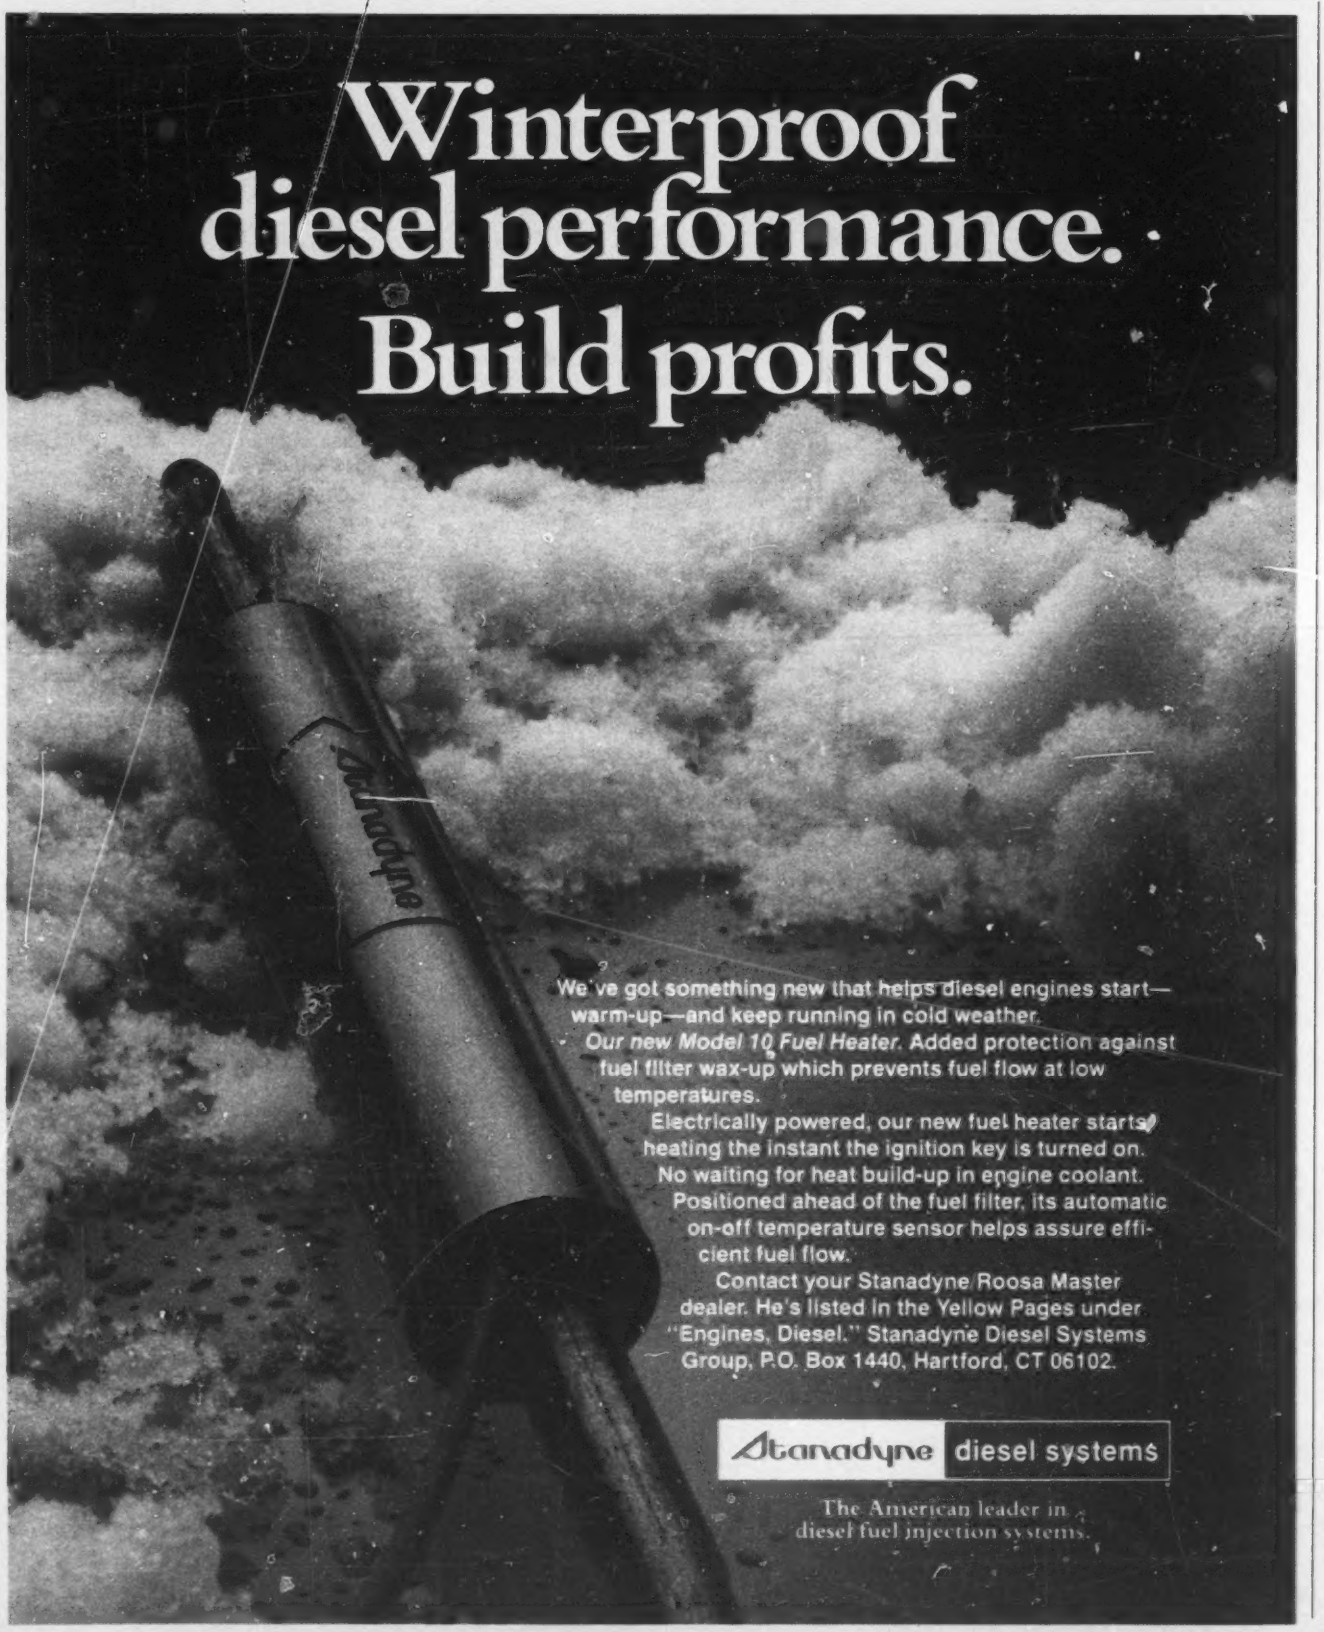
During fiscal 1982, Aston Martin, Avanti, Checker, Excalibur and Rolls-Royce petitioned NHTSA to be exempt from the 1981-85 general CAFE standards and asked for lower alternative standards. (Checker's petition was mooted when it stopped production last July.)

NHTSA reviewed the capability of each low-volume maker and, before setting the maximum feasible fuel-economy levels for them, made an adjustment for the California nitrogen oxide standard of a 7 percent fuel penalty. NHTSA then set the following standards:

Low-Volume Makers MPG Standards

Model Year	Avanti	Rolls-Royce	Aston Martin	Excalibur
1981	18.2	10.7	12.2	17.9
1982	18.2	10.6	12.2	17.9
1983	16.9	9.9	11.3	16.6
1984	16.9	10.0	11.3	16.6
1985	16.9	10.0	11.4	16.6

Currently, the only big job remaining for NHTSA to accomplish under the 1975 law is to set fuel-economy standards for 1986-87 model-year light trucks, which must be finished by December, 1983.



GM Motors Trading appoints Keuffel VP

DETROIT. — Gerd H. Keuffel has been appointed vice president of Motors Trading Corp., a subsidiary of General Motors. He will be responsible for countertrading and international sourcing operations for Latin America.

Keuffel most recently served as president of Hua Tung Automotive Corp., a joint venture operation between GM and Taiwan Machinery Mfg. Corp. He joined GM in 1964.

Pontiac paces Pikes Peak

A Pontiac 2000 Sunbird with a new 1.8-liter overhead cam, turbocharged four-cylinder engine was the official pace car at the 61st annual Pikes Peak Auto Hill Climb. The new turbo engine turns out 150 HP at 5,600 RPM and delivers 0-60 performance in about nine seconds.

Imports climb 18 pct. in June

Domestic-car sales jump 47 pct.

By Jenny L. King
Staff Writer

Up, up and away. New-car sales continued their climb in June with their largest increase for any month this year and their best June total since 1979.

Domestics were up 48.01 percent over 1982, imports were up 18.17 percent and the industry total improved by 38.88 percent during the month.

Sales by the domestic auto makers numbered 668,145 in June, highest for the month since 700,897 in 1979 and more than 200,000 units above the abysmal 451,430 reported just one year ago. This June, makers and dealers provided guaranteed lower interest rates to assist consumers with payments; in 1982 there were no stimulants to prod sales.

Import sales totaled 235,282 compared with 199,100 in June of 1982. They accounted for a respectable 26.04 percent of the U. S. market. That was, however, their shallowest June penetration since 1979 when imports captured 22.47 percent of the market. Last year they claimed a record 30.61 percent; it was 29.59 percent in 1981, and 27.15 percent in 1980.

Total passenger-car sales for June numbered 903,427, up 38.88 percent from 650,530 the preceding year and the best June since 1979 when sales reached 904,000.

First-half domestic sales of 3,335,028 were up 13.64 percent compared with the first six months of 1982 when 2,934,824 new domestics were sold. Imports were up 10.63 percent in the first half, to 1,213,829 from 1,097,189. The industry total was up 12.82 percent, to 4,548,857 from 4,032,013.

• General Motors, Ford Motor Co., Volkswagen of America and Honda all reported their strongest month's sales for 1983 in June. GM was up 47.71 percent, to 382,650 from 259,056 last year. Ford jumped 40.72 percent, to 170,196 from 120,947. VW sales of 10,006 were up 27.99 percent from 7,818, and Honda reported deliveries of 5,248 new Accords from its Marysville, O., plant.

Chrysler Corp. was up 50.03 percent in June, to 83,779 from 55,842. American Motors doubled its sales in the sixth month, up 109.42 percent, to 16,266 from 7,767.

GM earned 57.27 percent of the domestic market in June, down slightly from 57.39 percent. Ford dipped to 25.47 percent from 26.79 percent. Chrysler edged up to 12.54 percent from 12.37 percent. AMC climbed to 2.43 percent from 1.72 percent, VWoA slipped to 1.50 percent from 1.73 percent and Honda earned 0.79 percent this year, its first June in the domestic market.

It was almost entirely good news for the domestic makes

Datsun dealers financing with 'balloon' note

Continued from Page 3

fits in well with his conventional financing plans, leasing programs and 8.8 percent truck rate.

Sherril Hops, executive director of the Southern California Datsun Dealers Assn., said the Assured Value Program was launched July 1 with "one of the strongest campaigns in cur history."

During the first 10 days, the association ran 238 30-second and 153 10-second spots on local television here. The association will run 200 more spots a week during the remaining three weeks of July.

"We had good sales in June," Bess said, "and we want to keep the momentum going."

The idea behind the short spots is to alert the public to the program, while the dealers are spelled out in print ads and by dealer personnel.

Despite the heavy media blitz, Bess said he hasn't been overwhelmed by the response. However, he attributes the lack of activity to the newness of the concept and the fact that it was launched over a holiday weekend.

New-car stocks hold steady at 47-day supply

Continued from Page 1

day supply, up from 43 days June 1.

The July 1 domestic inventory was divided this way by market segment: Subcompact, 17.04 percent; compact, 21.32 percent; intermediate, 38.01 percent; standard, 16.32 percent, and luxury, 7.31 percent.

• The July 1 days-supply figures by market class were:

Subcompact—Escort, 27; Lynx, 38; Turismo, 40; Horizon, 45; Chevette, 46; Rabbit, 47; LN7, 47; Charger, 50; Spirit, 50; EXP, 51; Omni, 52; Alliance, 54; Pontiac 1000, 56, and Eagle SX/4, 71.

Compact—Cavalier, 23; Pontiac 2000, 30; Skyhawk, 33; Aries, 37; Firenza, 40; Reliant, 41; Fairmont, 42; Topaz, 44; Tempo, 45; Firebird, 46; Camaro, 47; Cimarron, 50; Zephyr, 50; Mustang, 59; Dodge 400, 59½; LeBaron, 60, and Capri, 78.

Intermediate — Concord, 22; Cutlass Supreme, 28; Omega, 33; Malibu, 39½; Skylark, 42; Celebrity, 44; Regal four-door, 46; Regal coupe, 47; Pontiac 6000, 48; Bonneville, 49; Cutlass Ciera, 50; LTD, 51; Grand Prix, 58; Marquis, 58; Monte Carlo, 60; Phoenix, 60; Century, 62; Citation, 64; XR7, 70; New Yorker E, 82; Thunderbird, 84; Eagle, 93; Chrysler E Class, 97, and Dodge 600, 101.

Standard—Olds 88, 25; Olds 98, 28; Crown Victoria, 30; LeSabre, 33; Gran Fury, 35; Grand Marquis, 39; Diplomat, 41; Chevrolet, 50; Electra, 55; Cordoba, 57; Parisienne, 57; Chrysler Fifth Avenue, 74½, and Mirada, 101.

Luxury — Corvette, 22; Riviera, 47; Cadillac, 52½; Toronado, 53½; Seville, 59; Eldorado, 59; Lincoln, 61; Mark VI, 75; Imperial, 83, and Continental, 95.

VW council elects officers

Volkswagen's National Dealer Advisory Council has elected officers for 1983-84. Seated, from left, are: Peter Weiher, executive vice president, sales and marketing, Volkswagen of America; Ben Hulsey, Volkswagen North Freeway, Houston, chairman, and James R. Fuller, vice president, Volkswagen Division of VWoA. Standing, from left, are: James Meier, Volkswagen of Beaverton, Beaverton, Ore., member-at-large; Bill Sullivan, Volkswagen Santa Monica, Santa Monica, Calif., vice chairman, and Richard Dean, Dick Dean Economy Cars, Ballwin, Mo., secretary.

Honda's new CR-X widens Japan's sporty coupe market

Continued from Page 1

used on the 1.8-liter Prelude and now used in the Accord.

The 1.5-liter unit has Honda's electronic fuel injection system, and the accent is on power, with a rated output of 110 HP (JIS) at 5,800 RPM, while maximum torque is 100 pounds-feet at 4,500 RPM.

Since the 1.3-liter unit is intended to give excellent gas mileage, the power output has been kept down to 80 HP at 6,000 RPM, and torque is 32 pounds-feet at 3,500 RPM.

It has a carburetor instead of fuel injection, and on the Japanese 10-mode emission cycle, the 1.3-liter car returned 47 MPG, while at a steady 37 MPH, gas mileage is quoted as 77.6 MPG.

Also new is the suspension. At the front, Honda has adopted struts with longitudinal torsion bars instead of the customary coil springs. This was done so the hood height could be lowered and to provide more room for the engine.

At the rear, a dead axle, located by a pair of radius rods and a Panhard rod, is used. Anti-roll bars are fitted front and rear, but the one at the back is unusual in that it is inside the axle beam.

• Inside the car is a sporty fascia with a small instrument panel, either electronic or conventional according to the model. The front seats are well shaped to hold the driver and passenger, but the rear seats are too small for anyone except small children.

There are a couple of novelties in the body design. First, on some models there is a sunroof panel that slides above the roof, instead of submarining below the roof, as is normal.

This allows the panel to be larger than normal and prevents the mechanism from encroaching too much on passenger headroom.

Also new is a fresh-air vent toward the rear of the roof which is opened like a periscope to draw air through a duct to two vents just above the windshield. Stale air is drawn out of the body through the central pillars, and to ease the flow, the rear quarter side windows curve inward to meet the pillar.

Honda is selling the Ballade Sports CR-X coupe through its Verno dealers, alongside the Prelude, Quintet, Ballade and Vigor. The car is being built at Suzuka at 3,000 units a month, which seems an ambitious sales target for this type of car in Japan.

Japan's exports of cars to U.S. off 10 pct. in May

WASHINGTON. — Exports of Japanese cars to the U. S. in May totaled 143,411, down 10.91 percent from 160,972 in the year-earlier month, according to the Japanese Automobile Manufacturers Assn.

In April, the car export figure was 189,486, which was 4.78 percent higher than in April, 1982. May's total this year was 24.3 percent below April's.

For the first five months of this year, Japanese car exports to the U. S. were down 2.93 percent. The total was 685,378 this year and 706,098 in 1982.

Japan's truck exports to the U. S. jumped 31.34 percent in May, totaling 44,417, compared with 33,818 a year ago.

Five-month truck exports to the U. S. were 207,177, a rise of 2.86 percent over last year's 201,423.

Car production in Japan in May was 575,496, up 4.66 percent from last year's 549,873. Five-month car production was up 2.62 percent, to 2,929,910 this year from 2,855,183 in 1982.

May truck production climbed 9.02 percent to 323,033 from 296,308. For five months, it was 1,624,966, up 2.10 percent from last year's 1,591,960.

New-car registrations in Japan in May were 214,655, up 999 from last year's 213,656.

New-truck registrations of 174,415 in May were 2.26 percent above last year's 170,562.

Imports climb 18 pct.

June car sales ablaze: Domestics up 48 pct.

Continued from Page 69

last month. All but Imperial and AMC were up. Cadillac reported its 10th consecutive monthly increase, up 53.91 percent from last year. Oldsmobile said June sales of 94,367 were its highest in 50 months. Chevrolet was up 62.76 percent, Buick was up 30.14 percent, Oldsmobile was up 56.91 percent and Pontiac was up 21.20 percent.

At Chrysler Corp., Plymouth was up 21.41 percent, Chrysler was up 65.04 percent, Dodge was up 70.02 percent and Imperial was off 49.70 percent.

Ford was up 34.25 percent, Mercury shot ahead 58.98 percent and Lincoln was up 22.96 percent.

AMC was off 46.23 percent, VW was up 27.99 percent, and both Renault Alliance and Honda had no year-ago sales for purposes of comparison.

• Imports enjoyed the June sales fest, too. Saab was the first to report June results and it was an any-month record for the Swedish auto maker. Saab sales were up 78.23 percent to 3,135 from 1,759 last year. Jaguar had its 31st consecutive month of monthly record sales and was up 74.89 percent, to 1,581 from 904.

Audi sales of 5,981 were up 40.40 percent from 4,260. June was a record month for Audi, and for BMW, up 31.01 percent to its second best month in history in the U. S. Mercedes-Benz was up 25.95 percent, Porsche was up 60.13 percent, Volvo was up 9.03 percent and Peugeot was up 7.07 percent.

Top import Toyota exploded to 56,486 from 46,977, an increase of 20.24 percent. Second-place Nissan was up 16.35 percent to a June record of 54,389 from 46,747 a year earlier. Imported Hondas were up 6.90 percent, Mazda was up 8.81 percent and Subaru was up 14.33 percent.

Imports accounted for 26.04 percent of the total market in June, followed by U. S. intermediates at 25.01 percent, compacts at 17.60 percent, subcompacts at 13.86 percent, standards at 12.75 percent and luxury models at 4.74 percent.

Of the domestics-only market, 33.82 percent were intermediates, 23.79 percent were compacts, 18.74 percent were subcompacts, 17.24 percent were standard-size cars and 6.41 percent were luxuries.

• June 21-30 domestic sales were up 53.39 percent, to 252,513 from 158,420 last year. There were nine selling days in the period, yielding an average 28,057 sales per day this year compared with 17,602 in 1982 when there also were nine days.

The daily selling rate for all of June was 25,698 for the domestics, up 48.01 percent from 17,363 a year earlier. There were 26 selling days both years.

Annualized sales based on third-period results were 6,893,605.

In late June, GM sales were up 44.31 percent, Ford was up 76.76 percent, Chrysler was up 58.60 percent, AMC was up 273.45 percent and VWoA was up 46.92 percent.

GM earned 51.20 percent of the period's market, Ford had 29.60 percent, Chrysler had 12.87 percent, VWoA had 2.25 percent, AMC had 3.25 percent and Honda swept up the remaining 0.83 percent.

Ford Motor Co. sales of 74,743 were its best for any of the 18 sales periods so far this year. VW's 5,668 were its strongest and AMC's 8,216 were its second best for any 10-day period this year.

Ford Division sales of 54,188 put it at the top of the heap, surpassing Chevrolet's total of 48,420 and Oldsmobile's 26,825.

• Domestic sales were up 13.64 percent in the first half of calendar year 1983. GM was up 10.24 percent, to 1,983,327 from 1,799,035 last year. Ford was up 9.31 percent, to 758,263 from 693,697. Chrysler climbed 23.67 percent, to 432,814 from 349,978. AMC more than doubled its 1982 results, up 119.90 percent to 101,120 from 45,985. VWoA was down 7.56 percent, dropping to 42,643 from 46,129, and Honda first-half sales totaled 16,861.

GM earned 59.47 percent of the six-month domestic market, down from 61.30 percent in 1982. Ford dipped to 22.74 percent from 23.64 percent. Chrysler was up to 12.98 percent from 11.92 percent. AMC was strong, going to 3.03 percent from 1.57 percent, VWoA dropped to 1.28 percent from 1.57 percent and Honda had 0.50 percent of the 1983 first-half market.

Second-quarter, 1983, sales totaled 1,878,108, up 22.42 percent from 1,534,134 a year earlier. It was the best result for the quarter since 1979 when 2,261,607 new cars were retailed. Second-quarter sales were up 28.91 percent from the first quarter's 1,456,920.

Chevy recalling 800,000 vehicles for catalyst fix

WARREN, Mich. — Chevrolet is recalling some 800,000 vehicles from its 1981 and 1982 model years so catalytic converters can be reconditioned.

Full-size, intermediate and Camaro passenger cars and sedan delivery pickups equipped with Chevrolet-built V-6 and V-8 engines are involved.

The reconditioning will eliminate the possibility that fragmented catalyst beads might restrict the flow of exhaust gases. This could reduce vehicle performance.

Chevrolet said the voluntary action is being taken in the interest of customer satisfaction, since the cars involved continue to meet federal tailpipe emission standards, even if the converter does become partially restricted.

Makers build 653,151 cars for month

June output 19 pct. above '82 total

By Mary Beth Mayer
Staff Writer

Domestic auto production in June was far above that of the 1982 month, and the second-quarter total was the highest for any quarter since the second three months of 1981.

In June, the manufacturers completed 653,151 cars, up 19.45 percent over 546,807 units built in the same month last year. Last month was the highest month of car production since June, 1981, when 712,524 units were assembled.

Production for the second quarter was 1,798,293 units, up 18.29 percent from the same period last year. It was the greatest output for any quarter since 2,032,219 units were produced in the second quarter of 1981.

During the first half of this year, the auto makers completed 3,302,571 units, up 29.37 percent from 2,554,863 built in the first six months of last year.

Breakdown for June by company was: General Motors, 59.92 percent; Ford Motor Co., 22.65 percent; Chrysler Corp., 12.75 percent; American Motors, 2.58 percent; Volkswagen of America, 1.28 percent, and Honda, 0.82 percent.

The shortened holiday week and downtime at all Ford facilities, Chrysler's St. Louis plant, AMC's Kenosha point and Honda's Marysville facility pulled last week's estimated car production down 33.18 percent to 91,022 units from 136,212 the previous week. Output, however, rose 7.14 percent from the 84,957 units completed during the four-day year-ago period.

A two-week vacation began last week at all of Ford's car assembly points, except the Edison (N. J.) plant, which closed a week earlier. Production is slated to resume July 18.

The AMC Kenosha plant and Honda's Marysville facility are also on vacation and are scheduled to resume production this week.

Also closed was Chrysler's St. Louis plant, which is preparing for the launch of the 1984 front-wheel-drive two-door models. The facility is slated to return July 18.

GM points which worked last Saturday (July 9) were Fairfax, Flint, Lansing, Leeds and Lordstown.

Three Chrysler plants, Belvidere, Jefferson and Newark, worked two daily nine-hour shifts last week.

Auto production in Canada shows 7 pct. gain for June

Canadian auto production in June jumped 7.76 percent from the year-ago month, bringing the total for the second quarter up 12.07 percent from the comparable 1982 period.

The manufacturers built 100,357 cars in June, up from 93,132 in the same month last year.

Output for the second quarter reached 295,799 units, up from 263,943 built during the second three months in 1982. It was the most for any quarter since 328,270 cars were built during the second quarter of 1978.

During the first half of 1983, the auto makers assembled 534,168 units, a gain of 16.98 percent from 456,616 built the first six months last year.

The truck manufacturers finished 53,948 units in June, down 2.34 percent from 55,243 during that month last year.

For the second quarter, the makers produced 153,864 trucks, down 2.26 percent from 157,422 last year.

There were 274,445 trucks produced during the first half of the year, down slightly from 275,778 in the 1982 period.

The auto makers scheduled 12,365 units last week, down from 17,867 built in the previous holiday week. Vacation downtime at two Ford Motor facilities cut last week's total. Output was also down 5.70 percent from 13,112 units built in the comparable 1982 week.

So far this year, the auto manufacturers have assembled 545,660 cars, a jump of 10.72 percent from 492,824 assembled in the same period last year.

• Truck production last week totaled 7,889 units, down 13.73 percent from the previous four-day week's 9,145, due to vacation downtime at Ford's Oakville facility. The total was up 13.61 percent from 6,944 trucks in the comparable 1982 week.

Year-to-date, the truck makers have completed 282,963 units, down 2.61 percent from 290,559 in the comparable 1982 period.

Ford's Oakville and St. Thomas facilities are in the midst of a three-week vacation which began July 4. Both points are slated to return July 25.

American Motors' Brampton point has been down since June 21 for a summer break. Operations there will resume July 18.

Chrysler Corp.'s Windsor car plant is retooling for the 1984 front-wheel drive T-115 van/wagon, which it will begin to produce during the first week of October.

International Harvester's Chatham and Vancouver facilities remained closed for model changeover. Operations there, idled May 23, are scheduled to resume July 25.

General Motors' St. Therese and Scarborough facilities logged eight hours of overtime last week. This week, GM's Oshawa Plant No. 2 and Oshawa truck facility will work eight hours of overtime, while the St. Therese point will work 16 hours of overtime.

Goodyear plant receives Ford quality award

GADSDEN, Ala. — Goodyear's tire plant here has received Ford Motor Co.'s Q1 Preferred Quality Award.

To be considered for the award, suppliers must have an excellent Ford quality rating and an effective quality assurance system that includes process control capability and the use of statistical control techniques.

Truck output best since 1979 for June, 2nd quarter

The domestic truck makers assembled 233,386 units during June, making that month and the second quarter of this year the highest for truck production since comparable periods in 1979.

Last month's total was up 9.65 percent from 212,837 in June, 1982. It was the most for any month since 292,897 in June, 1979.

For the second quarter, the truck manufacturers completed 631,255 units, a 7.12 percent gain from 589,279 built in 1982. It was the most for any quarter since the second quarter of 1979 when 887,948 units were built.

During the first half of this year, the makers produced 1,142,657 trucks, up 8.60 percent from 1,052,132 trucks built during the first six months last year.

Due to the shortened holiday week plus vacation at all Ford Motor Co. facilities and American Motors' Toledo plant, the truck makers scheduled only 23,421 units last week, down 49.73 percent from 46,595 units built the previous week, and down 5.63 percent from the 24,817 trucks assembled during the comparable 1982 period.

All Ford truck facilities were idle last week, starting a two-week vacation. AMC's Toledo plant is also on summer vacation and will return today (July 11).

Two shifts of Saturday overtime was scheduled last week at General Motors' Lordstown, Pontiac and St. Louis facilities.

Chrysler Corp.'s Warren point was on a daily overtime schedule last week.

Industry leaders in upbeat mood at World Congress and World Expo

Automotive News Week fosters optimism

By Matt DeLorenzo
Staff Writer

A sense of cautious optimism pervaded Automotive News Week as industry leaders from around the world gathered in Detroit to exchange ideas at the eighth annual Automotive News World Congress and to shop for hardware at the second annual Automotive News World Expo.

The generally upbeat tone of World Congress speakers combined with recent improved automotive sales figures contributed to the positive attitude, although many auto executives conceded that the industry is not out of the woods yet.

A display of vehicles outside the main hall at the World Congress perhaps typified the reasons why there was cause for optimism.

Included were Audi's Avant station wagon and Ford's Thunberbird Turbo Coupe, embodying the new European-inspired aerodynamic look. Chrysler's T-115 compact van was also displayed, showing the future course of the truck market, as was one of Nissan's U. S.-produced compact pickups.

Adding to the international flavor was an Opel Senator, and to show that the future will include limited-volume specialty makes, an Avanti was included.

• Over at Cobo Hall, the second annual Automotive News World Expo, a four-day international buy/sell trade fair, attracted nearly 12,000 engineers, designers, product planners and manufacturing and marketing managers.

More than 180 exhibitors from around the world displayed components, materials, machinery, design concepts, systems and services for the auto industry.

Some companies, both large and small, used the World Expo to unveil new technology or concepts.

Goodyear Tire & Rubber showed the recently announced air suspension system that will be used as standard equipment on the 1984 Mark VII. In addition to the air springs, Goodyear also displayed air-supported MacPherson struts.

Steven Hurt, product manager for Goodyear, said his company's display attracted "good traffic and a lot of interest."

Hurt said that while Goodyear works closely with engineers in developing such a system, World Expo affords the opportunity to have "more access to product planners, those involved in strategic planning, advertising and public relations."

He added that "when you try to sell a new product, the people who ultimately have to approve it often don't get a first hand look." World Expo affords that opportunity.

"It's a high quality show," Hurt said.

Waller Motors, a small company in Clearwater, Fla., used World Expo to introduce its exotic new X-3 engine. Francis Waller, the motor's designer, said the powerplant uses horizontally-opposed pistons to turn a "cam lobe having two opposing sinusoidal surfaces."

The small booth was busy throughout the show, Waller said. "At any given time, we had six or eight people standing around," he said, adding. "The response is fantastic."

Most of the interest came from engineers from domestic car companies, Waller said.

There was quite a bit less activity at the booth put together by the Republic of Korea. One speaker at the World Congress predicted that Korea may someday be a world leader in automotive production, yet, one of the Korean exhibitors said he didn't have too many visitors to his display.

However, the Koreans view the U. S. as an important market for their products and components, according to the exhibitor.

Helping buyers and sellers find each other at the expo was the show's Match-Maker Service. Special forms detailing the needs of the buyer or seller were posted under one of 14 categories of parts, systems and services.

The system matched the needs of buyers and sellers in similar categories and in the first few days of the show, more than 1,000 requests were taken.

Next year's Automotive News Week will begin Aug. 26, when the ninth annual World Congress convenes. The World Congress will run for 3½ days. World Expo will open Aug. 27 and continue through Aug. 30.

World Congress kickoff

Opening-night speakers

Keith E. Crain, center, Automotive News publisher and editorial director, visits with first-night speakers at the Automotive News World Congress. Philip Caldwell, left, Ford Motor Co. chairman, delivered the keynote address. Following him on the program was Edmund M. Carpenter, senior vice president, group executive — Automotive and Electrical Products, ITT Corp.

Car-truck averaging OK'd for diesel rule

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Makers of light-duty diesel cars and diesel light trucks will be able to average diesel particulate emissions starting with 1985 models.

EPA estimates that its final averaging rule — part of the Reagan Administration's efforts to ease regulatory burdens and to give manufacturers greater flexibility — could save between $50 and $111 million a year.

EPA's cost analysis assumes that by 1987, light-duty diesels will account for about 10.6 percent of total sales, 8 percent of car sales and 20 percent of light-truck sales. EPA sees average sales of both classes at about 1.3 million units for 1985-87.

But EPA has yet to decide the real level of the particulate standard and exactly what year it will take effect.

If there is a two-year delay as EPA proposed last December, — mostly to give makers of light duty diesels time to develop trap oxidizers or other control devices — then the effective date of the averaging rule — now set for '85 — will also be delayed.

This rule, like all other final rules, can be challenged within 60 days to the U. S. Court of Appeals for the District of Columbia.

This averaging proposal was one of the promises made in April, 1981, by the Reagan Administration to aid the auto industry. The specific proposal emerged in December, 1981, and

Early-1984 debut seen for GM C-cars

MILFORD, Mich.—General Motors' new C-cars may be heading for an early 1984 introduction. Lloyd Reuss, Buick general manager, told magazine writers that a preview for the C-cars is tentatively set for late November or early December. Joseph J. Sanchez, Oldsmobile general manager, said, "The C-cars are in an extensive quality verification program." The C-cars are the front-wheel-drive Oldsmobile 98, Buick Electra and Cadillac DeVille.

Ford to pay a dividend

DEARBORN. — Ford Motor Co. will pay a 30-cent-per-share dividend on common stock for the third quarter of 1983—its first dividend in seven quarters. Chairman Philip Caldwell said the dividend reflects directors' confidence the sales upturn will continue. He credited the success of the company's new products and cost-cutting for the payment.

New GMAD plant yields bumper crop

ST. LOUIS. — The new $500 million General Motors Assembly Division plant in Wentzville, Mo., has yet to turn out a front-drive Olds 98 or Buick Electra and no date has been set for Job 1. But GM has realized a return on its investment. It sold wheat from the five farms on its 569-acre spread for a yield of $14,000.

The last question in bailout package

What about Chrysler warrants?

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Chrysler Corp. apparently is interested in buying back the warrants for 14.4 million shares of stock it issued to the U. S. government as part of its bailout package, and the government has expressed an interest in selling them — but not necessarily to Chrysler.

The issue of what to do with the warrants became the last question mark left in the Chrysler bailout package after Chairman Lee A. Iacocca announced to a gathering of high-level politicos and businessmen here last week that Chrysler's government-guaranteed loans will be paid off by September. The payoff will be made from cash reserves.

Treasury Secretary Donald Regan — also a member of the Chrysler Loan Guarantee Board — said the government will not hand Chrysler back its warrants, potentially worth more than $250 million.

The Loan Board will, however, resolve the question "expeditiously," to head off stock-market uncertainty, he said.

The Loan Board would rather sell the warrants than have Congress appropriate the $187 million or so that it would take to exercise them. The government would then have to sell the stock. Such a move would mark the first time the government would enter the stock market.

• The Loan Board's decision is expected within weeks. It could decide to sell the warrants over a period of time.

Putting pressure on the Loan Board, Senator John H. Chafee, Rhode Island Republican, last week said he will introduce legislation to cut the Department of Treasury appropriation $250 million unless the government takes steps to make a profit on its warrants.

The appropriation bill is ex-

Gain over last year is fifth in a row

Early July sales increase 25 pct.

By Jenny L. King
Staff Writer

Put another plus sign before domestic new-car sales, this time for the July 1-10 selling period.

While the total wasn't spectacular compared with many of the past years, it was up 25.65 percent from the period in 1982, and this was accomplished with one less selling day this year.

Early-July sales, up for the fifth consecutive period, totaled 135,604, with all the domestic makers except Volkswagen of America reporting increases. The 135,604 total was up 25.65 percent from 107,918 a year earlier and was best for the period since 155,852 in 1980. Record sales of 214,912 were posted back in 1973.

Average sales per selling day were 19,372 this year compared with 13,490 in 1982, an increase of 43.60 percent. There were seven days this year, eight in 1982.

General Motors dealers retailed 80,135 new cars July 1-10, up 29.58 percent from 61,844 last year (up 48.10 percent daily rate). Ford Motor Co. was up 8.95 percent, to 31,673 from 29,071 (up 24.52 percent daily rate).

Chrysler Corp. reported a sales gain of 32.08 percent, up to 18,250 from 13,817 (plus 50.96 percent daily rate). American Motors' estimate was 3,650, up 102.78 percent from 1,800 last year.

• It was bad news for VWoA in early July. Honda Accord sales surpassed VW Rabbits by more than 400 units, putting Honda ahead of VW for the first time. Honda has been building Accords in Marysville, O., since the end of 1982 and began reporting sales in January of 1983. VW was down 47.62 percent for the period, to 726 from 1,386 (down 40.03 percent daily rate), while Honda reported sales of 1,170 new Accords.

GM captured 59.09 percent of the market for the period, up from 57.31 percent a year earlier. Ford slipped to 23.36 percent from 26.94 percent. Chrysler climbed to 13.46 percent from 12.80 percent. AMC held 2.69 percent, up from 1.67 percent. VWoA tumbled to 0.54 percent from 1.28 percent, and Honda picked up 0.86 percent.

All five GM makes were up for the period. Buick signed in with a 68.79-percent sales increase, Pontiac was up 57.85 percent, Oldsmobile was up 40.89 percent, Cadillac was up 21.66 percent and Chevrolet was up 3.41 percent.

As Chrysler Corp., Chrysler was up 40.66 percent, Dodge was up 39.35 percent, Plymouth was up 19.51 percent and Imperial was off 40.63 percent.

Ford was down 0.30 percent, Mercury was up 31.83 percent and Lincoln was up 35.11 percent on a year-to-year basis. AMC cars were down 41.67 percent and VW was down 47.62 percent. Renault Alliance and Honda Accord have no year-ago comparisons.

Domestic sales Jan. 1 through July 10 totaled 3,470,632, up 14.06 percent from 3,042,742 last year. Annualized sales based on the early-July results were 6,786,000.

† Estimate.

Record profits seen for industry by Keller

By Kathleen Hamilton
Financial Editor

There still are gains to be made in automotive stocks, but the time is probably past to double one's investment, analyst Maryann N. Keller told the Automotive News World Congress in her rather upbeat forecast for 1983 and 1984.

She predicted auto makers would be running at sales rates of 9.8 million cars and 3.0 million trucks by the end of the year. Her forecast for actual sales for the year is 9.0 million to 9.2 million cars and 3.0 million trucks.

For 1984, she predicted sales of 10 million cars and 3.4 million trucks.

While this recovery — which she sees lasting at least into 1985 — may not produce record production levels, it "most definitely will set sales and earnings records," Keller said.

Among the indications that sales will continue to grow, evidence from May and June that "consumers are firmly in a buying mood," not only for cars but for all durables.

A "great reservoir of demand" for cars, coupled with lower interest rates and higher levels of consumer savings compared to debt also contribute to her forecast for record sales.

• In addition, profits made from the stock market, the rise in the equity value of homes and high used-car values will encourage new-car buying, Keller said.

She took issue with those who predict the Federal Reserve Board will tighten the money supply to restrict inflation, at least until after the presidential election. The reason, she said, is that the recovery seems at this point to be affecting only consumer spending. Capital spending remains low.

As a result, there is likely to be something less than a rapid, robust, wide recovery that would require high interest rates to cool inflation, she said.

Her forecast for earnings records was supported by the richer mix of cars being sold — meaning more profits for the makers — reduced marketing costs, as fewer and less costly sales incentives are needed, and cost-cutting measures.

In addition, Chrysler will continue to benefit from tax-loss carryforwards into 1984, and General Motors and Ford Motor Co. will have their earnings boosted by investment tax credits, Keller said.

Capital spending has already peaked. Huge cash resources will allow GM to easily be self-financing, even with a 1984 dividend payout of $5 to $5.50 a share, she said.

For 1983, she forecasted GM profits of $3.2 billion ($10 a share) and dividends of $4 a share. That would be more than triple the 1982 earnings of $963 million ($3.09 a share) and nearly double the $2.40 per share dividend paid last year.

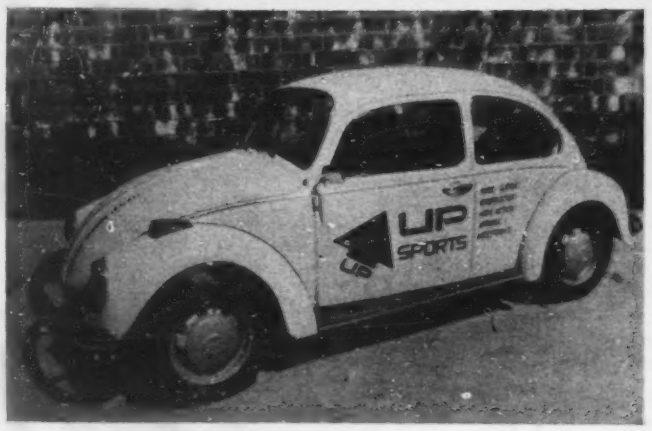
• For Ford, Keller predicted 1983 profits of $1.2 billion to $1.3 billion ($9.00 to $9.50 a share) and dividends of more than $2 a share. Ford has been losing money for the last three years, most recently $658 million ($5.46 a share).

Chrysler Corp. earnings for this year will be up $700 million (more than $6 a share), she predicted. Chrysler made $170 million last year, but would have lost money if it had not sold its defense subsidiary.

American Motors will be the only U. S. car maker to record a loss — more than $2 a share — this year, Keller said. AMC has already recorded a first-quarter loss of $1.21. Last year, AMC lost $2.85 a share.

For 1984, Keller predicted GM earnings of $14 a share, Ford earnings of $16 to $18 a share, and Chrysler earnings of about $1.1 billion, although she qualified that last prediction by saying Chrysler's tax-credits muddy the forecast. She said the company probably will exhaust these tax credits sometime in 1984 to again become a tax-paying corporation.

Keller, who recently left Paine Webber Mitchell Hutchins to become a money manager for Vilas-Fischer Associates, had been ranked the country's top auto analyst for four consecutive years by Institutional Investor.



Beetle Boards return

Peoples Car Co., Solana Beach, Calif., is offering Mexican-made VW Beetles to companies for ad purposes. Modified to meet U. S. standards, they lease for $200 monthly, including graphics, with option to buy after two years.

Exotic engine draws World Expo crowd

By Matt DeLorenzo
Staff Writer

Build a better mousetrap and the world will beat a path to your door, or so the old saying goes.

Francis Waller, designer of the Waller Motor, which made its debut at the second annual Automotive News World Expo, found the auto world beating a path to his booth to check out his new powerplant.

Waller, a retired civil engineer who used to dabble in dirt track racing, said there is nothing radical about the internal combustion part of his motor.

"It still has pistons and valves and other things that a conventional engine has," he said. Where it differs is how that power is translated into rotating output.

"All I've done is replace the crankshaft with a high-leveraged cam," Waller said. "The result is a lightweight engine that produces a lot of power."

The 0.9-liter prototype on display at World Expo has produced 40 pounds-feet of torque at 1,100 RPM in preliminary tests. High torque at relatively low RPMs makes the motor ideal for automotive, light aircraft and marine applications, he said.

Waller's prototype is essentially a six-cylinder horizontally-opposed air-cooled engine. Each bank is arranged in a triangular fashion. Configurations can range from four up to as many as 12 cylinders, Waller said. Later models will also incorporate water-cooling and fuel injection.

The cam which replaces the crankshaft in Waller's engine uses a lobe "having two opposing sinusoidal surfaces." In essence, the surface is similar to a sine wave wrapped around a shaft.

The piston rods ride on each side of the cam, three from one bank on one side and three from the other bank on the other side. Each rod is fitted with a roller bearing.

Waller said the constant linear upward and downward pressure on the cam with no side-to-side movement as in a conventional engine with a crankshaft, reduces engine wear and the pressure needed to "turn the engine over."

The sine wave on the cam has four lobes which means each cylinder in the four-stroke engine fires once every revolution rather than a conventional engine which may have only three cylinders firing on any given revolution. The result is more power.

Waller said by changing the cam and using lobes that provide greater leverage, he can increase the displacement and the power of the engine. A larger cam he's already developed can be fitted to the prototype boosting the powerplant to 1.2 liters and increasing the compression ratio from 7.2 to 1 to 9.3 to 1.

The same engine, with the use of still a larger cam, can be increased to as much as 1.6 liters.

By replacing the crankshaft with the cam in his concept, Waller said he was able to save considerable weight. He estimated that the 1.2-liter version would weigh approximately 160 pounds.

Waller said the concept will work for diesel engines as well and added that he envisions engines as large as 800 cubic inches being built incorporating his idea.

The engine has been under development for four years. Waller said he does not see himself becoming an engine builder. He would rather license the concept once final testing and development is concluded.

Waller, whose father was an inventor, said he would rather stick to his shop working on other ideas. His next one, which was started before the engine, is a fuel-injection system. That project was put on hold "because this one had a better potential."

Car-care center to rise in Oregon

PORTLAND, Ore. — A new $1.2-million Boones Ferry Car Care Center will be built here in the Tualatin - Lake Oswego area by Bob Hanington, owner of Lake Tire Co., as "a shopping center with approach to car care."

The complex will contain three separate single floor buildings containing approximately 18,000 square feet.

Completion of the project is scheduled for December.

Dodge Caravan ready to roll

The Caravan compact van, the first of a number of smaller such vehicles due on the market in the next two years, will make its debut in Dodge dealers' showrooms this fall. The Plymouth version, to be called Voyager, will bow at the same time in Chrysler-Plymouth dealers' facilities.

Campana forecasts growth for minivans

By Kathleen Hamilton and Mary Beth Mayer

Chrysler Corp. has been saying all along it expects to sell 150,000 to 200,000 of its forthcoming minivans/wagons in 1984, when it has the market to itself.

But what about 1986, when General Motors and Ford Motor Co. and possibly a Japanese maker or two enter the fray?

Given a 10-million-car year, Chrysler Marketing Vice President Joseph A. Campana fully expects the company to maintain that sales level.

He told the Automotive News World Congress the entire market for this type of vehicle would be about 500,000 —50 percent sedan intenders, 25 percent station wagon intenders.

As for Chrysler's share in 1986, Campana said, "We are current leaders in wagons derived from vans, at 40 percent of the market. We should be able to achieve between 30 and 40 percent of the market for this vehicle."

That would mean 150,000 to 200,000 units. At full capacity,

Traveling cavalcade to tour U. S.

Volvo, White hail trucking progress

WASHINGON. — As a salute to half a century of trucking progress, Volvo White Truck Corp. and Fruehauf Corp. will co-sponsor a "Cavalcade of Trucking" that will range the length and breadth of the nation for a year as a public relations project of the ATA Foundation.

The 48-foot FBX wedge van supplied by Fruehauf will contain five dioramas and numerous pictures and other memorabilia documenting the progress of the trucking industry since the 1930s.

The White integral-sleeper conventional being built specifically for this mission, will incorporate the latest advances in heavy-truck technology and fuel efficiency.

The countrywide tour will begin in New Orleans in October, coincidental to the convention that will mark the 50th anniversary of the American Trucking Assns., Inc., and the beginning of the organized trucking industry in the United States.

At many stops where the truck will be exhibited, members of the American Truck Historical Society will display vintage trucks from the 30s and 40s alongside the most up-to-date White tractor and Fruehauf trailer.

The Historical Society also has loaned some of the memorabilia for the displays, and at the conclusion of the tour, Fruehauf has indicated it will donate the fully-equipped trailer to the society.

John P. McGill, managing director of the ATA Foundation, said the Cavalcade has great potential as a public relations emissary for the industry.

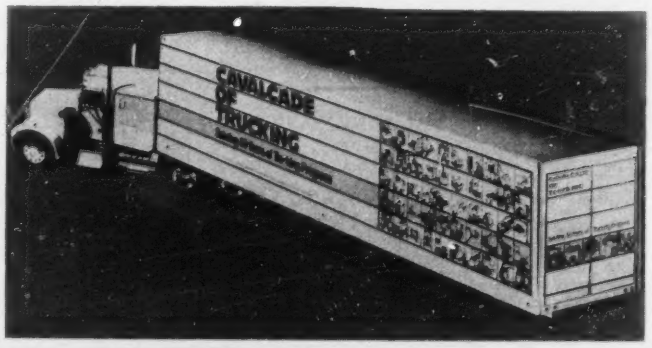
"When we begin to plot the itinerary, it will include a few major trucking events, such as the International Truck Show," he said. "But a majority of the schedule will comprise grass roots stops at state fairs, county fairs, shopping malls and important public events. We also plan to involve local media at every stop."

Members of the ATA's Public Relations Council, representing carriers and supplier industries, have agreed to work with the exhibit at the various stops and will assist in media involvement, he noted.

According to McGill, the Cavalcade concept originated with Patricia McCullough, former public relations manager for Volvo White.

"It was enthusiastically endorsed by Jim Bianchi, PR director at Fruehauf, and marks the first time in the history of the ATA Foundation that two companies have collaborated on a single project," he said.

Jack Thiessen, veteran trucking publicist and president of PR Counselors, Toledo, O., has been selected by the sponsors to manage the development of the project and the national tour.



A long 'one for the road'

A year-long tour of grass-roots America is planned for "Cavalcade of Trucking," a mobile museum that will chronicle 50 years of trucking progress as a project of the ATA Foundation. It is co-sponsored by Volvo White Truck Corp. and Fruehauf Corp.

truck industry news

First-half total up 11.6 pct. over '82

Sales hit four-year high

Retail sales of new trucks of all types in the U. S. in June and the first six months of 1983 reached their highest levels in four years.

In the January - June period, according to preliminary reports, franchised dealers and factory outlets sold 1,493,485 units, an increase of 11.6 percent over last year's 1,338,495.

The six-month total this year was the highest since the like period in 1979, when 1,913,409 new units were retailed.

In June, new-vehicle sales topped the 300,000 mark for the first time since May, 1979. The month's total was estimated at 301,588 units, up 38.7 percent from last year's 217,422 but 5.7 percent below the 319,660 sales in May four years ago.

In 1979, sales exceeded 300,000 units in the first five months, slipping below that mark in June. If sales continue at the June rate in the final six months, the 1983 total would top the three-million mark for the first time since 1979.

• Light trucks, as usual, were the only ones showing an improvement over a year ago, with the compact vehicles setting the pace.

In the January-June period, 1,405,838 new light trucks were retailed in the U. S., an increase of 13.5 percent over last year's 1,238,104 units.

Six-month sales of mediums were down less than one percent, from 22,942 units a year ago to 22,813. Heavies were off 16.3 percent through June to 64,834 units, compared with 77,449 in 1982.

In the first half, 512,290 compact trucks were retailed in the U. S., an increase of 36.3 percent over last year's 375,919 and a new high for these vehicles.

The small domestic trucks continue to increase their share of this market, although all of the imported makes with the exception of the captive vehicles scored impressive gains over last year.

Through June, the domestic compacts had 58.8 percent of the market with 301,242 sales. The total was 70 percent higher than last year's 187,111, which gave the domestics 49.8 percent of the market.

Six-month sales of the imported compacts, both captive and non-captive pickups, totaled 211,048, a gain of 11.8 percent over the year-earlier 188,808.

This year through June, the imports accounted for only 41.2 percent of the compact-truck segment, compared with 50.2 percent in the like period in 1982.

• Both domestic and imported compacts had great months in June, although the latter suffered a sizable drop in market share.

During the month, sales of the domestic compacts totaled 68,395

Quality equal to Japan claimed for U.S. Nissan

By Jack Walsh
Truck Editor

The quality of the compact Nissan pickup trucks being built in the U. S. is as good as that of the imported vehicles and is a "direct reflection of teamwork, trust and open communication" at Nissan Motor Mfg. Corp. U.S.A.

That was the gist of comments last week by Marvin T. Runyon, the company's president, at the eighth annual Automotive News World Congress.

"We shipped several of our pre-production trucks to Japan for evaluation, and they found the quality equal to or, in some respects, better than the quality of vehicles imported from Japan," he said.

Production of 1983½ models began in the giant, all-new $660 million manufacturing and assembly complex in Smyrna Tenn., June 16, two months ahead of schedule and a little more than two years after the groundbreaking.

At the start, the company — a subsidiary of Nissan Motor Co., Ltd., Tokyo — turned out six units a day, and Runyon said production will accelerate gradually over the next year.

"We expect to be producing around 7,500 units monthly by the end of this year and up to 10,000 monthly by mid-1984," he said.

"Trucks will continue to be manufactured at the Kyushu plant in Japan and will provide the difference between our capacity and demand, thus providing security for our American employes during the valleys of demand that do occur."

He noted that the parent firm's other U. S. subsidiary, Nissan Motor Corp. U.S.A., hopes to sell 129,000 compact trucks during the current fiscal year which ends in September.

"They have already sold over 96,000, which is up 38.5 percent from the previous year to date," he added. "All consumer research on our new mid-year model indicates that it is far superior to its predecessor, and, in fact, more than competitive with any of the existing domestic and import products."

Runyon called the proposed domestic-content legislation a "critical problem," and added:

"If passed in its present form, it will seriously jeopardize our Tennessee operation along with many U. S. suppliers who are not capable at the present time of producing components without some foreign content."

• Currently, about 41 percent of the U. S. Nissan's parts and components are sourced in the U. S., Runyon said, higher than the 38 percent which the firm originally had estimated at production startup.

"Our objective is to increase our U. S. sourcing as rapidly as possible," he added.

Runyon explained that materials sourced in the U. S. must be equal to or better than the quality of those imported from Japan, costs must be equal to or lower than the offshore items and delivery performance must

Strong rebound is predicted for trucking industry

In spite of the many problems which have plagued the trucking industry since the late '70s, it will "weather the storm . . . because America depends on trucks," Lana R. Batts, managing director, American Trucking Assns. Research & Policy Analysis Division, told the eighth annual Automotive News World Congress.

"Trucks move three out of every four tons of freight, and serve 41,000 of America's communities not served by rail," she said.

Deregulation, "awesome lia-

world news briefs

German output slips

Passenger car production in West Germany in the first quarter of this year slipped by 7.8 percent (913,600) compared with the same period one year earlier. Commercial vehicle production was down 4.3 percent (68,700).

Turnbull leaves Talbot

George Turnbull is to leave his position as chairman and managing director of PSA's Talbot Motor Company at the end of this year. However, he has been re-elected president of the Society of Motor Manufacturers and Traders for a second year.

Opel hits 20 million

Adam Opel's 20 millionth vehicle — a Senator sedan — was produced in May. Its best sellers have been the upper medium Rekord (6.9 million) and lower medium Kadett (6.5 million).

Dutch Volvo goes gas

Volvo Car, of Holland, is to purchase Vialle, one of Europe's largest manufacturers of LPG (Liquified Petroleum Gas) conversions for passenger cars. An LPG option is a significant sales factor in the Dutch and Italian markets.

Jaguar tackles Germany

Creation of a new and separate company in West Germany is the latest move by Jaguar Cars to establish itself in the home market of its two chief competitors, BMW and Daimler-Benz. Jaguar sales in Continental Europe rose 48 percent (to 1,476) in the first five months of 1983.

French buying foreign

Import levels in France continue to rise. In the first four months of this year the share of foreign-made new cars amounted to 32.7 percent, compared with 27.8 percent one year earlier. The total market declined by 2.5 percent to just under 693,000.

4x4 for T2

Volkswagen's Type 2 Transporter van is to be offered with a four-wheel-drive option. VW's supplier is Steyr-Daimler-Puch, of Austria, which is also supplying 4x4 units for Fiat Pandas (around 11,000 a year).

GKN goes for the record

British engineering group GKN is one of the sponsors of Thrust 2, in which Richard Noble will make his third attempt at the World Land Speed Record. The location for this month's runs is Black Rock Desert, Nevada. The target is 622-MPH.

Economical engine

Ford of Europe's new 1.6-liter diesel is reputed to be very economical. Leaked figures suggest it will return the equivalent of 58-MPG (U.S.) at a constant 56-MPH when fitted to two of the three new models in which it will be used.

UK production up

The SMMT reports that UK car production in the first five months of this year amounted to 445,000, compared with 403,000 a year earlier. May output (102,000) was the highest for four years.

Sinclair's three-wheeler

Inside information is that Sir Clive Sinclair's proposed electric vehicle will be a three-wheeler in which all wheels steer and the body tilts in corners. Sinclair, head of a very successful electronics company, has stunned competitors with low retail prices. The same principle is expected to apply to any vehicle he makes.

This year's best sellers

Ford of Europe believes it has Escort and Sierra topping the continent-wide list of best sellers for the opening quarter of this year—a significant factor in Ford's overall market leadership. Its provisional returns on a model by model basis are: Escort, 132,000; Sierra, 118,200; Opel Kadett/Vauxhall Astra, 118,000; VW Golf, 116,000; Renault 9, 110,500; Opel Ascona/Vauxhall Cavalier, 106,600; Renault 5, 103,200; Ford Fiesta, 98,900.

Golf getting ready

Volkswagen will release full details of its new Golf II on Aug. 10. The car will go into production at Wolfsburg after the summer shut-down — but will not be made in the U. S. until the following year.

Bedford — by way of Japan

Bedford will hit 80 percent local content when production of the Isuzu-designed WFR one-ton van gets fully under way. Output will begin next year, as part of a $110 million investment to improve Bedford's UK facilities and commercial opportunities.

Bedford prepares Isuzu-designed truck

GM invests $110 million in British project for one-ton van

The $110-million investment being put into Bedford by General Motors is to introduce a Japanese-designed vehicle into the production lines at Luton, England.

Starting next year, Bedford will begin producing the WFR, a one-ton panel van which originated with Isuzu, of which GM owns 34.2 percent.

It will fit between the small Astra, a van derived from the Opel Kadett passenger car, and Bedford's own CF van, which is considerably larger.

John T. Battenberg III, Bedford Commercial Division's general manager, said the one-ton van market in Europe totals around 250,000 units a year.

But much of the competition stems from Japanese imports (Toyota, Nissan, Toyo Kogyo and Mitsubishi). European-made vans tend to be larger and heavier — like the CF.

The WFR is about 13 percent smaller and about 10 percent narrower than the smallest version of the Bedford CF.

Bedford believes it will avoid anti-Japanese sentiments — in particular in France and Italy — because of the high local content which is planned.

"The new Bedford van will have major UK content, which, it is planned, will rise to 80 percent when full volume production is achieved," Battenberg said.

Bedford's content will initially include all sheet metal, hard and soft trim, seats, glass, fuel tanks, exhausts, wheels, tires and other trim. Further substitution with locally sourced components will be made, according to Bedford.

The investment will go into improving Bedford's van facilities at Luton, including modernization of body, trim and final assembly lines. The latest in body protection systems, known as ELPO, will also be installed.

Bedford will sell the vehicle in the UK. In the remainder of Europe it will be sold alongside other Bedford and Isuzu products by GM's recently formed Convesco sales organization based in West Germany.

Donald J. Atwood, vice president and group executive in charge of GM's worldwide Truck and Bus Group, reports that the investment is additionally "in preparation for world vehicle projects of the future."

Bedford has been separated from the Vauxhall passenger car operation, from which it was created in the 1930s, and is now part of the World Truck and Bus Group with headquarters in Pontiac.

Another bad year for trucks

As Europe's export slide continues

The European truck industry faces a third year of declining output as the collapse of exports to the Middle East and Africa which began during 1982 continues, forecasts DRI Europe.

Exports of trucks (over 3.5 tonnes) beyond Europe will decline by almost 30 percent this year, dragging production down by a further 10 percent despite a modest improvement in the European domestic market.

DRI Europe's look at the European truck industry up to the end of this decade provides forecasts of registrations, production, use and weight - limit sectors for eight European countries.

It believes that a limited recovery will begin in Europe this year, but with economic growth in the main economies averaging less than one percent more solid recovery will be delayed until 1984-85.

With faster economic growth in these years underlying replacement will at least be translated into improving sales, says DRI.

But, it forecasts that the number of trucks on the road in Europe will barely increase across the next decade. The higher demand for road haulage will be met by still increasing numbers of heavy trucks.

The peak demand of the late 1970s will not be surpassed during this decade, the survey believes.

In the medium term the industry will be increasingly dependent on European sales, both because major markets develop indigenous production and because there will be no repeat of recent oil-induced export booms.

DRI predicts that exports beyond Europe, as a percentage of production, will fall to 44 percent by 1985, compared with 56 percent last year.

Volvo is big in many fields

Volvo Car Corp. is part of Volvo AB, Sweden's leading export company, accounting for approximately 11 percent ($2.5 billion) of the nation's total by value.

Volvo AB's established activities (passenger cars, trucks, buses, marine engines) have been augmented in recent years by developments in the fields of energy, food, compressed air equipment (Atlas Copco) and forestry (Stora Koppaberg). Its sales last year were equivalent to approximately $10 billion, up more than 50 percent over 1981. Income before allocations and taxes topped $300 million. There were 75,100 employes at the end of 1982, 56,700 in Sweden.

Volvo Car Corp. is owned 85 percent by Volvo AB and 15 percent by Renault, which has an option to increase that to 20 percent by 1985. VCC has a 30 percent interest in Volvo Car BV of Holland, which makes the 300-series cars. The other 70 percent is held by Dutch state interests.

VCC production totaled 227,700 in 1982 including vehicles made in Belgium, Canada and other countries. That was up more than 8 percent over 1981.

Last year the U. S. was the leading car sales area for Volvo (73,100), followed by Sweden (57,500) and the UK (51,700). So far this year second and third places are reversed.

Worldwide Volvo sales last year were 317,000 compared with 290,000 in 1981.

BMW 524

First diesel from BMW

And new engine looks like a pacesetter

By Richard Feast
European Editor

As a company committed to advanced engineering, it was inevitable that BMW's first foray into the diesel market should be a pacesetter.

As Dr. Karlheinz Lange, head of engine development, points out, the company's new turbo diesel is more powerful, lighter and more economical than any equivalent opposition.

The 525 td sedan is the fastest production car of its type and the one with the best acceleration.

In other words, the development is one which BMW's competitors will have to take very seriously indeed. BMW's declared aim is to offer the turbo diesel power unit as original equipment to other auto makers.

Ford Motor in the U. S. is one customer. Starting in September it will take a total of 190,000 units over a three-year period, to be fitted initially in the Mark VII.

BMW will, of course, use the turbo diesel. Hans Erdmann Schonbeck, board member responsible for sales and distribution, reckons it will account for around 20 percent of 5-series production.

At current rates, that will be around 25,000 units a year.

Both these requirements are well within the present limits of the new BMW Motoren factory in the Austrian town of Steyr.

The factory makes three BMW six-cylinder engines—M1 2-liter gasoline, 2.7-liter Eta and 2.4 turbo diesel—at a rate of 150,000 a year.

However, the plan is to double that capacity to 300,000 by 1986. To some extent it will replace engine-building capacity in the overcrowded Munich location. There is also the expectation that Steyr will produce a new generation of gasoline engines at that time.

But that expansion also occurs at a time when the Ford contract is just running out.

BMW Motoren is a wholly-owned subsidiary of BMW AG, which bought out its original Steyr-Daimler-Puch partner in February last year. The company is almost entirely Austrian, including the whole board of management under chairman Dr. Robert Buchelhofer.

Explains Ing. Rudolf Aita, board member responsible for production: "We are part of a new BMW concept. We have the task from the parent company to sell to customers all the engines which are produced in BMW, especially those produced here (in Austria) and especially the diesel."

BMW officials are secretive about possible customers, but the auto companies without diesel programs of their own these days are very thin on the ground. Ford could continue buying from BMW, but beyond that it is difficult to imagine which companies are going to need to buy-in reputedly expensive turbo diesel units from BMW.

Steyr has a long tradition of metal working. The town is one thousand years old and served as an armorer for the Austro-Hungarian Empire.

The original plan was that the engine factory would be jointly owned by BMW and Steyr-Daimler-Puch, the four-wheel-drive, commercial vehicle and military contractor.

Ground-breaking on the site began in the middle of 1979, and first engines began to flow in the middle of last year.

By that time, though, BMW had taken full control, and had dropped out of a more long range plan to develop a direct injection diesel with SDP.

The factory represents a $275 million investment—with an additional $160 million to be spent on the 1986 capacity increase.

It employs 1,000 people, a number which will double when the development is complete. It includes 120 development engineers, employed in a $14 million R&D center said to be the most modern of its kind in the world.

Flexibility of production between the three engine types is the key. Watching cylinder blocks moving down the same line together, it takes an expert eye to pick a diesel from an Eta from an M1. (The diesel is less than half an inch taller.)

Indeed, Eta and diesel engine programs were run in parallel from the beginning. BMW made the decision to do the dual project in 1976, and presented the engines in 1978. The low-revving, high-torque Eta gasoline engine preceded the diesel into production by about a year.

The turbo diesel has a capacity of 2.4 liters. Power output is 115-HP and torque is 152 pounds feet at 2,400-RPM.

BMW admits that the relatively high outputs were prompted by Ford, which wanted the unit for its 4,000-pound Lincoln. A BMW official said: "That's about the weight of our 7-series, and we would not put that engine into that car."

Instead, BMW's first use is in the 5-series, which in diesel form weighs under 2,900 pounds. It goes a long way towards explaining the spritely performance of the German car.

A top speed of 112-MPH (manual) is quoted, together with acceleration from rest to 62-MPH in 12.9 seconds. They are statistics which bring a whole new dimension to diesel car driving.

BMW quotes fuel consumption on the ECE cycle (56-MPH, 75-MPH, urban) with the equivalent of 45.2, 33.6 and 26.1-MPG.

Transmissions are either five-speed manual or ZF's very efficient new four-speed automatic.

Hans Erdmann Schonbeck sees the current easing of diesel demand as nothing more than temporary. He believes that diesels will account for 10 percent of total U. S. sales by 1985, and 15 percent in Europe in the same period.

Key European markets will be in West Germany, Italy, France, Belgium and the Netherlands. The car is now going on sale across Europe and will be exported to the U. S. from the spring of next year.

Carpenter details two major trends in auto industry

A new environment for suppliers

By Matt DeLorenzo
Staff Writer

As the auto industry continues to change, suppliers will have to adapt to new ways of doing business in order to remain competitive, Edmund Carpenter, senior vice president of ITT Automotive Products Group, told the first-night audience at the Automotive News World Congress.

Two trends that are dictating the path both manufacturers and suppliers will travel in the future, according to Carpenter, are larger production of fewer model families and a greater need for product differentiation within those models.

Both trends necessitate changes that will mean either success or failure, he stressed.

Looking at the first trend, larger production of fewer models, Carpenter said the trend "is driven by the need for cost reduction in order to retain competitive pricing."

"The need for cost reduction in turn leads to international procurement of components," he said. "As they strive to be competitive the OEMs show little reluctance to cross national boundaries once the economics are favorable."

Higher production of fewer models is also responsible for a move toward sole sourcing of specific components.

"This provides higher, and therefore, more-cost-effective volumes to suppliers," Carpenter said.

As manufacturers strive to build more cars in fewer model families, Carpenter said there is pressure to go for shared investments and joint ventures. "The OEM's objective here is clear -- each partner could not produce as economically on a stand-alone basis."

• The result, according to Carpenter: "World production is becoming a reality. It is not yet the much-heralded world car, but the industry is already taking a worldwide approach to its design, sourcing and marketing objectives.

"As was said at a recent industry convention in Europe, the world car refers really to a business concept rather than to any one specific vehicle. But most importantly, another speaker summarized it as follows, 'There are no world cars, only world components made on a vast scale. This is the real crux of the world car concept.'"

Carpenter said the first trend is responsible in part for the second — the need for product differentiation within models. As manufacturing and sourcing become more universal, product content becomes more important in distinguishing one car from another.

An important factor impacting these two trends, Carpenter said, is national interest. Both trends call for a global approach to supply and manufacture.

Yet, he said, "any industry operates within a series of individual national environments. Each national government exercises its own strong influence over what companies can do and how they try to do it."

Carpenter said this impact is felt several ways. Countries can protect those industries felt to be vital to the well-being of their economies through tariffs and restrictions. In addition to protecting their own industries, countries also view balance of trade as another national interest.

"This calls for assistance from the auto industry, which is often a significant source of deficit or surplus, as the case may be," Carpenter explained. "For many countries, foreign earnings from car and component sales help finance the imported energy bill."

• Transportation policies are also in the national interest and individual countries' approach to those policies affect the viability of the automotive industry within those boundaries.

"Together with speed limits and other regulations, they all tend to foster differences among industry and market conditions from country to country," Carpenter said.

National interests aside, Carpenter said the implications from the two trends are many.

"Obviously, there will be fewer, but very large contracts for the supply of components and those contracts will be longer in duration," he said. "For the supplier, this means that it is fine if you win them. But if you don't, you may have to shut down a lot of capacity."

Larger contracts also mean greater research and development commitments in order to win those accounts.

"Much of it (R&D spending) is before he knows whether the contract is won or lost," Carpenter said. "It naturally favors companies with the financial resources to sustain such commitments in the face of potential failures."

Carpenter said the larger contracts also mean closer relationships with manufacturers in order to minimize the risks for both parties.

"OEMs need to evaluate more carefully the management strength and financial resources of their sole suppliers for large contracts, over and above the depth of their technology and manufacturing expertise," he said.

Carpenter said on the other side, "suppliers will evaluate their OE opportunities more carefully. They have to scrutinize volume projections and make more thorough independent analysis of the likely success of car models."

One threat to global sourcing by component manufacturers, he said, is a trend toward in-sourcing that may result from joint ventures on the part of OE manufacturers.

"In the face of the threat of more in-sourcing, the traditional defenses of the independent component makers remain unchanged," he said. "He has two fundamental choices: Either provide proprietary technology content not possessed by captive sources, or be the lowest cost manufacturer."

As for product differentiation within those few car families, Carpenter said "a key ingredient here is flexibility in production and in responding to individual requirements of manufacturers. Inevitably, suppliers of option components will be more vulnerable to fluctuations in market trends reflected in sales performance of individual model lines."

U. S. Nissan claims quality equal to that in Japan

Continued from Page 14

be tops to avoid excessive inventory expenses.

Retail prices of the Nissan trucks built in the U. S. will not be any lower than those for the imported models on which a 25 percent federal duty is paid, he said.

"Labor costs in the U. S. are about 80 percent higher than those in Japan, so prices won't be affected by the relief from the 25 percent duty," Runyon explained. "Also, we still have to pay a 4 percent duty on parts and components which we import."

Runyon dwelt at length on Nissan Motor Mfg.'s non-union work force, and the benefits to both employes and the company.

• He noted that teamwork and group decision making are stressed repeatedly in the company's management philosophy.

"We began with an initial survey of all employes and followed that with workshops for small groups, where we explained how participative management could work," Runyon said.

"We solicited everyone's ideas about how we could make it work in our particular situation and everyone contributed. After many months, we came up with a statement of philosophy which creates a value system that is a universal bond among all our employes.

"It states that our one and only objective is to produce the highest quality truck sold in North America," he said. "In that document, we state that people are our most valued resource, and that all aspects of our business should reflect the highest standards of dedication and ethics."

The company's wage and benefits programs are generally comparable to the American auto industry, Runyon noted.

From the beginning, he said, Nissan has pledged to make company and employe goals as compatible as possible, striving to maintain a "companywide atmosphere of mutual cooperation."

"We feel that the unionization of our employes would not be in the best interest of either the employes or the company," Runyon said. "We honestly believe that our employes do not want or need a union or any other third party to speak for them."

He observed, however, that the "verdict is still out on how successful we will be in doing the many things we have undertaken."

Lynch honored

MANCHESTER, Conn. — Michael B. Lynch, president of Lynch Motors Inc. (Toyota-Pontiac), has been elected an incorporator of the Manchester Memorial Hospital.

Truck sales in first half are highest since 1979

Continued from Page 14

units, up 121.4 percent over the year-earlier 30,891. The imports were up 39.6 percent, from 29,622 in June a year ago to 41,349.

The domestics accounted for 62.3 percent of the small-truck market in June, compared with 51 percent in the same month last year. The imports' share dropped from 49 percent to 37.7 percent, their lowest ever.

Sales of the compact trucks, domestic and imports, topped the 100,000 mark in June for the first time. The total was 109,744 units, an increase of 81.4 percent over last year's 60,513.

A big June enabled Ford to replace Chevrolet as the industry's No. 1 truck retailer at the halfway point. Ford dealers sold 100,097 units during the month, up 31.6 percent over last year's 76,059 vehicles.

Through June, the Ford total was 475,523, an increase of 13.5 percent over last year's 418,849 and more than 3,000 units higher than Chevrolet's six-month count.

• Chevrolet dealers retailed 93,953 vehicles during the month, a gain of 52.1 percent over the previous year's 61,761. The six-month total was 472,274, up 7.5 percent from the 439,508 units sold in the first half of 1982.

Dodge and Chrysler-Plymouth dealers sold 27,874 light trucks during the month, an increase of 19.8 percent over the year-earlier 23,270. Through June, the count was up 4.5 percent, from 131,482 units last year to 137,409.

GMC reported 25,294 retail sales in June, 31.5 percent higher than the 19,237 sold in the same month a year ago. The six-month total was up 6.2 percent to 132,013 units, compared with 124,250 a year ago.

In June, sales of four-wheel-drive Jeep vehicles totaled 7,184 units, up one percent over the year-earlier 7,080. Through June, the count was 35,924, an increase of 11.2 percent over the 32,156 units retailed in the first half of 1982.

Volkswagen dealers sold 482 compact pickups in June, off 42.4 percent from the year-ago 837. The six-month count was down 54 percent, from 7,129 units last year to 3,278.

• Impressive June and first-half gains were reported by all of the distributors of the non-captive imported pickups.

Toyota dealers sold 17,160 units during the month, up 79.2 percent over the year-earlier 9,578. Through June, the total was up 23.3 percent to 79,358, compared with 64,344 in 1982.

June sales of Datsun-Nissan pickups were 88.8 percent higher than last year, 12,684 versus 6,718. The first-half count hit 60,700 units, an increase of 37.3 percent over the year-ago 44,197.

During the month, Mazda dealers retailed 5,178 vehicles, a gain of 74 percent over last year's 2,976. The six-month total was 83.7 percent higher, from 18,094 in 1982 to 33,245 units.

Isuzu dealers sold 2,206 units in June, an advance of 44.7 percent over the previous year's 1,525. The total through June climbed to 11,125 units, up 29.4 percent over the 8,599 retailed in the like period a year ago.

June sales of the Mitsubishi compacts, which made their debut in the U. S. market last fall, totaled 689 units and brought the six-month total to 3,966 vehicles.

Chevy for Sylvester

HIGHLAND, N. Y. — M & S Chevrolet Inc., has been formed here by Michael A. Sylvester.

With Ford on vacation, GM builds 82 pct.

107,838 cars assembled for week

By Mary Beth Mayer
Staff Writer

Last week's domestic car production rose 21.50 percent above the total of the previous holiday-shortened week.

Output last week was slated at 107,838 cars, up from the prior week's 88,758, and up 17.71 percent from the 91,610 built in the year-ago week.

Without competition from the vacationing Ford Motor Co. facilities, General Motors produced 82.82 percent of the cars last week.

Breakdown for the week by other companies was: Chrysler Corp., 13.72 percent; American Motors, 2.16 percent, and Honda, 1.30 percent.

Year-to-date, the makers have assembled 3,516,432 automobiles, a 21.72 percent gain from last year's 2,888,880.

Three GM points closed at the end of last week for model changeover. The Detroit plant will be closed until Aug. 22, Flint's B and C lines will be down until Aug. 8 and Willow Run will be back to work Aug. 15.

Volkswagen of America's Westmoreland plant began a three-week shutdown for model changeover last week.

Two companies return to work this week and two others resumed production last week.

AMC and Honda worked last week after summer vacations.

Chrysler's St. Louis point returns this week after three weeks of model changeover in preparation for the launch of the 1984 front-wheel-drive, two-door models.

Ford facilities are back at work today (July 18) after two weeks of vacation.

Saturday overtime was scheduled last week at GM's Arlington, Lansing and Flint G-line points. Working daily overtime were Chrysler's Belvidere, Jefferson and Newark points.

Auto industry's turnaround is charted by Caldwell

Continued from Page 2

convinced we are destined for modern-day oblivion."

Caldwell said there are those in the country who, rather than create an environment in which the U. S. auto industry can thrive, would "allow our basic wealth-producing industries — including the automobile industry — to atrophy. They are content to turn their sights toward what has been described as the post industrial society.' "

That society, Caldwell explained, would have a large percentage of the workforce shifting to low-paying, low-skilled and low-productivity jobs in service industries.

"Well, I ask, are we prepared to make this transition and accept its consequences?" he said. "Are we willing to shrink our market and our standard of living as we reduce our capacity to produce competitively and our capacity to buy the goods we do produce?

"Will we be content to be virtually dependent — whether in peacetime or time of emergency — upon imports for our steel, machine tools, electronics, cars and trucks and our self defense?"

Caldwell emphasized that "there is no record of any major country becoming, or remaining, a greater power by relying upon service industries. To the contrary, every emerging country I can think of has — first and foremost — sought to establish a sound manufacturing and industrial capability."

The Ford chairman said several conclusions on the importance of the automobile industry stand out for him:

1. "The best hope for a strengthening world economy is a recognition of the crucial and unique role that manufacturing industries, in general, and the automotive industry, in particular, play," he said.

2. "Ours is still an automotive world and will continue to be for as far into the future as we can see."

3. "The automobile industry is a vital element of the economic and military security for both developed and developing countries the world over."

4. "The continued success of the automobile industry depends upon rational, coherent governmental policies that control it."

5. "Finally, the internationalization of automotive competitions portends some winners and some losers in the future automobile global sweepstakes."

On that last point, Caldwell said the private sector cannot do it alone for the industry in this country.

He said, "What is most needed, in my opinion, is a vision of the future, a national consensus among labor, management, academia and government, a long-term strategy that will restore our economy and our strength so that we can be competitive on the worldwide stage."

Chevy signs McGarrity

ANDREWS, Tex. — Chevrolet has franchised Michael J. McGarrity.

Truck production 29,093 for week; Ford back today

With Ford Motor Co. facilities on vacation, last week's domestic truck output was targeted at 29,093 units, up 24.38 percent over 23,390 built during the previous holiday-shortened week.

Last week's total was 12.38 percent above the 25,889 trucks assembled in the year-ago period.

Year-to-date, the makers have built 1,203,874 units, up 8.50 percent over the 1,109,600 completed in the 1982 period.

After a two-week vacation, American Motors' Toledo Jeep plant reopened last week with the start of 1984 model output. The first new Jeep vehicle in 20 years — the Jeep SportWagon — was assembled last Friday (July 15).

Ford assembly workers return to work today (July 18) after a two-week break.

Chrysler Corp.'s Warren truck plant worked daily overtime and Saturday (July 16) last week. General Motors' Detroit, Pontiac and St. Louis facilities also logged Saturday overtime.

Canada builds 13,081 cars, up 2 pct. for week

With three of the five Canadian car makers closed last week, production was scheduled at 13,081 units, up 2.79 percent from the previous week and 11.44 percent over 11,738 cars assembled in the year-ago week.

So far this year, 559,102 cars have been completed in Canada, up 10.61 percent from 505,456 built in the comparable 1982 period.

Truck output, at 8,444, was down 1.48 percent from the previous week's 8,571. Last weeks' total was up 27.53 percent from last year's 6,621.

Year-to-date, 292,089 trucks have been built, down 1.82 percent from 297,506 in the year-ago period.

Ford Motor Co.'s Oakville and St. Thomas facilities are in the midst of a three-week vacation which began July 4.

American Motors' Brampton point is back in operation today (July 18) after a four-week summer break.

Chrysler Corp.'s Windsor car plant is retooling for the T-115 van/wagon, which it will begin to produce during the first week of October.

International Harvester's Chatham and Vancouver facilities remained closed for model changeover. Operations there, idled May 23, are scheduled to resume July 25.

Rivals unleash new blast at GM-Toyota tie

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — International joint ventures are the wave of the future, the Big Three conceded, but Ford Motor Co. and Chrysler Corp. are determined to stop the General Motors-Toyota linkup.

The GM-Toyota deal is "just traditional Toyota tokenism," Chrysler chairman Lee Iacocca told a House Monopoly Subcommittee last week.

If the agreement is disallowed, "Toyota will build cars in the U. S. on its own," he said.

The result of an FTC antitrust investigation of the proposed joint venture is due in September, but Iacocca asked the subcommittee to "go beyond the antitrust laws and look to the broad public interest."

Ford Vice President, David N. McCammon told the subcommittee the arrangement "does not represent a commitment by Toyota to U. S. production; rather it is designed to produce cars for GM with high Japanese content—in effect taking GM to Japan."

As they have earlier, both Ford and Chrysler claimed the venture would be a "clear violation of U. S. antitrust laws. Chrysler said the deal would give GM and Toyota 75 percent of the U. S. subcompact market, with product pricing influence over the rest of the industry.

Ford said it would lead to the exchange of significant competitive information resulting in an "abnormal competitive advantage" for the two industry giants.

• But GM pleaded innocent to its competitors' charges of monopoly, asserting that the venture is only a "bridge" until GM could develop its own subcompact.

GM Vice President Marina Whitman told the subcommittee her company was engaged in the development of small cars independent of the joint venture vehicle and that GM viewed its cooperation with Toyota as a means of learning Japanese small-car production techniques first hand.

GM was quick to remind the committee that Ford, GM and Chrysler already own parts of, and are supplied by, Japanese auto makers.

Whitman said Ford and Chrysler would probably join GM in negotiating joint ventures of their own. Maybe they were sorry GM had beaten them

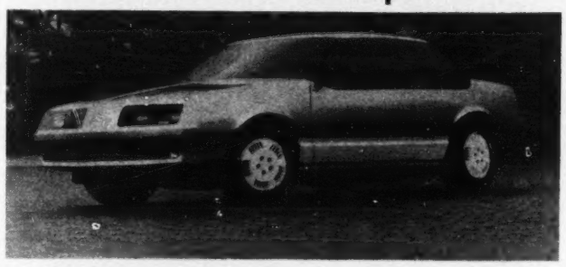
Cavalier concept



The future by Fisher

Fisher Body's R&D department displayed its Chevrolet Cavalier-based concept car during last week's celebration of the division 75th anniversary. The all-glass greenhouse and hardware and trim-free exterior decrease wind drag. Other features include an infinite-position door hinge, motorized door latch that eliminates the need for door-slamming and programmable cathode ray tube instrument panel.

FTC to reconsider its earlier decision on used-car rule

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The Federal Trade Commission has voted, 3 to 2, to reconsider the used-car rule — the one recently reinstated when the U. S. Supreme Court overturned the legislative veto that had killed the rule.

Only three of the commissioners who voted unanimously for a watered-down rule in August, 1981, are still at FTC.

Commissioners Patricia Bailey and Michael Pertschuk continued their support of the rule, but Commissioner David Clanton, who is due to retire Sept. 25, switched his vote to join Reagan appointees Chairman James C. Miller III and George Douglas.

Miller, who has in the past favored only disclosure of existence of dealer warranties and/or service contracts and a statement that written promises are better than salesmen's claims, said:

"We need to demonstrate to both Congress and the courts that the commission is a responsible agency. We need to reexamine the rule to find a solution so clearly supported by the record that it will not fall prey to the same type of widespread disapproval and criticism that has plagued the existing rule."

• The FTC also decided to make the effective date for the revised rule six months after the end of litigation brought by NADA and the National Independent Automobile Dealers Assn. in the Second Circuit Court of Appeals in New York.

Those suits challenge the merit of the final rule and also question FTC's procedures in arriving at the weakened rule.

NADA said it was "encouraged" by FTC's decision to reconsider the rule which NADA has opposed as not providing effective consumer protection.

The FTC actions, NADA said, will "provide an opportunity to overcome the high cost and problems which the rule would cause if implemented in its present form."

NADA said it will happily work with FTC to develop an alternative. Earlier, NADA suggested FTC might accept its voluntary labeling program which does not require the dealer to reveal anything about a car's condition.

The rule which FTC will now consider required a sticker disclosing defects in major parts or components when known to the dealer.

Demand for wage parity with GM and Ford causes breakoff

Chrysler-UAW contract talks fail

By Marjorie Sorge
Labor Editor

The UAW and Chrysler Corp. failed to reach an agreement last week on a new contract that would have provided Chrysler workers an immediate $1 an hour wage hike and a 41 cent raise next year.

While the two sides agreed on the $1 an hour raise, they could not agree on when or if the workers would achieve parity with their counterparts at Ford and General Motors.

"I am very much disturbed that Chrysler Corp. was unable to step forward with the wage and benefit improvements that we feel very deeply the Chrysler workers deserve," said Owen Bieber, UAW president.

Bieber said the union expected the company to "negotiate a fair share of the corporation's renewed prosperity with the Chrysler workers . . . who made the greatest sacrifice of anyone in the Chrysler Corp."

The Chrysler workers have made about $1.1 billion in concessions since 1979 when the corporation was in poor financial shape. Chrysler made a profit of $310.3 million in the second quarter of 1983 and $172 million in the first quarter.

The company will also pay off its $800 million in federally guaranteed loans on Aug. 15, seven years early.

Chrysler Vice President Thomas Miner criticized the union for putting such a "take it or leave it" tone on the negotiations which began last Monday (July 25).

The UAW told the company a new contract must be reached by 5 p.m. on Wednesday (July 27), so union officials could catch planes from Detroit to attend the union's Chrysler Council meeting in Huntsville, Ala.

"We went a long way, we tried very hard for a company just bailing itself out of debt," Miner said. "Chrysler walked the last mile on this one."

• Miner further criticized the union for taking a "business as usual attitude" and said the UAW's proposals were so much more than the Chrysler offering that "we choked on it."

The UAW's proposal asked for full parity with Ford and GM in 1985, a $1 an hour up-front raise and profit sharing.

According to Miner, the UAW was asked if it wanted profit sharing on top of full parity and a wage increase, the answer was yes and Chrysler answered, "We aren't interested in that."

According to Miner, the company's proposal was for a two-year agreement, ending Sept. 14, 1985, which would have cost Chrysler $895.5 million over its life span. The current contract

Initial focus to be missing $17.6 million

U. S. task force to probe DeLorean

By Edward Lapham
Senior Editor

The U. S. Attorney's Office in Detroit is forming a task force to investigate John Z. DeLorean and his defunct auto company, Automotive News has learned. A federal grand jury could be impaneled within 60 days.

The task force will be headed by an assistant U. S. attorney and will include investigators from the Internal Revenue Service and the Federal Bureau of Investigation.

Investigators from the Securities and Exchange Commission, the U. S. Postal Service and U. S. Customs Service also are likely to join the team.

The initial focus of the investigation is the mystery surrounding the $17.65 million which disappeared from the sports car project in 1978.

However, it is likely the task force will expand the investigation to include other allegations of fraud, according to Automotive News sources.

Several weeks ago, a Detroit TV station, ABC affiliate WXYZ-TV, reported the FBI was investigating the reorganization plan proposed by DeLorean and an associate to save DeLorean Motor Co., now in Chapter 11 proceedings in U. S. Bankruptcy Court in Detroit. That investigation, still under way, is only a part of the Justice Department effort, however.

Apparently the U. S. Justice Department, which has an internal "double jeopardy" policy, has resolved its internal differences and decided to undertake the task force investigation.

Under the informal "double

He outlines GM plans for big and small cars

Smith looks for a healthy 3 years

By Kathleen Hamilton
Financial Editor

A billion-dollar quarterly profit in a mediocre sales year is clearly just the beginning for General Motors, whose chairman, Roger B. Smith, last week outlined some of GM's plans to capture big- and small-car sales during what he expects will be a healthy three-year period.

Acknowledging GM is in short supply on certain models, Smith said the company is embarked on a very aggressive production schedule for the third quarter. GM probably will match its second-quarter build of more than one million cars, he said.

GM is positioned to expand its offerings of larger cars in response to demand, according to Smith. Baltimore, which now builds rear-drive intermediates, could continue to have larger-size cars or it could get a smaller product; that decision has not been made, Smith said.

But the closed South Gate (Calif.) and Lakewood (Ga.) plants are also options for large cars, he said.

"We're never going to abandon the American family," Smith said, citing the need for family-sized cars and vehicles capable of towing.

Twenty percent of U. S. families have five or more persons, and those demographics aren't changing much, he said. Families buy cars capable of meeting their largest needs, he said.

Fuel-economy credits from previous years should be enough to carry GM through the surge in demand for big cars, he said.

• Meanwhile, GM's small-car strategy — which relies heavily on joint ventures with the Japanese for at least awhile — is on schedule, according to Smith.

GM is now testing the Suzuki minicars and the subcompact Isuzus it plans to import in 1985. Its sales predictions for the Suzuki are in the range of 80,000 to 100,000 per year; for the Isuzu, about 200,000.

The Japanese Government, Suzuki and Isuzu will have to determine the allotment for GM if the import quotas are extended into 1985, Smith said.

He acknowledged GM and Toyota have already committed themselves to millions of dollars in expenses on their joint venture to produce subcompacts in California beginning in the 1985 model year.

But he expressed confidence that the money has been well spent: GM believes the FTC will approve the project.

The delay in approval has been due solely to translation and long distance, not to criticism by Chrysler Corp. or to any unusual requests by the FTC, Smith said.

GM has complied with all requests, and Toyota is nearly done, he said. The anticipated startup date of December, 1984, has not been affected, Smith said.

Meanwhile, the GM-Toyota labor negotiator, William J. Usery Jr., is in Japan and has completed a long series of talks with the UAW, Smith said. The two sides have agreed on all but a few issues, he said.

• In the U. S., eligible UAW members at GM will earn $400 to $600 in profit sharing this year if Wall Street analysts' projections for GM profits are accurate, Smith said.

Such profit-sharing plans should reduce the pressure for wage increases in the next bargaining round, he said.

Smith said his prediction of a 14.5-million sales rate for vehicles by the end of the year is still achieveable; it is now running at 12.5 million.

Uncertainty in the market, generated by high interest rates, is the only stumbling block, he said. If the recovery continues to be gradual, Smith predicted the upturn for autos easily could last through 1985.

Smith's remarks came prior to his appearance at a 75th anniversary celebration for Fisher Body at the Warren (Mich.) Technical Center. The division marked the event on separate days last week, inviting retirees, dealers, employes and government officials.

General Motors begins its 75th anniversary celebration on its birthday, Sept. 16, with entertainment at its Detroit headquarters. All plants will follow with open houses during September. Five casts of the Up With People singers will be giving about 170 performances in 50 GM plant cities.

A special car for a prince

The Meera S, a special Ferrari designed and built by Michelotti, of Turin, Italy, has been delivered to a young Saudi prince who wanted an exclusive car to drive during his stays in Europe. It combines the performance of a new Ferrari 400i with bodywork hand-made in the Michelotti shops.

Ford plans big outlay for robots, electronics

Ford may have redesigned its car lineup, but its capital spending for plant and product improvements hasn't yet peaked, Chairman Philip Caldwell said last week.

Ford plans to spend more than $3 billion a year for at least the next four years, much of it for plant robotics and automotive electronics, he said.

For 1983 models, Ford spent a few million dollars less than the $3 billion it had budgeted for such updates. Nothing was cut from the budget, however, Caldwell stressed. As in other areas, the company has simply become more efficient, he said.

Over the last four years, capital investment totaled more than $11 billion at Ford, and this was an 80-percent increase over the prior four years, he said.

Talking about the nearer term, Caldwell said Ford has recently added 30,000 vehicles to its production schedule to meet what it anticipates will be a 50-percent sales improvement in the second half compared with the second half of 1982. That would mean 978,000 car sales — even more than in this year's first half.

The scheduled reopening of the St. Thomas (Ont.) plant for production of large rear-drive cars has been accelerated from early 1984 to October, 1983, to accommodate recent demand for big cars. In addition, a second shift has been added at Wixom (Mich.) for production of luxury cars.

• Caldwell predicted industry sales will exceed 9 million cars this year and, "if we don't muck it up" with high interest rates, more than 10 million next year.

He's looking for Ford to take a bigger share next year, with its new offerings in the mid-size range. For example, orders for Tempo and Topaz already equal planned output for the remainder of the model year.

A two-liter diesel Escort, to be introduced next year, should put Ford on the EPA's Top 10 list for fuel efficient cars, he said.

Saying the trade imbalance between Japan and the U. S. is bigger than a single industry, Caldwell said an undervalued yen is an even bigger problem. Until it is brought into balance with the dollar, some arrangements should be made to compensate the U. S. industry, "and quotas are a good way to start," he said.

He said he has seen little progress from the U. S. Government on the trade imbalance and what he said are inequitable tax treatments by the Japanese. Action is needed soon, Caldwell said.

IH Truck Group breaking even, Springer reports

SPRINGFIELD, O. — Neil A. Springer, president, International Harvester's Truck Group, said the group now is operating at the break-even point, and expressed optimism that improvement in its big-truck sales will continue.

He attributed the improved operating results to an increased share of a smaller market and extensive cost cuts.

International's share of the Class 8 market through June, Springer said, had increased to 22.6 percent, compared with 20.5 percent a year ago, while its penetration of the medium-truck segment (Classes 4 through 7) rose from 28 percent last year to 32.5 percent.

Springer's comments came after a ceremony marking the completion of the transfer of heavy-truck production from Fort Wayne, Ind., to newer facilities in Springfield. The ceremony marked the start of production here of International's Model 9670 heavy trucks, previously built in Fort Wayne.

The consolidation of assembly here was cited as one of the firm's cost-cutting moves. While the consolidation cost close to $10 million, annual pre-tax manufacturing expenses will be reduced by $60 million, it was noted.

Extension of car quota described as unlikely

By Jim Plegue
Staff Writer

TOKYO. — Extension of the voluntary quota on Japanese cars exported to the U. S. is unlikely in view of the return to profitability by U. S. auto makers, the chairman of the Japanese Automobile Manufacturers Assn. (JAMA) indicated last week.

"U. S. auto makers are turning a profit and the key as to the turn of events with voluntary restraints is whether profitability will be sustained or not," said Takashi Ishihara, president of Nissan Motor Co., Ltd., and head of JAMA.

Ishihara's comments were made during a press conference with a group of U. S. reporters who were in Japan to preview the all-new Nissan 300-ZX sports car.

Ishihara said the rebound by U. S. auto makers is chiefly a result of the renewed popularity of mid-size and full-size cars and is not attributable to the Japanese import restrictions, which end next March. The current export limit is 1.68 million cars a year.

Ishihara said Nissan has no plans to introduce mid-size and full-size cars into the U. S. market.

He also used the press conference to criticize local-content legislation.

"It is inconceivable that American companies regain their competitive edge internationally by resorting to this . . . by shutting out the import of components," he said. "I strongly urge the U. S. Congress not to pass this highly protectionist bill."

• Nissan will not "under current circumstances" introduce additional lines in the U. S., he said. Earlier, the company had planned to sell its Prairie minivan in the U. S.

"I think U. S. dealers have more than enough models," Ishihara said. "Even if we added another model, it would not result in an increase in total sales."

Ishihara also said limited sales volume would not justify introduction of the Nissan March mini-car into the U. S. market.

Ishihara admitted that the competitiveness of U. S.-made compact trucks — Chevrolet S-10, GMC S-15 and Ford Ranger —took Nissan by surprise. He said Nissan must make improvements to its pickup truck line to remain competitive.

On the subject of passive restraints, Ishihara called air bags "impractical" and "insufficient to save lives."

"In view of the current technology, I'm not in favor of making air bags mandatory," he said.

Zenzo Sonoda, executive managing director and chief of Nissan Research and Development, said air bags are effective only in frontal collisions and said the mechanisms "leave something to be desired" in terms of reliability when produced in quantity.

Instead, Nissan is developing passive belt systems for its cars, Sonoda said.

Profits the key

Takashi Ishihara, chairman of the Japan Automobile Manufacturers Assn., said sustained profitability by U. S. auto makers will be a key factor in the decision regarding quotas on Japanese exports to the U. S.

Agency to study 55-MPH law

WASHINGTON.—A comprehensive study of the benefits and costs of the national 55-miles-per-hour speed limit has been launched by the National Research Council.

A 19-member panel, chaired by Dr. Alan A. Altshuler, dean of the Graduate School of Public Administration, New York University, has been selected to assess the safety, energy and economic effects of the speed limit law.

The panel will deliver its report to Congress and the Secretary of Transportation in August, 1984. NHTSA is funding the study.

Military truck gets new parent

Quarter-ton M-151 military vehicle is one of more than 30 different models of tactical trucks built by AM General. American Motors has signed an agreement to sell AM General to LTV Corp.

Mid-month total is highest since 1979

Sales post sixth straight increase

By Jenny L. King
Staff Writer

Up for the sixth consecutive 10-day period, domestic new-car sales continued to show signs of increasing strength, even during the long, hot, sometimes slow-paced days of summer.

All U. S. auto makers except Volkswagen of America improved their mid-July sales totals compared with a year ago, bringing the final count to its best level since 1979.

For July 11-20, it was 206,875, up 56.21 percent from 132,438 in 1982. Four years ago, in 1979, the mid-July total was 239,253. Highest for the period was 310,431 tabulated back in the boom year of 1973.

On a daily-rate basis, sales were up 38.85 percent, to 22,986 per day with nine selling days this year from 16,555 based on eight selling days a year ago.

Year-to-date sales for 1983 stood at 3,677,507, up 15.82 percent from 3,175,180 through July 20, 1982.

For the period, General Motors was up 63.80 percent, to 128,390 from 78,382 last year (up 45.60 percent on a daily-rate basis). Ford Motor Co. was up 42.47 percent, to 43,718 from 30,686 (up 26.64 percent daily rate). Chrysler Corp. sales of 26,403 were up 41.21 percent from 18,698 (up 25.55 daily rate).

American Motors was up 102.27 percent, to an estimated 4,450 from 2,200 (up 79.64 daily rate); VWoA dropped 15.13 percent, to 2,098 from 2,472 (down 24.60 daily rate), and Honda sales of Ohio-built Accords totaled 1,816 for the period.

• GM's share of the market climbed to 62.06 percent from the year-ago 59.18 percent. Ford slipped back to 21.13 percent from 23.17 percent. Chrysler was down to 12.76 percent from 14.12 percent. AMC rose to 2.15 percent from 1.66 percent; VWoA skidded to 1.02 percent from 1.87 percent and Honda held the remaining 0.88 percent of the 1983 market.

There were double-digit percentage increases in sales for most of the U. S. makes July 11-20. At GM, Cadillac was up 48.28 percent, Chevrolet was up 62.27 percent, Oldsmobile was up 63.35 percent, Buick was up 71.41 percent and Pontiac was up 65.37 percent.

Ford Division was up 36.26 percent, Mercury was up 57.12 percent and Lincoln climbed 55.60 percent. At Chrysler Corp., Chrysler was up 62.55 percent, Dodge was up 49.81 percent, Plymouth was up 19.46 percent and Imperial sales dropped 45.16 percent.

VW was down 15.13 percent and AMC was down an estimated 38.64 percent, while Renault Alliance and Honda Accord were on the board for the first time and had no year-ago comparisons.

Annualized sales based on the July 11-20 total figured to 6,888,900. A year earlier, they were traveling at a rate of 5,571,000, close to the year's actual total of 5,756,660.

Detroit to continue as base

AMC sells AM General to LTV

DETROIT.—American Motors has signed an agreement to sell its AM General subsidiary to LTV Corp.

AM General is the largest U. S. supplier of U. S. tactical military vehicles.

AMC will receive $120 million in cash and $50 million in short-term notes from LTV and a $20-million dividend from AM General.

Closing is scheduled for mid-September after the receipt of various required approvals.

AM General will be operated as part of LTV's Aerospace/Defense Group, headed by Robert L. Kirk, an LTV group vice-president.

"We are pleased that LTV will be the new parent company of AM General," said Paul Tippett, chairman and chief executive officer of AMC.

"LTV is a first-rate organization and should continue AM General's tradition of excellence. With LTV as the purchaser, we are confident that the transaction will proceed on schedule.

"We made the decision to sell AM General in order to concentrate our resources on a planned automotive product strategy and to fund development of new products in the future," Tippett said.

• Said LTV's chairman, Raymond A. Hay, "AM General's position as a leading manufacturer of tactical military vehicles will complement our broadening defense and aerospace base and improve the balance with our other businesses which are affected by the general economic climate.

"AM General is a highly successful government contractor and has a fine growth record under the leadership of its president, Lawrence Hyde," Hay said.

AM General is headquartered in Detroit and has production facilities in Indiana. It is completely separate from Jeep Corp., another AMC subsidiary.

"We are pleased that LTV plans to retain the AM General organization intact and that AM General will remain based in the Detroit area with manufacturing operations continued in South Bend and Indianapolis," Tippett said.

"We are also pleased that LTV will continue to reactivate a presently unused facility at Mishawaka, Ind., for Hummer production, with every indication that employment will be increased."

• AM General has approximately 2,600 employes, 300 in the Detroit area and 2,300 in Indiana. LTV will seek separate facilities for the 300 in Detroit currently based with AMC.

Based in Dallas, LTV is a multi-industry company which operates in the aerospace/defense industry through its Vought Corp.; in the steel industry through its Jones & Laughlin Steel Corp., and in the energy field through its Continental Emsco subsidiary.

With the assistance of its financial advisor Lazard Freres, AMC received offers for AM General from other companies and an AM General management group.

One suitor was Cyprus Corp., an investment firm headed by Willard F. Rockwell Jr. The management group was headed by Hyde.

A spokesman for AMC said LTV indicated it wants to retain all of AM General's employes, including Hyde and the 12 other executives who comprised that consortium.

AM General produces more than 30 different models of tactical trucks, ranging in size from ¼-ton to 20-ton. It also produces postal vehicles.

In March, AM General was awarded a $59.8 million contract by the Army for 2,334 multi-purpose wheeled vehicles dubbed the Hummer. The award is for the first year of a five-year multi-year contract for 54,973 vehicles. The potential value of the total contract is $1.2 billion.

For the three years, 1980-82, AM General's annual sales amounted to $374 million, $276 million and $485 million, respectively, with pre-tax profits of $19 million, $24 million and $79 million. For the first six months of 1983, AM General's pre-tax profits were $21.4 million on sales of $293 million.

AMC's gain on the sale should show up on the firm's third-quarter balance sheet.

Efforts to cure trade inequities urged by Ross

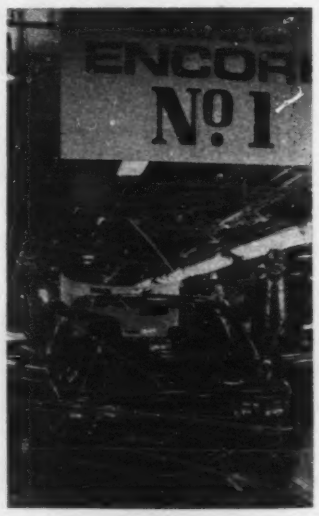
TRAVERSE CITY, Mich.—Louis R. Ross, Ford Motor Co. executive vice president, is a political agitator, he admitted to a University of Michigan management seminar here.

"I'm trying to get you up in arms about some of the basic inequities facing us in world trade," Ross told an audience of 400, made up mostly of supplier firm executives.

He ran through a list of issues he said must be changed through "the rational revolution of U. S. industry."

The 28-year-Ford veteran's list includes a lack of U. S. national strategy, unrealistic currency relationships to the dollar, tax inequities and a lack of technical leadership, particularly in manufacturing.

"If you don't cure these problems there will be a serious threat to our industrial base," he said. Ross said all the changes he thinks are needed can be forced by the pushing of congressmen by individuals and institutions in their districts.



The first Encore

Preparing to drive the first Renault Encore from the American Motors assembly line in Kenosha are George Maddox, right, AMC manufacturing vice president, and Gene Sylvester, president of UAW Local 172. The Encore three-door and five-door hatchbacks will go on sale in September.

Ford's Feaheny seeks $330 million in suit

DETROIT. — Thomas Feaheny, Ford Motor Co. vice president for vehicle research, last week sued Henry Ford II, Ford Chairman Philip Caldwell and five other senior Ford executives for $330 million.

Since filing the lawsuit, Feaheny has been suspended from his post, with pay.

Feaheny said in a suit filed in Circuit Court that ever since he testified as a witness for Ford in a Pinto trial, there has been a conspiracy by Ford officials to leave him to "twist in the wind."

Feaheny told the press he believes he is the only Ford officer who wasn't granted stock options in 1980-82 and that he thinks he should have received options worth $1 million.

He said his salary of $165,000 a year has been frozen since early 1979. Feaheny said he also had been denied other "perks." All of this, he said, damaged his reputation and caused him economic hardship.

Feaheny said his problems began when Caldwell became chairman in 1980. Early in 1980, Feaheny had testified in the Pinto trial in Winamac, Ind., in which Ford was charged with reckless homicide in three deaths resulting from a fiery Pinto rear-end crash.

Feaheny testified that the Pinto was safe and Ford was acquitted of the charges. At the time of the trial, Feaheny was vice president for car engineering.

Feaheny said he believes that top Ford executives considered him "tainted" by his Pinto involvement.

After Caldwell was named chairman and a new team was brought in following the dismissal of Lee A. Iacocca, Feaheny said, there was a concerted effort to get rid of officials associated with products developed under Iacocca.

Feaheny said he has no plans to resign from Ford.

Along with Ford and Caldwell, executives named in the suit are Harold A. Poling, executive vice president for North American Automotive Operations; Harold C. MacDonald, a retired vice president for engineering and research; John McDougall, a retired executive vice president for International Operations; Louis R. Ross, an executive vice president for technical staffs, and Peter J. Sherry, vice president for personnel and organization.

In a Ford statement, Henry R. Nolte Jr., general counsel, said, "We have not had the opportunity to review Mr. Feaheny's complaint in detail, but we are generally familiar with this matter.

"We believe the actions of the company and its officers were entirely proper and that there is no basis for any of the claims."

Earnings top $542 million

Ford sales and profit highest in four years

By Kathleen Hamilton
Financial Editor

Ford Motor Co. reported its highest sales and profit levels in four years, beating Wall Street's projections for the second quarter.

Earnings of $542.2 million ($4.50 a share) came on sales of $11.73 billion. It marked the first time since 1979 that the No. 2 auto maker had two consecutive money-making quarters.

Earnings for the second quarter were more than 2½ times the level in the comparable 1982 quarter, when Ford earned $204.9 million. In the meantime, quarterly unit sales were up less than 1 percent and dollar volume was up 7 percent from $10.9 billion.

That means Ford has benefited from a richer model mix and greater volumes that allow it to garner more profits per car. But Ford Chairman Philip Caldwell also attributed the gain to major cost reductions.

U. S. operations are "solidly in the black," Caldwell said. Because Ford Motor Credit Co. contributed only $70.4 million toward the profit (nevertheless up more than a third from last year), this means Ford is indeed making money on U. S. vehicle sales.

Caldwell said Ford has trimmed $1 billion in annual costs each year since 1979. However, its costs for the latest quarter were up 4.5 percent compared with a year earlier.

Ford has reduced its selling and administrative expenses, retirement costs, interest costs and debt compared with last year. Its cash level of $2.49 billion at the end of the quarter was slightly below the $2.62 billion on hand a year earlier.

• Outside the U. S., Ford earned a profit of $136 million in the second quarter, a 24-percent decline from a year earlier. Ford attributed the decline to adverse foreign currency exchange effects in Latin America and to the high cost of new-model introductions.

Car and truck sales overseas totaled 553,758 in the second quarter, an increase of 4 percent over last year's 532,198. Car and truck sales in the U. S. and Canada totaled 778,426, a decline of less than 1 percent. When tractor sales are added, worldwide vehicle sales totaled 1.35 million, an increase of less than 1 percent.

Like General Motors and Chrysler, which announced their profits first, Ford has substantially reduced its breakeven point and was able to make much higher profits per sale even with last quarter's modest sales upturn.

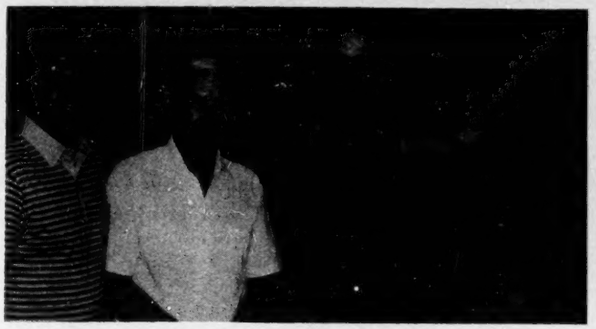
In the first six months of this year, Ford earned $764.4 million ($6.25 a share), a turnaround of $862 million from the loss of $97.5 million ($0.80 a share) in the first half of 1982.

Sales for the first half were up nearly 10 percent, from $19.85 billion last year to $21.77 billion this year.

GM ranks as No. 3 on Forbes 500 list

NEW YORK. — General Motors' 1982 sales of $60 billion were enough to keep it in third place on the Forbes Sales 500 list. Ahead of GM were Exxon, with sales of $97 billion, and American Telephone & Telegraph, with sales of $65 billion.

Ford Motor Co. moved from No. 7 to No. 6, even though its sales of $37 billion represented a 3 percent decrease. Chrysler fell from No. 37 to No. 42 with sales of $10 billion. American Motors improved its position, from No. 254 to No. 233, with its sales of nearly $3 billion.



Georgia officers begin terms

T. G. Crosby, third from left, Crosby Pontiac-Cadillac-GMC-Datsun, Waycross, has begun his term as president of the Georgia Automobile Dealers Assn. Pictured with Crosby are, from left: William F. Morie, GADA executive vice president; Carey B. Paul, Carey Paul Ford-Honda, Decatur, retiring president, and Lewis A. Welch, Lewis Welch Oldsmobile, Morrow, president-elect and treasurer.

But dollar volume rises 42 pct.

AMC's loss is worst in 11 quarters

American Motors, hit by high retooling costs and a sharp drop in government payments to its AM General subsidiary, reported its worst loss in 11 quarters: $78.87 million ($1.06 a share).

The second quarter marked the 13th consecutive period in which AMC lost money, and the loss was bigger than several analysts had predicted. Last year at this time, AMC reported a second-quarter loss of $68.76 million ($1.24 a share, when there were 20 million fewer shares outstanding than there are today).

But there was a glimmer of a silver lining in AMC's preliminary earnings report: Vehicle sales were up 43 percent from the year-earlier period, and dollar volume increased 42 percent.

Even better, dollar sales for the most recent period didn't include revenue from AM General. It is already being considered a discontinued operation, even though its sale to LTV Corp. is not expected to become final until mid-September.

Losses from operations other than AM General were actually stemmed this quarter, the AMC figures show. Losses were $78.87 million in the most recent quarter, $86.46 million in the first quarter and $92.55 million one year ago.

• AMC officials had said earlier this year they expected this year's first-half losses to be higher than last year's, but they said the second half of this year will show a significant improvement, even without the sale of AM General.

That sale is expected to add another $90 million gain to AMC's third-quarter balance sheet. The sale price is $190 million.

AM General's earnings last quarter were only $991,000, compared with $23.79 million in the second quarter of 1982 and $20.39 million in the first quarter of this year. A spokeswoman for AMC attributed the decline to the sporadic nature of government funding.

Last quarter's massive loss also reflects the high cost of major retooling for a new line of small Jeeps in Toledo, two hatchback versions of the Renault Alliance (to be called the Encore) in Kenosha, Wis., and a new four-cylinder engine. Some of the cost of discontinuing the old AMC car lines also showed up in the second quarter.

Sales for the quarter (not including AM General) were reported at $761.74 million, up 42 percent from the $536.09 million of a year earlier and up 19.5 percent from the first quarter's $637.43 million (restated to eliminate AM General).

For the first six months of this year, AMC lost $144.95 million on sales of $1,399.2 million. A year ago, the first-half loss was $119.7 million on sales of $1,022.7 million.

• Unit sales in the U. S. and Canada were up more than 60 percent, from 55,346 in the second quarter of last year to 88,843 last quarter. That broke down into a gain of nearly 77 percent in cars: From 39,075 to 69,116, and a gain of more than 21 percent in Jeep sales: From 16,271 to 19,727.

International vehicle sales dropped nearly 45 percent, from 11,047 to 6,103.

Worldwide vehicle sales were 94,946, a gain of 43 percent from the second quarter of 1982.

A joint statement by Chairman J. Paul Tippett and President Jose Dedeurwaerder noted that "the international outlook is beginning to improve," and AMC has resumed shipments to Mexico and Venezuela.

"Sales of the Alliance continue strong, and recent actions have improved our margins on this vehicle," they said. The improvement was made without any additional foreign sourcing, an AMC executive said earlier.

Alliance output has been increased to 900 per day, and AMC is investigating further production increases. Beginning July 11, the company also increased its Jeep production by 200 units a day, with the addition of the smaller Jeep XJ. AMC anticipates increased sales in this segment.

Big Three profits near $1.9 billion; AMC still in red

The Big Three reported net income of $1,895 million for the second quarter, up 117 percent from last year's $872 million. Each of the companies was solidly in the black.

American Motors, however, continued to swim in red ink. AMC's loss cut net income to $1,816 million for the four manufacturers, a gain of 126 percent over $803 million in 1982.

For Chrysler Corp., the second quarter was the best three-month period in history with a profit of $310 million. It was nearly triple the $107 million earned in the April-June span a year ago.

Ford Motor Co. jumped to a profit of $542 million in the second quarter, more than 2½ times as much as the $205 million it earned in the corresponding period of 1982.

General Motors made its best showing in four years and had its fifth highest quarterly earnings ever. The total was $1,043 million, up from $560 million a year ago.

AMC reported its 13th consecutive quarterly loss. The second-quarter deficit was $79 million, compared with a loss of $69 million last year.

GM's billion-dollar profit is fifth highest in history

By Kathleen Hamilton
Financial Editor

General Motors reported second-quarter earnings of $1.04 billion ($3.32 a share), its best showing in four years and the fifth-highest quarterly earnings ever on record sales.

Earnings were up better than 86 percent compared with $560 million in the year-earlier quarter, but sales were up only 12 percent in unit volume and 13 percent in dollar volume.

One big contribution to earnings was another record quarter by GMAC. The finance subsidiary and its insurance arm reported earnings of $250.9 million, a second-quarter record. The total was down by about $6 million from the first quarter, but was almost double the year-earlier figure of $130.9 million.

GM improved its cash position by $2.3 billion during the quarter.

Sales of $19.4 billion were 13 percent above last year's $17.1 billion, and unit sales of 2.05 million vehicles were up 12 percent from the second quarter of 1982, when GM sold 1.83 million cars and trucks.

• Analysis of the company's preliminary financial reports shows GM did make some improvements during the quarter in reducing its inventories and interest expenses, but most of its gains seem to be from higher profits per sale.

Certainly the public's shift toward larger cars has benefited GM more than any other auto company, but it is also clear that GM has passed its (undisclosed) breakeven point. Above that level of production, it makes considerably more profit per car.

For the half, GM earned $1.70 billion ($5.40 per share) on sales of $36.14 billion. Earnings were almost 2½ times as much as last year's $688.3 million ($2.23 a share). Sales were up more than 13 percent from last year's $31.87 billion.

Mexico approves 13.5 pct. hike in vehicle prices

MEXICO CITY. — The Secretariat of Commerce and Industrial Promotion has authorized the automotive industry to increase vehicle prices by 11.37 to 13.5 percent, depending upon the needs of each company, according to Arturo Guerra, technical director of auto manufacturers association.

Guerra also said that 55 to 60 percent of the parts the industry is using are made in Mexico and the other 40 or 45 percent are imported, which raises costs considerably for each unit.

He said the 45 percent imported parts means that manufacturers lose money on each unit delivered to dealers.

"According to the government's plans," Guerra said, "this problem will be solved by 1986. By then, imported parts for automotive production will represent only 20 percent and the other 80 percent will be parts made in Mexico."

Optional test is proposed for meeting brake standard

WASHINGTON. — An optional brake-test procedure for trucks and some buses over 10,000 pounds has been proposed by NHTSA for its standard on hydraulic brake systems.

NHTSA said the change would allow certain vehicles built by GM to pass the government's braking safety standard for partial braking failures.

GM recently told NHTSA that some of its vehicles could not pass the limited test sequence for braking, but qualified under the more extensive test.

NHTSA said the increased stringency of the limited test was unintentional, and resulted from the tendency of cold, or untested brakes, to be less effective than those tested after use has created heat-induced friction.

NHTSA's proposal would allow manufacturers to meet partial failure requirements after conducting the standard's full test sequence, instead of the abbreviated test now specified.

The full test is mandated for all school buses and is considered more thorough. It calls for three effective tests, brake conditioning procedures and the use of the parking brake. The abbreviated version calls for brake conditioning only.

GM said redesign of its vehicles under the limited test sequence would have cost at least $100 per vehicle without improving user service.

Chevy signs Proffitt

GALLUP, N. M. — Terry L. Proffitt has been franchised by Chevrolet to operate Amigo Chevrolet here.

As West Germany breaks ranks to require its use

Lead-free gas confuses Continent

BONN, West Germany.—The decision by the West German Government to introduce lead-free gasoline for the 1986 calendar year has caused widespread confusion throughout Europe's auto industry.

It followed a few weeks the European Commission's latest gathering in Stuttgart, where it was agreed to investigate the possibilities of introducing lead-free fuel across Europe. That report was due to be heard on April 1 next year.

It also followed independent actions by governments in Sweden, Switzerland and the UK. But while the UK's concern about lead in gas centered on possible brain damage to young children, West Germany's was on acid rain, which is believed to be ruining the forests which form part of the country's national heritage.

"It really took us by surprise — and in the middle of our works holiday," reports a spokesman for Germany's largest auto maker, Volkswagen.

• Until recently, European countries have been able to solve their exhaust emission problems with considerable cooperation.

Carbon monoxide emissions have been reduced to 30 percent of their 1972 value, unburned hydrocarbons to 50 percent, and, since 1977, a gradual reduction of NOx emissions has been added to the program.

Regulations have been met without the use of catalytic converters, lead-free gas, exhaust-gas recirculation, low-compression ratios and other fuel-consuming devices. Even without downsizing, most European cars use 15 percent less fuel than four years ago.

Lead in gas content is set at a maximum of 0.4 grams per liter and a minimum of 0.15 — the latter to prevent any government from trying to close its market to competition by offering only lead-free gas on its territory.

Any changes in regulations have to be at EC level and with the consent of all members. Also, non-EC countries are considered party to the agreements, provided they do not change the rules.

But, the lobby for lead-free is growing. Most politicians and auto makers agree, though: It should be introduced across the continent at the same time. If not, trans-European border crossing to countries where no lead-free is available will become impossible.

• Most reluctance seems to emanate from France and Italy, where the additional burden of fitting catalytic converters is a bigger consideration on their smaller, less expensive cars than it is on the higher-priced models from West Germany.

Sweden was first to decide it needed more stringent regulations. It was followed by Switzerland, which last year introduced its own, more strict regulations and test procedures. They did not, however, require the fitting of catalytic converters.

In the UK, the Government finally accepted the evidence about environmental lead being a health hazard to children and announced lead-free gas from 1990 at the latest.

In Germany, the acid-rain destruction of trees has in part been traced to car emissions. But, according to Prof. Werner Breitschwardt, head of R & D at Daimler-Benz, "Only 2 percent of total NOx emissions, natural emissions included, can be traced back to car tailpipe exhausts, and any further reduction of NOx emissions is only possible by fitting catalytic converters and using lead-free fuel."

Most of Germany's auto makers are familiar with the technology which the proposals will require. They are substantial exporters of cars to the U. S., though ironically the two major American - owned companies, Ford and General Motors (Opel), send no cars to the U. S. from Europe.

• A VW executive points out that to meet the regulations cars will cost $500 more each and use 10 percent more fuel.

"I hope the government has taken that into consideration," he says.

Some executives also foresee a massive rush to buy the last of the cheaper and more economical models at the end of 1985. They predict a major sales slump in the early part of 1986 and the possibility of having to lay off auto workers.

A political analyst at BMW comments, "It is my guess that it will take the Government the best part of next year to turn this proposal into a proper law and to come up with detailed emission standards, test procedures and so on. That will leave the manufacturers less than a year to modify and adapt their models."

The country's auto makers' association, the VDA, does not think those are the only problems. It will take officials many months simply to handle the stream of demands for new type approval for all models on the German market.

A Daimler-Benz official insists that lead-free gas must be made available in 98 octane quality.

The legal aspect is puzzling auto makers, too. No country can make such a decision independent of others. The only possible deviation is in the case of a very special and severe local health hazard, which can be solved with specific local regulations.

Whether this instance will be employed remains to be seen. Some auto makers feel that the final say will come only from the European Court in Strasbourg.

T-bird moonroof

Sky-Top Sunroofs, Ltd., St. Louis, is marketing a power moonroof to fit the 1983 Ford Thunderbird. The electrically operated, glass panel, sliding sunroof features a wide opening with an unobstructed view, the company said.

Nissan names Hankins

CARSON, Calif. — Howard Hankins has been named general auditor, assistant treasurer of Nissan U.S.A. He has been with Deloitte Haskins & Sells, an international public accounting firm, for 33 years.

Shell, Calif. bank use funds transfer for gas purchases

SAN FRANCISCO. — Wells Fargo Bank and Shell Oil Co. have created a joint venture utilizing 23 Shell service stations in the San Francisco Bay Area in a pilot program involving electronic funds transfer for purchase of gasoline and oil.

Each of the 23 station operators will become Wells Fargo customers and have a bank-provided electronic terminal installed. The station operator will have the amount of a sale credited immediately to his account at Wells Fargo, obviating need to visit a branch bank during working hours with sales slips.

Bank officials explained that "when a customer buys $20 worth of gas and his Gold Account Wells Fargo card is inserted in the terminal, the $20 will be deducted immediately from the purchaser's checking account at Wells Fargo."

A somewhat similar program is being considered by Bank of America and Standard Oil Co.'s Chevron USA. Bank of America has 5.4 million cards in its Versateller electronic network and Chevron has 2,000 stations in California.

Under the Chevron-Bank of America proposal, Chevron stations would install a newly developed NCR electronic device that can be attached to service station gas pumps.

Makers build 117,187 cars for week

Eight plants down; production slips

By Mary Beth Mayer
Staff Writer

With eight facilities closed last week, domestic car production fell 6.15 percent from the previous week's total.

Output last week was targeted at 117,187 units, down from the prior week's 124,870, but up 7.27 percent from the 109,247 built in the year-ago week.

Breakdown for the week by companies was: General Motors, 60.69 percent; Ford Motor Co., 25.71 percent; Chrysler Corp., 8.82 percent; American Motors, 3.50 percent, and Honda, 1.28 percent.

For July, the makers estimate production at 464,501, up 6.38 percent from 436,644 units built that month last year.

Year-to-date, the auto makers have assembled 3,757,099 units, a 20.57 percent gain from last year's 3,116,012.

The eight facilities which were closed last week include five GM plants, one Ford plant, one Chrysler point and the Volkswagen of America facility.

The five GM facilities — Detroit, Flint, Norwood, Tarrytown and Willow Run — are down for model changeover. By Aug. 22, all will be back in operation.

Ford's Dearborn plant and Chrysler's Jefferson plant were down last week for inventory control.

Volkswagen's Westmoreland point will return today after three weeks of downtime for model changeover.

GM's Arlington, Lansing and Lordstown points worked last Saturday (July 20). Saturday overtime at Ford was logged at the Kansas City and St. Louis plants.

UAW and Chrysler fail to agree on new contract

Continued from Page 1

expires Jan. 14, 1984.

The proposal would have raised Chrysler's labor costs from $20.81 an hour today to $25 by the end of the contract, he said.

The Chrysler proposal provided the union with a $1 an hour raise up front and then raised the Chrysler workers to current parity with their counterparts at GM and Ford in two years in wages and benefits. Cost-of-living adjustments were not included.

According to both Chrysler and the UAW, Chrysler workers currently make $2 an hour less than those at GM and Ford.

Workers at the Big Two will also get an additional 41 cent-an-hour raise by June 1, 1984, because of COLA deferred in the 1982 contract.

According to both Chrysler and the UAW, the company proposal would have put the Chrysler workers at least $1 behind those at Ford and GM when the contract expired in two years. Ford and GM negotiate new agreements in September, 1984.

• Chrysler workers gave up COLA adjustments in 1981 and are currently $1.71 behind GM. The annual improvement factor (AIF) was also eliminated then and the Chrysler workers are currently 30 cents behind GM.

Under the proposal, Chrysler would have given the workers back 70 cents in COLA and the entire 30 cents AIF.

According to Miner, the company was also willing to match the 41-cent COLA increase at Ford and GM by September, 1984, bringing the total Chrysler raise to $1.41, but still $1.01 behind the current wages of those at Ford and GM.

Besides the $1 up front wage increase, Chrysler also wanted to tie health-care benefits to COLA. That plan called for $15 million to be cut from the company's annual $370 million health-care cost. If they failed to reach that target, the shortfall would be deducted from future COLA.

Chrysler also wanted to defer COLA payments for any quarter the company doesn't make a profit. They would be picked up in the next profitable quarter.

Iacocca says he's disappointed by failure of talks

WASHINGTON. — Commenting on the failure of the Chrysler-UAW talks, Chrysler Chairman Lee Iacocca said last week, "I'm disappointed. I thought after we'd been through the fires of hell together that we'd learned a lesson.

"Who knows what will happen in the future. I can't come into a contract with locked in costs that could exceed my ability to pay."

He said he was ready to reopen negotiations at any time.

Chevrolet for Dimon

AUBURN, Ill. — David A. Dimon has signed a Chevrolet franchise and is doing business as Heritage Chevrolet, Inc.

Truck production slips for week; 45,547 assembled

Last week's estimated domestic truck production was 45,547, down 4.48 percent from the previous week's 47,682, and down 2.06 percent from the year-ago week's 46,505.

Year-to-date, the makers have built 1,296,351 units, up 8.13 percent from 1,198,937 completed in the 1982 period.

General Motors' Flint facility is down for model changeover until Aug. 8.

Volkswagen of America's Westmoreland point returns today after three weeks of vacation.

International Harvester's Ft. Wayne plant has closed. Since 1923, Ft. Wayne has built 1,527,299 vehicles.

GM's Pontiac point worked last Saturday (July 30).

Canadian output up 11 pct. for year to date

Last week's Canadian auto production was targeted at 14,239 units, up 9.61 percent from the previous week's 12,991 units and 30.76 percent above the 10,889 cars assembled in the year-ago week.

So far this year, 586,080 cars have been completed in Canada, up 11.74 percent from 524,491 built in the comparable 1982 period.

Canadian truck makers estimated last week's output at 5,097, up 36.61 percent from 3,731 the previous week—which was the year's low—and down 7.75 percent from 5,525 assembled in the year-ago week.

General Motors' Oshawa Plant No. 2 was down last week and will remain closed this week for vacation. Next Monday (Aug. 8), GM's Oshawa Plant No. 1 will begin a two-week vacation.

At the Oshawa truck facility, the first shift's two- week vacation began last week and the second shift's vacation will extend from Aug. 8 to Aug. 22.

Chrysler Corp.'s Windsor car point is retooling for the T-115 van/wagon, which it will begin to produce during the first week of October. Chrysler's Windsor truck facility resumes production today (Aug. 1) after a two-week vacation.

Volvo's Halifax plant is in the midst of a three-week vacation and will return to work Aug. 8.

Last week, Ford Motor Co. car and truck points returned to work after a three-week break and International Harvester resumed production after being down for model changeover.

First-half dealer decline is 76; lowest since 1977

By John K. Teahen Jr.
Managing Editor

Stronger sales and an improving business climate brought a high degree of stability to the domestic dealership population during the first six months of this year.

It was another sign that the industry is working its way out of the prolonged depression.

The dealer total was down, but it was the kind of decline that the industry can live with, as opposed to the monumental slides of the past three years.

The semiannual AUTOMOTIVE NEWS census found 20,723 dealerships handling domestic makes of passenger cars on July 1, a drop of 76 from the 20,799 counted at the beginning of 1983.

It was the smallest first-half dip since 1977 which saw a loss of 72, and it was only a fraction of the 556 outlets that faded away in the first six months of 1982.

Going back to the beginning of the current auto slump, the industry lost a staggering 930 domestic-car locations in the first half of 1980 and another 325 in the same period of 1981.

The quarterly results also were favorable this year. There was a decline of 48 outlets in the first quarter of 1983, and that was cut to 28 in the ensuing three months. It was the best second-quarter performance since 1973.

And it was the lightest loss for any quarter since the fourth stanza of the halcyon year of 1978.

The quarterly downturns of 48 and 28 compared with losses of 276 and 280 for those periods of 1982.

Chrysler Corp. was the star of the show in the first half with a solid gain of 62 dealerships. Ford Motor was up 10, marking the first time since 1974 that Ford has had a first-half advance.

Elsewhere, General Motors was down 75 for the half, and there were dips of 48 for American Motors-Renault and 19 for Volkswagen.

That's an aggregate of 70. A change in the number of intercorporate duals increased the industry's dip to 76 for the first half.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

If, as hoped, the long decimation of the domestic dealer ranks has ended, it's not a moment too soon. The past four years have taken a frightful toll.

On July 1, 1979, the AUTOMOTIVE NEWS census showed 23,918 establishments handling domestic passenger cars. Today's 20,723 represents a loss of 3,195 outlets, or 13.36 percent of the total.

The franchise count was up for 10 of the 15 domestic makes during the first half, with the Chrysler Corp. lines leading the way. Dodge added 85 franchises; Plymouth was up 70, and Chrysler was up 60.

At Ford Motor, there were gains of 38 franchises for Lincoln, 31 for Mercury and two for Ford. Four of the five GM makes were up. Buick added 25 outlets, and there were increases of 20 for Pontiac and 15 apiece for Cadillac and Oldsmobile.

Chevrolet had a decline of 35 franchises for the first half. Also down were AMC, 27; Volkswagen, 19; Imperial, 9, and Renault, 3.

An analysis of the franchise

Westcott SURV II seats two

The Westcott SURV II (Sports/Urban Research Vehicle) is a design prototype built on an 86.4-inch wheelbase by Westcott Design Associates, Automotive Group, Westport, Conn. The SURV seats two and has exterior panels made of Kevlar and molded ABS. Doors pivot forward and upward. Note the integrated rear-view mirrors. A running prototype will be built this month.

Allocation pinches on '84s, Chrysler dealers complain

By Joseph Bohn
Marketing Editor

While most domestic new-car dealers are currently suffering product shortages, many Chrysler Corp. dealers don't expect things to improve for them even by October.

Paradoxically, Chrysler dealers who traditionally have had to be coaxed into stepping up to new-model orders are now complaining bitterly that they can't — and won't — get enough new product in the fall.

Marvin Tepper, owner of Ace Dodge, Brooklyn, N. Y., said "there's no way to meet our overhead" with the 11 domestic cars and five trucks he's been allocated for October.

According to a contest goal set for him by factory people in the area, he's supposed to sell 29 cars and 20 trucks in October. But, with his allocation, he won't hit that. And worse, "There's no way we can make money. It's a matter of losing a lot of money," Tepper said.

"I've got seven domestic cars, eight trucks and a few imports to last me through September," he said. "September (shipments) won't be enough, and October is worse than September.

"I talked to everybody. Most of the dealers in this area are screaming that nobody has any K-cars," Tepper concluded.

On Long Island, N. Y., Reese Dodge is getting six Dodge Aries for October. But owner Harold Reese Jr., said five have already been sold.

• He added that his distribution manager tried to "pacify me" by offering him twice as many subcompact Omnis as Aries to compensate.

He said officials told him a "super advertising campaign" was being planned to help sell subcompacts.

"But traditionally we've sold

Chrysler T-115 to have 10-year rustguard

DETROIT.—Chrysler Corp.'s 1984 T-115 garageable van/wagon will have full 10-year corrosion protection for outer body rust-through. Now, all Chrysler cars carry five-year corrosion warranty protection. The van/wagon, as the Plymouth Voyager and Dodge Caravan, is scheduled to go on sale in January.

First ARNA autos go into production

POMIGLIANO, Italy.—ARNA, the joint venture between Alfa Romeo and Nissan, has begun operations here. Alfa Romeo is responsible for the manufacture and supply of engines, transaxles, steering units, front suspensions and other major components, as well as for all painting and final assembly activities, while Nissan supplies body panels, instruments and rear suspensions. ARNA manufactures the bodies of the new front-wheel-drive cars in the 1,200 cc-to-1,500 cc class.

Suit alleges brake defects and 'false responses' to inquiries; company denies charges

NHTSA sues GM to force 1.1-million X-car recall

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The Department of Justice, on behalf of NHTSA, has sued General Motors to force recall and repair of at least 1.1 million 1980 X-body cars with allegedly faulty braking systems.

In addition, the government is asking $4,027,000 in damages since NHTSA says GM filed "false and misleading responses" to its inquiries in "at least 18 instances."

J. Paul McGrath, assistant attorney general, said this is the first time the U. S. has asked for civil penalties against an auto maker for providing false data to the safety agency during a defect investigation.

NHTSA has received more than 1,740 complaints of premature rear brake lockup, with 71 complaints involving personal injury including 15 deaths.

Despite earlier recalls, which NHTSA has called inadequate, complaints from the Center for Auto Safety and Rep. Tim Wirth, Colorado Democrat, have continued. The General Accounting Office, Congress' watchdog agency, has been making an investigation and its report is now in draft form. Wirth has announced he will hold additional hearings.

In Detroit, Wiliam L. Webber Jr., GM assistant general counsel, issued the following statement concerning the lawsuit:

"We are surprised by the unexpected filing of the Justice Department suit. It is especially unwarranted in view of the fact that GM has cooperated extensively with NHTSA to develop the facts which will show clearly that no further recall or corrective action is appropriate.

"GM has voluntarily recalled about 240,000 vehicles. We believe such action was appropriate to allay customer concern. Also, we categorically deny the government's assertion of misrepresentation. Accordingly, we will vigorously defend the lawsuit."

GM also announced it had decided not to appear before Wirth's subcommittee because the corporation had been invited to discuss matters which are related to the lawsuit.

"The lawsuit was filed despite our clear understanding with counsel for NHTSA, which had been conducting an administrative investigation, that we would be given the opportunity to present our case through

Domestics climb 34 pct. in July; imports, 7 pct.

New-car sales recovery continues

By Jenny L. King
Staff Writer

The automotive retail sales recovery moved ahead strongly in July, with domestic auto makers posting a 34.18-percent sales increase and imports up 7.60 percent. Domestic sales were up each of the three periods in July and have been on the rise steadily since mid-May when they missed by only 3.12 percent the year-ago mark.

Domestic sales have been up on a monthly basis six of the seven months so far this year, and there have been sales increases in 17 of the 21 10-day periods.

U. S. auto makers sold 576,864 new cars in July, up 34.18 percent from 429,908 a year ago. It was their best July since 1979 when 688,377 new cars were moved. Year-to-date domestic sales climbed to 3,911,893, up a healthy 16.26 percent from 3,364,732 in 1982.

Import sales of 214,446 were up 7.60 percent from 199,295 in July of 1982. Import penetration plunged from the July record of

Tables on Page 43.

1982 — 31.68 percent — to 27.10 percent. Import sales for the first seven months were up 9.79 percent, to 1,428,180 from 1,300,795. They represented 26.74 percent of the total market.

Combined sales in July numbered 791,310, up 25.76 percent from 629,203 in 1982. Year-to-date sales totaled 5,340,073, up 14.66 percent from 4,665,527.

• On a daily-rate basis, domestic sales were up 39.55 percent in July. There were 25 selling days this July compared with 26 a year earlier, yielding averages of 23,075 vs. 16,535, respectively.

General Motors celebrated a 40.53-percent sales increase for the month, expanding its total to 347,966 from 247,602 in 1982 (up 46.16 percent daily rate).

Ford Motor Co. was up 16.55 percent, to 129,358 from 110,988 (up 21.20 percent daily rate). Chrysler Corp. sales of 74,785 U. S.-built cars were up 35.84 percent from 55,052 (up 41.28 percent daily rate). Chrysler sales have been up for 10 consecutive months.

At American Motors, retail sales soared 67.59 percent, to 14,007 from 8,358 (up 74.45 percent daily rate). Renault Alliance sales of 11,161 represented almost 80 percent of the American Motors July total..

Volkswagen of America was the only domestic manufacturer to report a sales decline. VWoA was down 22.32 percent, to 6,143 from 7,908 (down 19.08 percent daily rate). Honda dealers retailed 4,605 Ohio-built Accords in July.

GM earned 60.32 percent of the domestic market for the month, up from 57.59 percent in 1982. Ford had 22.43 percent, down from 25.82 percent. Chrysler edged up to 12.96 percent from 12.81 percent.

American Motors sales accounted for 2.43 percent, up from 1.94 percent. VWoA had 1.06 percent compared with 1.84 percent a year earlier, and Hon-

AMC, Chrysler, Ford, GM cover selected models

New finance programs put in place

By Joseph Bohn
Marketing Editor

Low-interest financing, although phasing down, is still there for selected General Motors, Ford Motor Co., Chrysler Corp. and American Motors models under new programs that run into September.

Ford also has a dealer cash incentive, and Nissan extended its 8.8 percent financing program on trucks from Aug. 1 to Sept. 30.

Generally, GM's new program reflects its desire to wean the public off incentives.

Its 10.9 percent financing offer on T, X and A-body models and compact pickup trucks, delivered from Aug. 1 to Sept. 21, is not as lucrative as the 9.9 percent financing offer that preceded it.

GM is offering 10.9 percent on Chevette/Pontiac 1000 (T-cars); Citation, Phoenix, Omega and Skylark (X-cars); Celebrity, Pontiac 6000, Cutlass, Cutlass Ciera and Century (A-cars); also, Chevrolet S-10 and GMC S-15 pickups.

As with previous programs, dealers give up 70 percent of their finance reserve on these models to participate. During the period, buyers of Chevette/Pontiac 1000, Chevrolet S-10 and GMC S-15 pickups can opt for a $300 rebate in lieu of the financing.

GM through GMAC is also offering an unadvertised special of 12.9 percent financing on all J-cars and F-cars and on two and four-wheel-drive 10-Series pickups on contracts of 36 months or less, Aug. 1-Sept. 21.

J-cars are the Chevrolet, Pontiac 2000, Oldsmobile Firenza, Buick Skyhawk and Cadillac Cimarron. F-cars are the Chevrolet Camaro and Pontiac Firebird. The 10-Series pickups are the standard size light-duty pickups.

• Meanwhile, Chrysler, although generally in tight supply across the board, extended its previous 9.8 percent financing or alternative $400 rebates on subcompact Horizon, Omni, Turismo and Charger models through Aug. 10.

Chrysler dropped the K-cars from the program, however, because of tight supply.

On '84 subcompacts, Chrysler is offering more product content to bolster their appeal.

The company is offering a free automatic transmission package, worth $461 at retail, or alternative free five-speed transmission/2.2-liter engine package worth $220 at retail on all '84 Omni/Horizon and Turismo/Charger models, with the exception of highline premium Charger 2.2, Turismo 2.2 and Shelby models.

To get the free packages, offered since the beginning of '84 dealer orders, the car must be ordered with other selected equipment.

GM and Ford are expected to have some special value packages like this when '84 prices are announced.

• Ford is offering both low-interest financing and alternative rebates and dealer cash incentives under separate programs that run from Aug. 1 to Sept. 21.

Ford is offering either 10.9 percent APR financing, through Ford Motor Credit only, or $350 cash rebates on eligible 1983 four-cylinder Ranger pickups sold or leased during the program period. (There's a rule of one unit per customer.)

The 10.9 percent financing is on contracts of 12 to 48 months.

Six-cylinder Rangers are eligible for $300 rebates, plus 13.9 percent financing.

Ford is also offering 13.9 percent financing on all other new '82/'83 cars and light trucks, except for Mustang/Capri and Thunderbird/Cougar, which are covered separately by dealer incentives.

The 13.9 percent financing covers only contracts of 12 to 36 months.

On the 13.9 percent, dealers get their normal finance reserve. On the 10.9 percent financing, they get 1.614 percent of the amount financed for recourse paper and 0.71 percent of the amount financed for nonrecourse paper.

Ford is paying cash to dealers on sales of Mustang/Capri and Thunderbird/Cougar.

Payments are: Zero to 30 percent of objective, nothing; 30.1-55 percent, $300 per unit; 55.1-90 percent, $450 per unit, and 90.1 percent and over, $700 per unit.

To cover extremely small dealerships with very low objectives, Ford stipulated that there is a one-unit no-pay qualifier in its program for dealerships, regardless of size, and that maximum payment on the second unit can be no more than $450.

American Motors is offering 10.9 percent financing for contracts up to 36 months on '83 Renault Alliance and Jeep CJ-5, CJ-7 and Scrambler models, sold and delivered during Aug. 2 to Sept. 21.

A 12.9 percent rate is available on contracts from 37 to 48 months, also through Sept. 21.

AMC dealers are required to give up their entire finance reserve to participate.

Datsun's 8.8 percent financing program is called "Nissan Truck Stampede" and covers new '82, '83, '83½ and '84 trucks financed during the period.

Contracts up to 48 months are covered, and Nissan pays the full amount. Customers have a choice of $300 rebates in lieu of the financing.

$300-million credit line pursued by Chrysler

By Kathleen Hamilton
Financial Editor

Chrysler Corp. is in the early stages of trying to set up a $300 million line of credit—while planning to never actually borrow the money—so it can quickly get out from under U. S. Loan Guarantee Board control.

Chrysler plans to repay the last $800 million of its government-guarantee loans on Aug. 15.

But the terms of the loan guarantees say the U. S. government will retain a lien on virtually all property owned by Chrysler in the U. S. and Canada for a year and a day after the loans are repaid.

That clause was written to avoid potential problems in bankruptcy court, according to a spokesman for the Department of Treasury. In some cases, a judge may order creditors to pay other creditors of a bankrupt firm with the funds they received recently from the defunct firm.

At the time of the guarantees, bankruptcy was a very real possibility for Chrysler.

Although it is healthier now (and, in fact, has just turned in two record profit quarters), the loan board said it would waive the provision on the liens only if one of two conditions are met. Either Chrysler must issue $200 million worth of bonds in the public debt market or it must get $300 million in a bank line of credit.

• The latter is preferable at this point because of interest rates. Talks with bankers are in such an early stage that it is unclear whether it will cost Chrysler anything to get this line of credit it doesn't plan to use, according to a company spokesman.

A bank line of credit for Chrysler is considered somewhat of a milestone in financial circles. Since the first government-backed loans were issued in 1980, Chrysler hasn't been able to shop for credit like other companies.

In these recent negotiations, the bankers approached Chrysler, not the other way around, the spokesman said. That is another novelty for the resurrected company.

The line of credit is expected to be firmed up perhaps six months from now, after $1.2 billion worth of Chrysler Financial Corp. debt is restructured.

Getting rid of the liens is an attempt to get Chrysler back into the private sector, not necessarily an attempt to woo a partner.

"We will do that by becoming more profitable," the Chrysler spokesman said, citing Chairman Lee A. Iacocca's past statements to that effect.

Telstar from Ford of Australia

Ford Motor Co. of Australia, Ltd., has introduced the Telstar, a front-wheel-drive, two-liter sedan which is based on the Mazda 626.

Chrysler is seeking delay in U. S. sale of stock warrants

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Chrysler Corp. will ask the government to postpone selling the 14.4 million Chrysler stock warrants it holds until Chrysler seeks a Congressional review of the matter.

Iacocca is sending a letter to Treasury Secretary Donald Regan asking for the postponement.

After Regan informed the auto maker that the Chrysler Loan Guarantee Board had decided to sell the warrants in open-market bidding, Chrysler Vice Chairman Gerald Greenwald told a House Banking subcommittee that the decision was the "wrong example of how to conduct an industrial policy."

It was expected that details of the bidding procedure could be made public this week.

The government received the warrants as part of the Chrysler loan guarantee package in 1981. Each warrant permits the holder to purchase one share of Chrysler common stock for $13 by 1990.

Chrysler stock was selling for $5 a share when the warrants were issued. It closed at $26 last Thursday. The Chrysler warrants were selling at $17.50 when Greenwald spoke to the subcommittee.

The decision to sell the warrants was announced following Treasury receipt of an unsolicited bid from Shearson-American Express. Shearson reportedly offered the government $300 million for the warrants, $50 million more than a buyback proposal made by Chrysler.

The bidding announcement drew immediate criticism from the auto maker. Chrysler Chairman Lee A. Iacocca said he was "shocked."

Chrysler had earlier made shock waves of its own, first by suggesting the government forego a profit by simply handing the warrants back to the corporation, and then by announcing it would pay off its remaining debt seven years ahead of schedule.

During the House Banking Subcommittee hearing, Greenwald conceded the warrant giveback idea was a bad one.

Prof. William J. Abernathy, management of technology professor at Harvard University; Martin L. Anderson, of M.I.T.'s Future of the Automobile Program, and Maryann Keller, auto industry analyst from Vilas-Fischer, all expressed doubts about the government's decision in terms of promoting Chrysler's long-term profitability.

Subcommittee Chairman John J. LaFalce, New York Democrat, said he intended to have discussions with the loan board concerning the warrant sale.

He said, "I wish the loan guarantee board had consulted this committee before making its decision to go to the market."

Greenwald told the subcommittee, "The government's role should not be to maximize profit, but rather to use levers to move that company away from assistance promptly, away from risk."

• Greenwald said the government had abandoned the "equality of sacrifice" that had made Chrysler a success and that Chrysler's unions, suppliers and bankers could soon follow suit. Those demands could turn money away from badly needed product and plant investment, he said.

Suggesting that the government at least speed up the expiration date of the warrants so they would be exercised in six months instead of seven years, Greenwald said any modification of the present plan would be an improvement.

Industry analysts appeared sympathetic to the Chrysler case. Keller told the subcommittee "the warrants are a continuing disadvantage to the company" and "an investor doesn't want to think that his interest in the company is going to be diluted by exercise of the outstanding warrants."

But in a letter, Regan told Iacocca the government had an "obligation to deal with the warrants in a manner that is fair to the interests of both Chrysler and the American people."

Congressmen eye warrant proceeds for retraining

WASHINGTON. — Proceeds from the sale of the Chrysler warants should be used to retrain laid-off UAW workers, 19 members of the House Banking Committee told President Reagan last week.

The congressmen, who have oversight powers governing the Chrysler Loan Guarantee Board, said in a letter to the President:

"There is no doubt that the entire auto industry is in transition. Since government-guaranteed loans played such a vital role in helping Chrysler begin this transition, it makes eminent good sense to us to use the 'rescue fee' — as the warrants may be viewed — to help those people who will give up the most in the industry's transition."

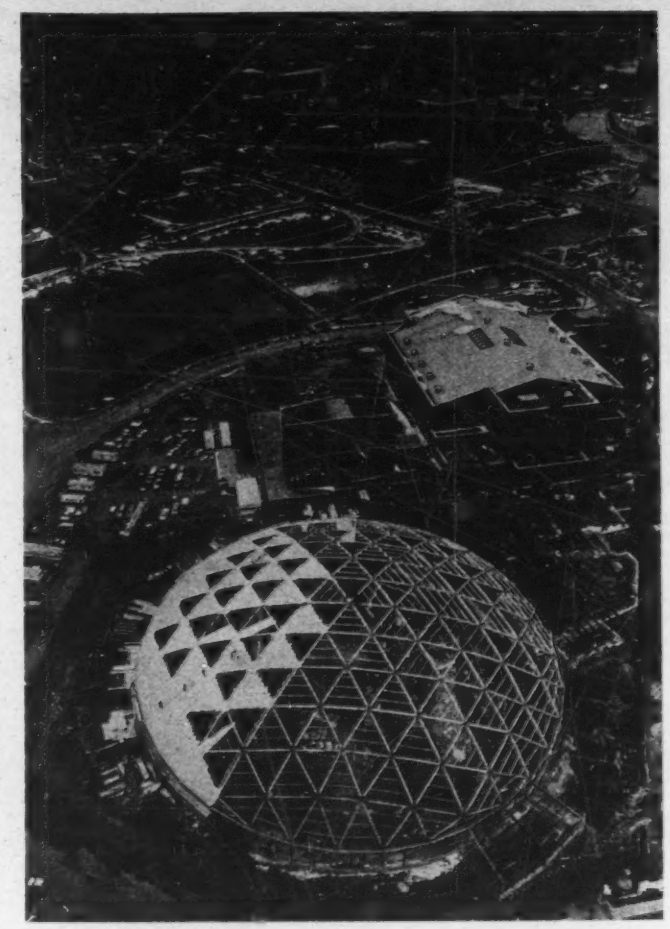
The congressmen said that many of the jobs that have been lost have been lost permanently.

The letter did not indicate how the workers were to be retrained, nor did it express dissatisfaction with the loan board's decision to sell the warrants.

Buyer gets new truck, dealer gets his goat

AVON, Ill. — When Pat McKinley, operator of Avon Motor Sales, Inc. (Chevrolet-Oldsmobile) here, advertised "We trade for anything," Richard Frakes took him up on the deal.

The result: The dealer took a two-year-old nanny goat in trade and Frakes drove away in a new Chevrolet pickup.



Flint's AutoWorld

Major construction for AutoWorld's $70 million facility in Flint has been completed. The entertainment center, which is a tribute to the automobile, is slated to open July 4, 1984.

GM donates $1 million to AutoWorld

FLINT. — A $1 million donation from the General Motors Foundation kicked off a $10 million fund-raising campaign to complete financing of AutoWorld, an urban entertainment center dedicated to the auto.

Major construction for the $70 million facility has been completed, and the center is expected to open July 4, 1984. It is expected to draw more than 900,000 visitors in its first year of operation.

The C. S. Mott Foundation has already contributed $11 million to the AutoWorld project. Other funding has been provided by the city, state and federal redevelopment funds as well as some private sources.

AutoWorld is part of a new generation of entertainment centers providing a blend of theme parks, science centers and museums.

When completed, AutoWorld will include a dome 70 feet high and covering an area the size of a football field, with its own pine forests and river to recreate historic Flint.

At night, special effect fireworks and laser light shows will be offered.

AutoWorld is part of the revitalization of downtown Flint which includes more than $350 million of capital development during the last decade.

Shop volume up 15.6 pct. for June

Another big gain for Service Index

By Francis J. Gawronski
Service Editor

For the second month in a row, the rate of growth of service and parts business in new-car dealerships has been above 15 percent, according to the Automotive News Service Index.

In June, shop volume amounted to 115.6 percent of the business recorded in the same month the year before. The May index was 115.3 percent of year-earlier volume.

The increase in June was the biggest since January, 1979, when the combined service and parts business at dealerships was 21.1 percent over the same month the previous year.

June's increase also marked the fourth consecutive month in which service-parts volume has shown an increase over the comparable year-earlier period.

For the second consecutive month, all five indicators used in the Service Index were up impressively, led by shop parts sales, those used on both customer-paid and warranty work, which climbed 18.9 percent over the year-ago figure.

The next biggest hike was recorded by sales of parts and accessories with an increase of 18.4 percent, followed by gross profit on all labor, parts and accessory sales — the most important indicator from the dealer's viewpoint — topping last year's figure by 14.8 percent.

Total labor sales (customer-paid and warranty) moved ahead of last year's figure by 14.7 percent, while repair orders written were up 11.5 percent, the biggest jump since July, 1978, when ROs topped the year-ago volume by 16.9 percent.

Figures used in the Service Index are averages compiled from dealer reports on shop operations from a cross-section of the nation's new-car dealers.

Because of June's impressive showing, service and parts business for the first six-months of 1983 jumped to 107.3 percent of the volume for the same period in 1982. Business in dealers' shops during the January-May period of this year amounted to 106.3 percent of the year-earlier business.

SERVICE INDEX
115.6*

	June, '83 vs. June, '82	6 mos., '83 vs. 6 mos., '82
Gross Profit on All Labor and P&A Sales	+14.8%	+ 9.5%
Repair Orders Written	+11.5%	+ 0.4%
Total Labor Sales (Customer & Warranty)	+14.7%	+ 7.4%
Shop Parts Sales (Customer & Warranty)	+18.9%	+ 8.8%
Sales of All Parts and P&A	+18.4%	+ 7.7%

*—Survey by Automotive News shows that dealers' service and parts business in June, 1983, was 115.6 percent of business in June, 1982. Service business in the six months of 1983 was 107.3 percent of business in the corresponding period in 1982.

All-Japanese automatic uses new techniques

Isuzu Motors, Ltd., together with Fujitsu, Ltd., and Diesel Kiki Co., has developed an innovative automatic transmission whose fuel economy is far superior to the conventional models of the torque converter type, according to the Japan Economic Journal.

Isuzu is planning to install the new transmission on its subcompact Florian Aska series this year and is ready to start selling it to Japanese and foreign auto makers and also grant them production licenses.

An Isuzu spokesman told the Japan Economic Journal that the new automatic transmission may entirely supersede the existing models — either automatic or manual.

While using the mechanism of the manual transmission, Isuzu's new automatic equipment has done away with clutch and gear change operations by employing electronics and automatic control skills, the Japan Economic Journal said.

In this joint project, Isuzu undertook the development of the total system; Fujitsu, the control unit programming, and Diesel Kiki, the development of the hydraulic operating apparatus, it was reported.

Before this development, U. S. enterprises had monopolized the area of automatic transmission design. As a result, Japanese auto and parts makers have had to tie up with U. S. companies in producing automatic transmissions.

shop talk

Continued from Page 14

pete effectively in each of those subareas.

Citing the area of shop sales, Campbell said Toyota has devised programs to attract as many as possible of the more than 5 million Toyotas in operation and their owners back to Toyota dealerships.

"To do this, we have gone to an ongoing direct-mail program to Toyota owners twice a year or we encourage the dealers to do it," he said. "We have a national program and the dealers have a program. We suggest either, or a combination of both."

Campbell said the programs offer the owners an incentive, such as a filter with an oil change or free spark plugs, to remain loyal to Toyota dealerships.

Campbell said direct-mail may not be the most glamourous way of advertising but it is the most cost-effective way of getting the job done.

He said the redemption rate on direct-mail averages 10 percent. About 90 percent of the dealers participate in the programs.

Campbell said Toyota also has a cooperative ad program with dealers, called Cheap-2-Keep.

"We co-op with the dealer. We give him the ad material with a national theme and he can advertise in newspapers and on radio and we share the advertising expenditure with him," he said.

"The dealers have to spend their money first before we will co-op with them. About 70 percent of the dealers participate in the program on an ongoing basis. We pay about 30 percent of the cost. At one time, it was 100 percent.

• "This is the thrust of what we are doing to get Toyota owners back into the dealerships," he said. "It is unrealistic that all 5 million owners will come back to the dealerships. Some will do their own work and others will go elsewhere. So we have programs to help the dealers meet these needs."

For the do-it-yourselfer, Toyota has undertaken a parts package program and is trying to get the dealers to display them properly.

"We want dealers to be mini jobbers," Campbell said. "To do this, some have to increase their parts areas, others will have to put in special counters."

Campbell said Toyota also offers special training on retail merchandising to dealers and their personnel.

He also noted that Toyota's STAR (Support to Aftermarket Repairs) parts wholesale program has been revised to include a new field contact plan, expanded training and new support material.

Under the program, dealers are allowed a discount on parts and sheet metal to make them competitive with other shops.

"Individual orders for parts can be small, in the $50 category, whereas a crash part order can run $400 or more," Campbell said. "About 280 of our dealers are involved in the STAR program, a little more than a quarter of the dealer body. The program, as all parts programs, is supported by the best parts fill rate in the industry, better than 95 percent."

• The push for higher dealer profits also includes special accessory programs "to help achieve greater sales of these high-profit items, an incentive program for remanufactured parts and, starting in September, batteries will get a boost with new pricing and a new merchandising program."

"Parts sales are big business," Campbell said. "Already, the combined sales of parts and accessories by all U. S. Toyota dealers exceed $670 million per year at the retail level.

"However, this is only 54 percent of the $1.3 billion potential market for our dealers if all 5 million Toyota owners came back to the dealerships," he said. "There is room for improvement."

There are now some 200 Toyota dealers who achieve parts and accessories sales of at least one million dollars a year and, for each of them, this is equivalent to selling an extra 420 vehicles per year. The average Toyota dealer sells $50,000 worth of parts each month, with a gross profit of 33 percent.

Campbell also noted that parts and service are not only a highly profitable business but also help sell more vehicles. Surveys indicate that customers who are satisfied with the parts and service support they receive are 40 times more likely to return to that dealer when they buy their next vehicle.

Flxible Metro transit bus

The Flxible Metro, which will be built now by an Ann Arbor (Mich.) firm, is an advanced design city transit bus which the company said meets the need for a basic, reliable vehicle for today's modern urban development.

Michigan firm completes purchase of Flxible Bus

Continued from Page 16

self to remanufacturing older buses at a cost much lower than the purchase of a new bus."

He said the service parts operations in Loudonville have been reorganized to provide better parts distribution services. Flxible has parts-distribution centers in South Plainfield, N. J., Compton, Calif., and Seattle, and is currently considering a fourth center in the Southwest.

Obert said Flxible will begin operations profitably, with a backlog of approximately 600 transit buses at an estimated value in excess of $100 million.

"General Electric Credit Corp. has established a $45 million line of credit for Flxible Corp. to fund present operations as well as planned growth," he said.

There has been no interruption of production during the transition period, he added. Flxible currently is producing three buses a day at the Delaware plant, and the rate will be increased significantly within 90 days, he said.

Besides remanufacturing older buses, Obert said the company is exploring other avenues of business that are consistent with its expertise.

"We are considering new bus models to expand our participation in the transportation industry," he said. "Among the possibilities are executive coaches, inter-city coaches as well as articulated buses."

Dana division develops system for driveshafts

Continued from Page 16

three pieces can be purchased directly or leased by Drivetrain Specialist distributors of the Dana division, Fox said. The equipment will not be available until the fall and no firm prices have been set, but it was estimated that the total system could cost about $80,000.

A new training program for distributor personnel also has been developed by DSD. The four-day course will be given at Dana's Tech Center in Ottawa Lake, Mich.

DSD supplies products and services to two basic market segments — the on-highway heavy-truck market and the on-highway mobile fluid-power equipment market.

Products are sold under two brand names, Spicer and Chelsea, through a nationwide network of about 160 independent distributors known as Spicer Drivetrain Specialists and Chelsea Mobile Equipment Specialists. They are a single source for the entire drivetrain system in the replacement-parts market.

Spicer heavy-truck products include heavy-duty clutches, axles, transmissions, transfer cases, driveshafts and driveline components.

Mobile-equipment products include Chelsea power takeoffs, hydraulic pumps and valves, air controls and a line of hoses and fittings.

posted during the first quarter of the year.

Results for the second quarter include a $1.5 million pretax LIFO benefit resulting from planned inventory reductions. This benefit was $17.7 million less than reported in the comparable period last year.

• Clark Chairman James R. Rinehart said reduced sales volume is a result of the continued depressed state of the economy, but added that the company's plant consolidation efforts are proceeding rapidly.

"We are optimistic that we will reach our goal of a 35 percent reduction in our break-even point by 1984," he said.

Domestics climb 34 pct. in July; imports, 7 pct.

New-car sales recovery continues

Continued from Page 3

da held the remaining 0.80 percent of the current year's July market.

Oldsmobile and Buick basked in the glory of record July sales, both makes beating out former sales in pinnacles reached in 1978. Cadillac announced its second-best July. Oldsmobile was up 45.60 percent, to 82,051 from 56,352 last year. Buick was up 49.33 percent, to 73,221 from 49,032, and Cadillac was up 40.52 percent, to 24,676 from 17,561.

Other makes with sales increases were: Plymouth, up 18.68 percent; Chrysler, up 47.47 percent; Dodge, up 44.95 percent; Ford, up 8.50 percent; Mercury, up 35.34 percent; Lincoln, up 38.27 percent; Chevrolet, up 28.95 percent, and Pontiac, up 50.96 percent.

Imperial sales were off 41.51 percent, AMC was down 65.95 percent and VWoA was down 22.32 percent on a year-to-year basis. Renault Alliance and Honda Accord have no year-ago figures.

Once again, it was the European auto makers that set record after record in July as their Japanese counterparts were hampered by that nation's export restraints.

Volvo reported record sales in July (up 10.80 percent) and its best month ever with 8,549 units, including tourist deliveries. Saab had its 16th consecutive month of record-setting sales and Jaguar its 33rd month.

• BMW enjoyed record sales of 5,102, up 10.72 percent from 4,608 in 1982; Mercedes was up 12.43 percent; Peugeot was up 11.30 percent; Porsche was up 128.05 percent; Volkswagen was up 18.89 percent; Renault was up 7.86 percent, and Audi was up 33.77 percent.

Top-import Toyota was up 4.10 percent for the month and 6.36 percent for the calendar year. "Our car sales are limited by low inventories — the direct result of import restrictions," said Norman D. Lean, senior vice president and chief operating officer, Toyota Motor Sales, U.S.A. Inc.

Nissan, the second-in-command among imports, had a 9.32-percent sales increase in July; Honda stayed at its 1982 level; Mazda was off 5.17 percent; Subaru was up 6.51 percent, and Isuzu was up 62.19 percent.

Imports accounted for the largest single segment of the July market with 27.10 percent of the whole. Intermediates had 26.05 percent, compacts had 17.13 percent, standards had 12.85 percent, subcompacts had 11.76 percent and luxury models had 5.11 percent.

In the domestics-only breakdown, intermediates accounted for 35.74 percent, compacts had 23.50 percent, standards had 17.62 percent, subcompacts had 16.13 percent and luxury models had 7.01 percent.

• In the final 10-day period, domestic sales climbed 24.54 percent, to 234,386 from 188,194 last year. On a daily-rate basis sales were up 38.39 percent: Nine selling days this year averaged 26,043 per day compared with 18,819 per day for 10 selling days in late July, 1982.

GM was up 29.86 percent for the period; Ford was up 5.34 percent; Chrysler was up 33.70 percent; AMC was up 96.90 percent; VWoA was off 18.02 percent, and Honda dealers sold 1,619 Accords during the period.

GM earned 59.49 percent of the late-July domestic market; Ford had 23.02 percent; Chrysler had 12.86 percent; AMC had 2.52 percent; VWoA had 1.42 percent, and Honda captured the remaining 0.69 percent.

Polyglycoat wins 11th-hour reprieve on liquidation

BOCA RATON, Fla. — Polyglycoat Corp. has won an 11th hour reprieve from creditors demanding liquidation of the troubled auto-paint sealant manufacturer.

The firm offered a reorganization plan calling for a payback of the $1.7 million in claims against the company.

Creditors must still approve the plan, but at a court hearing in West Palm Beach, Fla., the company convinced the court-appointed trustee to drop a request to convert the firm to a Chapter 7 bankruptcy.

Polyglycoat filed for Chapter 11 protection Feb. 25 as creditors and warranty claims began to mount against it.

Part of the money to pay creditors will come from the sale of the company's $1.3 million headquarters, which should net $150,000, according to court documents.

Other sources for the five-year payback include accounts receivable of $300,000, sale of a joint venture which will realize $57,000 and an IRS refund of $150,000.

Although filing for Chapter 11 cost the company in both distributors and sales (projections for 1983 call for $2.9 million in sales compared with $3.7 million last year and $13.1 million in 1980), the move was necessary to shield the company from the dozens of lawsuits it faced and to allow a reorganization, said President Gloria Fiveson.

• The company will no longer operate its application centers in Fort Lauderdale, New York and New Jersey and will shift its emphasis from a car-dealer-dependent distribution system to a network of independent Polyglycoat dealers who will service both new and used cars.

New-car owners will receive a three-year warranty with coupons for a free inspection every six months, said Dick Shalla, a former Chevrolet and American Motors dealers who is setting up the master distributorship for the Southeast for Polyglycoat under his independent firm of Automotive Custom Services, Inc.

Used-car owners, boat owners and plane owners who have their vehicles treated with Polyglycoat will receive a two-year warranty, he said.

Auction date changed

DETROIT — The General Motors auction slated for Golden Gate Auto Auction, Fremont, Calif., is moved up to Wednesday, Aug. 24 from the listed date of Wednesday, Aug. 31.

Domestic total down 76 for first half

Dealer decline lightest since 1977

Continued from Page 1

and dealership totals for the Big Three shows that each company is doing more dualing among its own makes. At Chrysler Corp. and Ford Motor, the dealership count is up, but not as much as the franchise count. At GM, the dealership total is down despite a rise in the franchise figure. This means only one thing: More dualing within the corporation.

• The first half was definitely an "up" period for Chrysler Corp.—in the dealership field as well as in the sales and financial areas. The company added 27 dealers in the first quarter and topped that with a gain of 35 in the second. Last year, Chrysler had a loss of 19 for the first half.

The second quarter brought Chrysler Corp.'s largest net upturn in its dealer total since the second quarter of 1965. It was the fourth time in the last five quarters that Chrysler has shown an increase.

The company opened the year with 3,637 car dealerships and had 3,699 on July 1.

Franchise counts at midyear were: Chrysler, 2,725; Plymouth, 2,657; Dodge, 2,577, and Imperial, 416.

In addition to its 3,699 car dealerships, Chrysler Corp. has eight that handle only Dodge trucks. They are not included in the corporation's car-dealer total or in the Dodge car-franchise total.

Ford Motor Co. had a drop of 11 car dealerships in the first quarter but rebounded with a rise of 21 in the second. It was Ford's biggest gain for any quarter in the 22 years that AUTOMOTIVE NEWS has been tabulating dealer changes on a quarterly basis.

In 1982, Ford Motor had a decline of 156 dealerships in the first half.

U. S. FRANCHISES

Copyright, 1983, Automotive News

Ford had 5,414 car dealers on Jan. 1 and 5,424 at midyear.

The July 1 franchise totals were: Ford, 4,598; Mercury, 2,612; Lincoln, 1,516.

Ford Motor Co. has 100 outlets that handle only Ford heavy-duty trucks. They are not included in the company's car-dealer total or in the Ford Division car-franchise total.

• GM had declines of 50 and 25 dealerships for the first two quarters of 1983 for a total of 75. Last year, the dips were 145 and 140 for a total of 285.

The second quarter of this year was GM's smallest drop since the second quarter of 1979.

In the first half of this year, GM's dealership total dropped from 10,160 to 10,185.

Franchise totals on July 1 were: Chevrolet, 5,160; Oldsmobile, 3,150; Pontiac, 2,965; Buick, 2,935, and Cadillac, 1,590.

American Motors-Renault opened the year with 1,589 dealerships, added one in the first quarter but lost 49 in the second to wind up with 1,541 at midyear.

The latest count shows 1,430 franchises for AMC cars and 1,319 for Renault. The figures include 1,208 stores that handle both makes, so the corporate dealership total is 1,541.

Volkswagen had a decline of 14 outlets in the first quarter and five in the second to reduce its total to 915 from 934 at the beginning of 1983.

VW's loss was lighter than the drop of 39 dealerships in the first half of 1982.

The latest domestic dealership total of 20,723 is down 401 from the 21,124 in operation on July 1, 1982.

Year-to-year changes show an increase of 34 for Chrysler Corp. and dips of 52 for VW, 103 for Ford Motor and 285 for GM. The current AMC-Renault total is 31 higher than the AMC figure of a year ago. Renault was not included last year because Renault was not a U. S.-built car at that time.

The aggregate decline for the makers is 375. A change in the number of intercorporate duals brought the industry's drop to 401.

Two ways to build it

Antique & Classic Automotive, Inc., Buffalo, offers buyers a choice with its 1937 Jaguar SS-100 replica kit. The vehicle can be assembled with engine in front, using Ford Pinto componentry, or with engine in rear, based on VW Beetle parts. Prices range from $4,495 to $5,995.

Ford says no fire hazard; refuses Escort-Lynx recall

WASHINGTON. — Ford Motor Co.'s refusal to recall 1981-82 Escort, Lynx, EXP and LN7 vehicles for possible fire hazards is in response to inquiries made by NHTSA whenever it opens what is called Engineering Analyses.

In addition to these two, there are six other Ford EAs active at NHTSA compared with 17 EAs for General Motors and 6 EAs for Chrysler Corp., out of a total of 58 involving vehicles. (Another 18 deal with the structural integrity of wheels.)

The Ford EAs in this instance involve between 345,000 and 514,000 cars.

NHTSA opens Engineering Analyses whenever complaints indicate potential safety hazards, and fire is always considered serious.

One Ford EA — based on 13 complaints to NHTSA — concerns 1981-82 vehicles because of the proximity of power steering hoses to catalytic converters. Ford said that in nine out of 13 cases, actual fires may not have occurred, just smoke when power steering fluid hit the hot exhaust system.

During early production, Ford said it found that improper routing could locate the hose closer than 1½ inches from the converter and so on April 17, 1981, it incorporated bundling straps into production and then told dealers to install bundling straps while prepping cars and during any other service on those vehicles produced before April 7.

At the start of the '82 model run, the hose was rerouted and the catalytic converter was placed farther back.

• Neither the technical bulletin sent to dealers nor the rerouting and relocation of the components on '82 models should be read as any sign of a fire hazard, Ford said. Further, Ford said, the latest reported incident was 1½ years ago.

Some 169,000 vehicles are potentially involved, and with only 13 incidents reported — which may have been only puffs of smoke — the incidence is far lower than fires in all vehicles in the field, Ford said.

The other fire-related Engineering Analysis involving '81 and '82 Escort and Lynx models involves reports of electrical short of the rear-window defroster circuit because of the wearing away of a rubber grommet. Ford's fix was to add a nylon washer next to the rubber grommet.

Involved are some 345,000 of the one million produced that have rear-window defrosters. Here, Ford also claims some alleged fires were mere puffs of smoke.

Hammer's 25th

Richard Hammer, Ed Hammer, Inc., Sheridan, Wyo., received a 25-year-dealer plaque from D. B. Domres, Chevrolet Salt Lake City zone manager.

California sales begin this month for Zoe Zipper

LOS ANGELES. — Zoe Motors, Inc., here, has introduced a line of fuel-efficient vehicles and has announced that it has a dealer network in San Francisco and throughout northern California.

The three-wheel Zipper, manufactured by Mitsuoka Motors of Japan, is powered by a 50-cc engine, and is available in single-seat, two-seat, convertible, step van and truck models. The vehicles go on sale this month.

All versions of the Zipper are priced in the $3,000 to $3,500 range and offer fuel economy in excess of 110 MPG in city traffic, according to the company.

Zoe said that it has signed dealers in Hayward, Los Gatos, San Jose, Monterey, Salinas, San Francisco, Turlock, Modesto, Daly City, Burlingame, Sacramento, Fairfield, Stockton, Sunnyvale, Danville and Vacaville.

Mack's common stock on sale at $15 a share

Continued from Page 16

truck manufacturer which builds the Classes 6 and 7 Mack Mid-Liner trucks sold in North American markets, has agreed to boost its ownership of Mack from 20 percent to 45 percent for $100 million.

Renault will assume operating control of Mack and also receive a warrant to purchase an additional 15 percent interest in Mack.

Of the 13.7 million shares on sale, 3,333,334 are being offered by Mack and 10,366,666 by Signal. Mack's proceeds, after underwriting discounts and commissions, were estimated at $46,333,343, and Signal's were placed at $144,096,657.

Mack said its net proceeds — estimated to be $46,169,143 — will be used for working capital and for capital expenditures relating to new products, productivity improvement and quality maintenance.

Mack also said it currently is not permitted under certain loan agreements to pay dividends, and added that none is anticipated in the immediate future due to the need to retain and reinvest cash in its operations. The last time a dividend was paid was in 1980.

• As Harvester plans for the start of debt-restructuring negotiations, there are indications that the builder of heavy trucks and farm equipment will be asked to sell or close parts of the farm machinery operations or enter new joint ventures to cut costs.

The current loan agreement covering the $3.6 billion debt expires Dec. 15, and serious talks on a new agreement aren't expected until early in September.

Some lenders — there are more than 200 — say they want to increase the firm's chances for a long-term survival, and they note this would mean trimming the debt to a level where Harvester could begin to pay interest at or near market rates.

There also is a possibility that if a lower debt level is achieved, a longer-term debt agreement—four to seven years—could be negotiated.

In 1982 negotiations, major concessions were made by dealers and suppliers, and lenders converted almost $350 million of debt into equity. Lenders say a larger debt-for-equity exchange — perhaps $500 million — may be possible this year, probably in the form of warrants on preferred stock convertible to common.

But some observers think Harvester will have a tough time from dealers and suppliers.

Under White's modified reorganization plan, the largest group of creditors — general unsecured creditors — would receive about 50 cents for each $1 of allowed claim.

Creditors with small unsecured claims would be able to choose a single cash distribution, while shareholders of White Motor would get one share of common stock of the reorganized company for each 10 shares they now hold.

Copies of the modified plan, the company said, will be mailed to creditors in September after a hearing in U. S. Bankruptcy Court in Cleveland.

White, which is reorganizing as an automotive components manufacturer, also said agreement has been reached on the terms under which WM Financial Corp. will acquire a minority interest in the reorganized firm and its wholly owned subsidiary, Gemini Mfg. Co.

WM Financial, under the agreement, initially would purchase 26 percent of the common stock and a part of newly issued preferred stock of the reorganized White Motor, plus a 19 percent equity in Gemini.

• In addition, WM Financial would have an option to buy more equity shares in Gemini. Preferred stock also would be issued to certain White Motor creditors. These preferred shares, as well as those acquired by WM Financial, would be subject to redemption starting in 1987.

Under the new plan, the reorganized company, at the option of certain creditors, would be obligated to repurchase the common stock issued to them.

White Motor filed for Chapter 11 status in September, 1980, after it was unable to renegotiate its long-term debt. Under Chapter 11, a company continues to operate under court protection from creditor lawsuits while it works out a plan to repay its debts.

Tiedge to handle Olds

PORTSMOUTH, O. — Frank A. Tiedge has signed an Oldsmobile franchise.

Makers build 461,046 cars for month

July auto production tops '82 total

By Mary Beth Mayer
Staff Writer

The domestic auto makers assembled 461,046 units during July, a month in which many plants ceased production for a few days or a few weeks for model changeover or vacation.

Production for the month was up 5.59 percent over 436,644 cars finished during the year-ago month, but was the second lowest month total of this year, topping only the 435,455 units assembled in January.

Last week, the manufacturers scheduled 88,554 cars, a 22.93 percent drop from the prior week's 114,899 but up 16.90 percent from 75,756 completed in the year-ago week.

Plants closed for changeover to 1984 model production and inventory control accounted for the steep decline from the previous week.

Breakdown for the week by companies was: General Motors, 55.56 percent; Ford Motor Co., 31.61 percent; American Motors, 4.91 percent; Chrysler Corp., 3.57 percent; Volkswagen of America, 2.65 percent, and Honda, 1.70 percent.

So far this year, the auto makers have assembled 3,842,995 units, a 20.48 percent gain from last year's 3,189,985.

Five GM points — Detroit, Flint, Linden, Norwood and Van Nuys — were down last week for model changeover. Flint and Norwood are scheduled to go back to work today.

Ford's Atlanta and Dearborn plants were closed last week for inventory control, and the Kansas City facility worked Saturday (Aug. 6).

Chrysler closed its Belvidere and Newark plants last week for model changeover.

Ford is leader in European sales for first half

DEARBORN. — With sales of 727,000 units, Ford Motor Co. was the No. 1 seller of cars in Europe during the first half of 1983, marking the first time ever that Ford has held car sales leadership for a full six-month period, the company announced.

"Our record share of 12.8 percent is up 0.9 of a percentage point over the previous best set in 1982," said Robert A. Lutz, executive vice president, Ford International Automotive Operations. "In total, we are investing more than $1 billion in Europe on new and improved products during 1983."

Renault was the No. 2 car seller in Europe during the first six months of this year.

Latest available statistics also show that the Ford Escort is Europe's best-selling car, closely followed by the Sierra, while the eighth place Fiesta gives Ford three models in the European Top Ten, according to the company.

Industry estimates for 1983 also indicate that the Western European market, predicted at 10.12 million new cars this year, will be the largest since the record 10.329 million units in 1979.

Sport Chevrolet opens separate truck center

SILVER SPRING, Md. — Sport Chevrolet has held a grand opening for its truck center, across the road from its dealership.

The new truck center doubles the size of Sport's truck department.

Celebrating silver

Frank A. Speney, right, owner of Speney Chevrolet, Inc., West Newton, Pa., received Chevrolet's 25-year dealer award from Lester P. Schinzing, Chevrolet's Pittsburgh zone manager.

4,690 at GM to get U.S. aid

WASHINGTON. — The Labor Department has certified 4,690 former General Motors employees—2,520 at Pontiac and 2,170 at Cadillac—as eligible to apply for cash benefits, training and other assistance under provisions of the Trade Act of 1974.

The department said the certifications were made because increased sales of imported cars were a chief cause of the workers losing their jobs.

The certifications cover Pontiac workers who lost their jobs between April 25 and Oct. 1, 1982 and Cadillac workers who were laid off between May 2 and Oct. 1, 1982.

Canadian output for July dips to 12-month low

July's Canadian auto output was the lowest of any month since July, 1982.

Last month, the makers built 48,193 cars, up 3.84 percent from 46,413 completed in July of last year.

Last week, the manufacturers scheduled 12,333 autos, down 18.97 percent from 15,219 built the week before, and down 9.39 percent from 13,610 finished in the year-ago week.

Year-to-date, 599,393 cars have been completed, up 11.50 percent from 537,575 finished in the year-ago period.

At 24,419, truck production last month was down 6.15 percent from 26,018 assembled in the year-ago month and up 11.35 percent from 21,931 built in July, 1980. It was the lowest for any month since August, 1981, when 16,816 trucks were completed.

The makers estimate last week's truck production at 6,881, up 35.86 percent from 5,065 completed in the previous week but down 3.46 percent from 7,127 in the year-ago week.

So far this year, 307,306 trucks have been assembled, down 2.81 percent from 316,179 completed in the year-ago period.

General Motors' Oshawa Plant No. 2 was down last week for vacation. Today (Aug. 8), GM's Oshawa Plant No. 1 will begin a two-week break.

At the Oshawa truck facility, the first shift finished its two-week vacation last week and the second shift begins its two-week hiatus today.

Chrysler Corp.'s Windsor car point is retooling for the T-115 van/wagon, which it will begin to produce in October.

Volvo's Halifax plant returns today after a three-week vacation.

Truck production for July drops 2 pct. below '82

In July, when many plants missed one or two weeks of production as they closed for model changeover or vacation, the domestic truck makers finished 157,293 units, down from 161,807 completed in the year-ago month.

Although July production dropped 2.79 percent from last year, it rose 29 percent above output of 121,933 during July, 1981.

Last week's production was estimated at 43,926, down 4.41 percent from 45,951 units finished the previous week, but 36.42 percent over the 32,200 assembled in the year-ago week.

Year-to-date, the makers have finished 1,340,681 trucks, an 8.81 percent decrease from 1,232,205 assembled at this time last year.

General Motors' Flint plant was closed last week for its third week of model changeover and is scheduled to resume production today (Aug. 8).

Import stocks slip to a thin 26-day supply

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars, which had seemingly fallen about as far as it could without throttling sales, continued to fall during July to reach — for the third month in a row — the lowest point since AUTOMOTIVE NEWS began keeping track of the import stockpile.

The inventory of new imported cars Aug. 1 totaled 227,819, a meager 26½-day supply, down from 251,787 on July 1, a 28-day supply. A year ago, the new imported-car inventory stood at 429,663 units Aug. 1, a 56-day supply.

The inventory of new imported pickup trucks also dipped during July to a 52-day supply, compared with 54 days a month earlier, although the unit count actually climbed slightly to 88,209 from 86,555. A brisker selling rate accounted for the lower days-supply figure.

The combined imported car and truck inventory Aug. 1 totaled 316,028 units, a 31-day supply, compared with 338,342 a month earlier, which was a 32-day supply. A year ago, the combined inventory was 600,632, a 67-day supply.

• With only a few exceptions, all lines were in short supply Aug. 1. Stocks of Japanese nameplates totaled 157,464, a paper-thin 23-day supply, compared with 171,702 a month earlier, a 24-day stock.

Japanese makes and their days-supply figures Aug. 1 were: Toyota, 15; Honda, 19; Mazda, 20; Nissan, 21; Subaru, 33; Isuzu, 39, and Mitsubishi, 72. In addition, Chrysler Corp. had a 55-day supply of Mitsubishi-built cars, including Sapporo, 47; Challenger, 50; Dodge Colt, 57, and Plymouth Colt, 58.

The total number of West German cars in stock Aug. 1 was 30,594, a 25-day supply, down from 35,990 a month earlier, a 34½-day stock.

German marques and their days-supply figures Aug. 1 were: Porsche, 18; Mercedes-Benz, 23; Audi, 28; BMW, 29½, and Volkswagen, 47. VWoA also had a 67-day supply of U. S.-built Rabbits in stock.

Days-supply figures of other European lines Aug. 1 were: Jaguar, 24; Volvo, 32; Saab, 25; Lancia, 44; Peugeot, 73; Renault, 107, and Fiat, 122.

Days-supply figures for imported pickup trucks Aug. 1 were: Mazda, 26; Nissan, 33½; Toyota, 52; Chrysler Corp./Mitsubishi, 95; Isuzu, 103, and Mitsubishi, 422.

New from Volkswagen

Golf is longer and wider

Despite some disappointment that the new Volkswagen Golf, to be launched in West Germany next month, looks similar to the old one, the wheelbase has been lengthened 2.95 inches and there is a 2.2-inch increase in width, as well as a 6.7-inch stretch in length. All this has added 165 pounds to the car. The North American version is scheduled to debut in the fall of 1984. Story on Page 6.

226-outlet drop in import deals exceeds U.S. dip

By Kathleen Hamilton
Financial Editor

The domestic-car dealer networks fared better during the automotive upswing of early 1983 than did the imports which had done so well during the prolonged slump.

Still, the latest AUTOMOTIVE NEWS import-dealer census reveals a fairly good first half for the majority of import lines: 16 of the 25 increased their dealer populations, and 11 import lines registered record numbers of dealers.

There were 9,785 dealerships carrying import cars on July 1, down 226, or 2.3 percent, from 10,011 at the start of the year. Some of these dealerships also carried domestic lines, of course.

The total number of dealerships in the U. S.—those carrying domestics and/or imports—declined 227, or 0.9 percent during the first half. That represented the smallest numerical and percentage decreases since July, 1979. The figures are 24,502 at midyear and 24,729 on Jan. 1.

Most of the decrease was attributable to dealerships carrying only import lines. Domestic-car dealerships declined by only 76 (AUTOMOTIVE NEWS, Aug. 8); import-only dealerships dropped by 151, to 3,779. The loss was solely among dual-import points; the number of dealerships carrying a single import line actually increased during the first half.

• Exclusive import dealerships numbered 2,700 at midyear, up 57 or 2 percent, from 2,643 at the start of the year. The only significant changes by car line were Honda, which added 23 exclusive dealers, and Toyota, which lost 12 exclusives.

Toyota still has the largest number of exclusive dealers of any import: 666, representing 61 percent of its dealer network. Next in line is Datsun, with 640

But slower sales push days' supply to 47

Car inventory falls 107,000 units

"Boy, the domestic new-car inventory is really short."

"How short is it?"

"Why it's so short that it went from a 47-day supply July 1 to a 48-day supply Aug. 1."

Even Ed McMahon probably wouldn't laugh at that routine, but it described, at least in part, what happened to the domestic inventory during July.

The stockpile was lean enough that it began to slow the sales pace. And the slower sales pace resulted in an increase in the days-supply figure, despite a 100,000-unit slash in the unit count.

The Aug. 1 domestic new-car inventory totaled 1,102,103, a 48-day supply, compared with 1,209,000 in stock July 1, which was a 47-day supply at the higher sales pace a month earlier.

All in all, it was a much happier problem than the industry faced a year earlier, when it had 1,377,130 cars in stock, an 83-day supply.

The Aug. 1 stockpile was very well-balanced between size classes and overall would have to be considered very healthy.

• All the corporate makers opened August with lower unit counts than they had a month earlier, but Ford Motor Co. and General Motors both saw their days-supply figures advance, which accounted for the one-day industry jump.

GM entered August with a 47-day stockpile, up from 45 days a month earlier. Corvette continued to be the shortest line of all, followed closely by Olds 88. The J-cars were in short supply and so were most Oldsmobiles. The GM total included about 200 Pontiac Fieros.

Ford Motor Co. trimmed its unit count substantially during July, but opened August with a 49-day supply, up from 48 days

Table on Page 44.

a month earlier. Ford's biggest seller was also its shortest in supply and Escort sales were hampered by lack of stock.

Chrysler Corp. had a 48-day supply Aug. 1, compared with 56 days a month earlier. The Imperials were just about gone, and Chrysler was in good inventory position.

American Motors had a 52-day supply Aug. 1, down from 55 days a month earlier. Most of the AMC cars in stock were Alliances and Eagles, as the supplies of Spirit and Concord dwindled away. It also included about 1,600 of the new Encore, not yet introduced.

Volkswagen of America had a 67-day supply of U. S.-built Rabbits Aug. 1, up from a 47-day stock July 1.

• The Aug. 1 domestic new-car inventory was divided this way: GM, 59.85 percent; Ford Motor Co., 23.05 percent; Chrysler Corp., 12.97 percent; AMC, 2.63 percent, and VWoA, 1.50 percent.

A month earlier, the domestic inventory was divided as follows: GM, 55.09 percent; Ford Motor Co., 25.72 percent; Chrysler Corp., 14.84 percent; AMC, 2.86 percent, and VWoA, 1.49 percent.

Supplies by size class were little changed from a month earlier, and the segments were again in good balance.

The industry had a 44-day

breaking news

Chrysler repays loans; Michigan group strikes

NEW YORK.—Chrysler Chairman Lee A. Iacocca Friday handed a check for $813 million to a banker here in a seven-year-early repayment to Chrysler lenders of loans guaranteed by the U. S. government. Meanwhile, at Chrysler headquarters in Highland Park, Mich., UAW amalgamated Local 412 pickets slowed gate traffic. A union unit of skilled workers, including model makers and painters, struck over health and safety issues, merit raises and outside contracting.

U. S. recovers compact truck market

PONTIAC.—A top General Motors sales official has declared a U. S. victory over Japan in the compact pickup truck market. U. S.-built trucks took more than half of the small pickup market in the first half of 1983, a market formerly owned by imports for more than a decade, according to Duncan A. Brodie, general director of truck sales for GMC Truck & Coach Operation. In the first half, compact truck sales totaled 512,290. Of these, 301,242, or 58.8 percent, were domestic.

Factory offers tech support, too

Early Porsches to get own parts operation

By Francis J. Gawronski
Service Editor

OSAGE BEACH, Mo. — The formation of a new venture to supply parts to owners of early-model Porsche cars has been announced by Peter W. Schutz, president of Porsche AG, Stuttgart, West Germany.

According to Schutz, the new company, Porsche Special Products, Inc., will serve the market for obsolete parts and technical support through selected existing channels, with primary reliance upon franchised dealers and their distributors and importers worldwide.

Charles A. Stoddard, president and chief executive officer of Stoddard Imported Cars, Inc., Willoughby, O., will serve in the same capacity for Porsche Special Products. Schutz is chairman of Porsche Special Products, an independent company controlled by Porsche AG shareholders.

"This is a very significant step for the owners of early-model Porsches around the world," Schutz said. "In general, parts that have been 'out of production' for more than seven years will be included.

"Porsche had made a total commitment to preserving the enduring value of its older models through maintenance, repair and restoration," Schutz said during the annual Porsche Club of America "Porsche Parade" here.

• Stoddard has been affiliated with Porsche as a dealer since 1957.

"At that time, we were primarily a new-car dealership," he said. "Through my personal interest in restoring and racing, I realized the opportunity in concentrating on early Porsches."

He said supplying parts and service for the early-model Porsches — the 1950s and 1960s — grew to be a substantial part of his dealership's business.

"I have spent a lot of time over the years in Stuttgart, trying to get a supply of parts for my early-model Porsche customers," he said, "and emphasizing to one and all that these early Porsche parts are important to the total Porsche franchise and, properly organized, could be a profitable business that was worth pursuing.

"Our announcement today (formation of the company) reflects that this growing requirement of the Porsche franchise has not been overlooked by the Porsche management and its shareholders," Stoddard said.

According to Stoddard, the implementation of the worldwide Porsche parts program required a complex series of related companies.

A holding company, Porsche Enterprises, Inc., of Delaware, was formed by the Porsche shareholders as a totally independent entity from the Porsche AG organization.

• Porsche Enterprises acquired the right and obligation, according to Stoddard, to service the market for Porsche parts and accessories "that have not been used as a component in the production of Porsche automobiles for seven years or more" — an objective that will take from two to three years to implement fully.

Porsche Special Products was then formed as a wholly owned subsidiary of Porsche Enterprises to operate the parts business. Stoddard Imported Cars was acquired by Porsche Enterprises, providing Porsche Special Products with a base of operations.

"According to the best records we can compile, 375,000 Porsche cars have been sold in the U. S. since they were introduced in 1950," Stoddard said.

"Of these, about 200,000 were imported prior to 1974 and, therefore, have some components not currently being supplied by the factory," he said. "We have no absolutely accurate way of knowing how many of these earlier-model Porsches are 'survivors,' but we estimate the number conservatively at over 100,000."

When fully implemented, Porsche Special Products will offer more than 20,000 items throughout the world — including everything from upholstery, glass, body trim and sheet metal to exchange engines and transmissions and mechanical components.

• Many of these parts will come from existing world inventories that will be consolidated by Porsche Special Products. Stoddard Imported Cars' inventory of 15,000 parts and its list of 24,000 customers also will be merged into Porsche Special Products.

When necessary, Porsche Special Products will supplement inventories by manufacturing parts, using original specifications and engineering drawings and utilizing manufacturing capabilities of affiliated companies in Austria, as well as the Porsche factory itself.

Porsche Special Products will supply, work with and complement the existing worldwide Porsche distribution network, including Volkswagen of America and its franchised Porsche-Audi dealers in North America, according to Stoddard.

"We see a viable market worldwide for early Porsche parts," Stoddard said. "The early Porsche parts business of Stoddard Imported Cars alone exceeded $1.5 million in 1982 in sales that people thought didn't exist."

Converting the Cougar

Armbruster/Stageway, Inc., Fort Smith, Ark., has delivered its first new-style Cougar convertible. The conversion features a power top with insulation pad and full headliner plus power quarter windows and a full-size rear seat. Conversion time is approximately four weeks, the company said.

Import pace to be speeded up

Bricklin appoints two distributors

By John A. Russell
New York Staff Writer

BALTIMORE. — Two distributors covering three distribution areas have been named by Malcolm Bricklin's International Automobile Importers Inc.

The remaining distributors, at least covering the areas westward to the Rocky Mountains, probably will be announced next week.

John Bednarick, the first distributor for the importing arm for Pininfarina and Bertone automobiles, obtained another distributorship. In addition to the previously announced area covering the Mid-Atlantic states, Bednarick also has the distributorship covering the Southeast.

For New York and New Jersey, IAII appointed RVD International Distributors, Inc., Ramsey, N. J., headed by Ray Van Doren and Leigh Rzasa.

Bednarick and Rzasa were present last week at a public introduction of the cars here at the port facility.

Bednarick said he has about 25 dealers in both distributorships. The two distributorships are called South-East International Automobile Importers, Inc., and Mid-Atlantic International Automobile Importers, Inc. Both are headquartered in Accokeek, Md., though Bednarick said he intended to move the headquarters of South-East International in the near future.

Bednarick also is a director of IAII.

The two distributorships give Bednarick responsibility for 12 states. Bednarick anticipates eventually having 100 dealers in the distribution areas.

For Rzasa, the goal is 50 dealers for the two states. Now, her distributorship has 17 dealers.

Rzasa said she received 100 cars during the past week, and will have them out to the dealers shortly.

At least for RVD International Distributors, this will mean four cars per dealer, two of each model.

The company is looking for dealers, and she said that the reaction has been good.

Her partner in this venture, Van Doren, the president of RVD, also heads Ramsey Auto Imports, which was the largest Fiat dealer in the nation.

• One dealer from New Jersey present at these ceremonies, was Robert Senior, Three County Volkswagen, Lyndhurst, N. J. He was the first New Jersey dealer signed. He said he believed the cars would sell. From what he saw at the port, he said, the cars were "well done."

States included in Bednarick's two distributorships are Deleware, Maryland, the District of Columbia, Virginia, West Virginia, North Carolina, Georgia, Alabama, Mississippi, Tennessee and Kentucky.

Bricklin, chairman of the board of IAII, said after the meeting the company has already brought in 500 to 600 cars since the middle of last month and is not planning to speed up the pace of importing.

• Talking about the distribution system after the meeting, Bricklin said that distributors must have letters of credit in amounts from $3.6 million to $10.8 million. The dollar amounts vary by distribution area since distributors have to guarantee they have three months supply of cars and parts on hand at all times, depending on their market.

Bricklin also confirmed that he was looking at other lines to import. He said this will be done under the umbrella of the parent company, Bricklin Industries. He carefully added that no decisions have been made, though another source indicated that the company had been approached by some manufacturers.

Decision due shortly on Pininfarina imports

BALTIMORE. — A decision will be made within the next six months on which new models from Pininfarina will arrive in North America, according to George Ryder, U. S. representative for the Italian maker.

Ryder told AUTOMOTIVE NEWS that company officials are studying the complete product line, but have made no decisions as to what the next step will be. He said the decision will be made either in the fourth quarter of tnis year or the first quarter of next year.

Ryder would not reveal any specific product plans for the company, but he said that Pininfarina would not produce a car for the U. S. alone nor would it produce a car only for Europe under its nameplate.

The U. S. accounts for 12 percent of the total dollar volume of business for Pininfarina. The implication of Ryder's statement is that any new model would have to be saleable in both markets.

The fact that Pininfarina was studying new models for the U. S. was revealed several weeks ago by officials of International Automobile Importers, Inc., the independent importer for both the Pininfarina Spider and the Bertone X 1/9. At that time, these officials said new cars were probably two to 2½ years away.

As for the Spider, Ryder said the manufacturer was keeping the car current. There have been 102 engineering changes in this year's model, he said, with rack and pinion steering due this fall. When asked how long Pininfarina would continue to produce the Spider, which has been on the market for 15 years, Ryder indicated the company would continue to produce the car as long as it's viable in the market.

The U. S. market is currently expected to account for 12,000 Spider sales per year.

Seeking to keep the momentum going

AMC tailors strategy to bolster turnaround

By Ralph Gray
Crain News Service

SOUTHFIELD, Mich.—American Motors Corp. has turned around. Before, it couldn't sell cars but could make money. Now AMC is selling cars but posting losses.

That wasn't the kind of switch Renault had in mind when it bought into the fourth-place U. S. auto maker. And indeed, AMC-Renault executives are eyeing 1984 as the year to break a string of losses. Or it might be 1985, according to stock registration statements which are notably pessimistic.

Jose J. Dedeurwaerder

Is AMC out of the woods, at least?

"If you are talking about today, I say not yet," said Jose J. Dedeurwaerder, AMC president and a former Renault executive. "If you are talking short range, we have a very good chance," he stated in an interview in AMC headquarters here.

Changes along the way include selling AM General, the defense subsidiary, to LTV Corp.; expansion of the product line to cover 50 percent of the market instead of 25 percent, and a flyer at the China trade.

Basic to AMC's strategy is partner Renault's front-wheel-drive car technology and financial backing and AMC's U. S. plants, dealer network and 4-wheel-drive knowledge.

• "We will concentrate on product areas where we or Renault have special expertise — 4WD passenger cars and 4WD vehicles," said Chairman W. Paul Tippett. "We plan to move from a product lineup that covers 25 percent of the U. S. car market to one with over 50 percent coverage within the next five years. We also plan to expand our coverage of the light-truck market from the current level of 12 percent to 41 percent. The key to the strategy is consistent new-product development."

Given years like 1982, with losses of $153 million (preceded by a 1981 loss of $194 million and a 1980 profit of just $19 million), AMC needs new products.

"We need a steady stream of new products to get this company healthy," Tippett acknowledged. "We can't become the Alliance Car Co., as successful a car as the Alliance has been."

That's been part of the problem with AMC, he continued, referring to AMC's habit of stressing one product line at a time.

"In the 1970s (before his arrival), we had one product and a big poof of smoke. The company would go up and sink back, because there was nothing to consolidate those gains. There was nothing to keep the momentum going. Three or four years ago we determined we had to fix that if we were to stay a viable company.

"So the Alliance was the kickoff," he stated. "We are picking on segments of the market where we can do a better job. They've got to be big enough segments to pay the light bill. But as we get more than one marketing success, we'll start reporting a more acceptable bottom line.

• "The idea is to get to 50 percent of the market selectively, by picking areas where we bring something to the party," Tippett said.

The Alliance, with sales topping 100,000 units by a wide margin, will be followed by a hatchback version—the Encore—this fall. The senior, big Jeeps have been downsized into trimmer Cherokees and Wagoneers.

The next move is the segment above the subcompact Alliance in size to the compact or intermediate sections, said Joseph Cappy, marketing group vice president. Those vehicles will be based on Renault platforms.

"We are never going to be a General Motors—we don't have the size or the clout. But I consider us a broader manufacturer than we were in the past because we're going into market segments with the big guys," he said.

"In the past we've tried to stay out of the big competition and not get batted around, and now we've been fearlessly going forward into the lion's den. We've gotten into the most competitive segment (small cars) at a time the industry was moving away. We pop in there and in six months we're the fourth best-selling nameplate in the segment" with Alliance. "That's a fantastic performance," said Cappy.

• It is on the Jeep side that AMC spots some profitable segments.

"The truck business is clearly the arena that is going to be a pot of gold for us," Cappy said. "Not only are there higher profit margins on trucks, but consumers are equipping them as lavishly as they do cars in terms of option loads."

Jeep with its 4WD doesn't have a modern pickup truck, but plans a compact pickup from the downsized Jeeps. "We're competing now with Jeep 4WD and that restricts us to 25 percent of the light-truck market. About 75 percent of the market is available to us if we have a two-wheel-drive pickup—that's where the profitability strength of Ford and GM rests—in their truck business. We've got the (Jeep) reputation. All we need now is the product," Cappy said.

AMC, to attain profitability, figures it must go to 4 percent of the passenger car market and an 18 percent share in 4WD. It is running 3 percent of the car market, thanks to the Alliance, and looks to the new Jeeps to improve its 1982 share of the 13.2 percent of 4WD. In total, AMC has to get 5 percent of the vehicle market, said AMC president Dedeurwaerder.

"If you cannot reach 5 percent of the market, you are always going to be vulnerable—and that's what AMC was before," he said.

Not all of the new product has to be built in the U. S., as are the Alliance and Encore. AMC can import entire cars from Renault as it does for the low-volume Fuego and 18i, he said.

"That's all the partnership is with Renault—an access to the big shelf (of product)," Dedeurwaerder stressed. That means Euro sedans may be in the picture, but AMC has no plans to get into the luxury car market. "We are not going to have a Cadillac," he said. Cappy sees a target of 500,000 vehicles as feasible, using Renault platforms to cut development time and costs.

A lot depends on the economy, said Dedeurwaerder. He views the current rise in auto sales skeptically.

"Everybody is saying things

An Olds 98 . . . plus 46 inches

American Pullman Coachbuilders, Inc., Brooklyn, N. Y., has introduced an Oldsmobile 98 limousine, stretched 46 inches. At a price of $38,500 to the dealer, the package includes astro-roof, convenience package, a garbage disposal, power glass and privacy dividers, separate climate controls, bar with beverage service and ice chest and dashboard-controlled air-shock suspension system.

Jury awards $10 million in '79 death by robot unit

DETROIT. — A Circuit Court jury here awarded $10 million to the family of a Ford Motor Co. employe killed on the job by a robotized storage system in a foundry.

Robert N. Williams, 25, was a core fitter taking inventory of empty carrier vehicles in an automated high-density storage area when he was killed in January, 1979.

The defendant was Unit Handling Systems Division of Litton Systems, Inc., the storage system supplier. Ford was a third-party defendant.

Robot safety has been an area of growing interest as installations increase and reports of injuries and deaths rise.

The court was told Williams was hit behind the right jaw with a force of 2,420 foot pounds during any one of several passes made by an automated vehicle through the multilevel storage area.

The Ford Michigan Casting Center, Flat Rock, Mich., now closed, was the scene of the accident. It produced engine blocks and components.

Before the trial, the dead man's family had asked a mediation panel for $1.5 million. It is expected, therefore, that Judge Charles Kaufman will trim the size of the award.

Mercedes 540-K wins top award at Meadowbrook

ROCHESTER, Mich.—A pristine 1934 Mercedes-Benz 540-K cabriolet was selected as the most outstanding car at the fifth annual Concours d'Elegance at Meadowbrook Hall.

The car, owned by John Willard Marriott Jr., Chevy Chase, Md., was selected by judges for the honor from among the 160 classics on display. It also won the president's champagne trophy as the best open car.

The Peoples' Choice award went to a 1932 Reo Royale convertible owned by Thomas J. Lester, Deerfield Beach, Fla.

The Dean Eklund trophy for the best closed car went to a 1937 Cord Custom Beverly sedan owned by Barbara Yant, Dearborn Heights, Mich.

Judges selected a 1963 Ferrari 250 GT/L Lusso, owned by Robert E. Larivee Sr., Pontiac, as the best sports car, and a 1934 Cadillac V-16 Custom convertible, owned by John Freeman, Chicago, as the best featured car (Cadillac this year).

The concours attracted more than 8,000 persons.

Texas package: A Rolls-Royce and a helicopter

MIDLAND, Tex.—Ken Hamilton, general manager of Regency Motor Cars, a Rolls-Royce and Aston Martin dealership here, is pushing a promotion package that is designed to answer every local transportation need of his customers.

Hamilton, who sold 17 Rolls-Royces within three months, is now offering a Rolls-Royce and a Robinson R-22 helicopter for $140,000.

He kicked off the promotion with a helicopter air show, during which purchasers of the package were offered a helicopter license training course at a school in nearby Odessa.

Hamilton said that Rolls-Royces and helicopters are "great ways to beat the traffic."

Automotive News analysis of new-car registration based on R. L. Polk & Co. statistical report.

May total is 772,842

Registrations best since early 1980

By Jenny L. King
Staff Writer

New-car registrations in May were the highest since March, 1980, and were up 9.18 percent from May a year ago.

According to statistics prepared by R. L. Polk & Co., U. S. new-car registrations grew to 772,842 this May, up from 707,869 for the same month, 1982, and up 6.10 percent from 728,409 in April, 1983.

Registrations of new domestic-built cars totaled 557,564, up 7.48 percent from 518,746 a year earlier, and up 7.18 percent from 520,198 the preceding month.

Import registrations were up 13.83 percent, to 215,278 from 189,123 in May of 1982. Imports accounted for 27.85 percent of the total market, up from 26.72 percent a year ago.

Record import penetration for May was 30.58 percent, notched in 1981. The recent 27.85-percent share was lowest since November, 1982, when imports accounted for 26.64 percent.

For May, Chrysler Corp. and the combined imports improved their shares of the market as American Motors, Ford Motor Co. and General Motors yielded.

GAC Ireland's double decker

Designed for service in international urban markets, GAC Ireland's 31.5-foot double-deck bus carries up to 84 passengers. The company also markets a single-deck city bus, a school bus and a model for use on intercity expressways.

Irish bus firm acquired by General Automotive

ANN ARBOR, Mich.—General Automotive Corp. has acquired all of the outstanding shares in Bombardier (Ireland), Ltd., from Bombardier, Inc., Montreal, Quebec, Canada.

The new company will be known as GAC Ireland, Ltd., a wholly owned subsidiary of General Automotive. William H. Kretz will continue as managing director of the new company.

General Automotive was the founding partner of the joint venture which manufactures buses for the Irish Transit Authority (C.I.E.) and export markets. An equity holder, GAC has been responsible for the startup and management of the operations in Shannon, County Clare, since 1979.

GAC Ireland will continue to manufacture a full range of double and single deck city and interstate transit buses for both Irish and export markets. In the future, all buses will carry the GAC Ireland name.

The company has been delivering buses to C.I.E. since 1979 under a multi-year production contract. It is pursuing a double-deck transit bus in Baghdad, Iraq, according to George W. Steggles, president, General Automotive International.

• In adition, new export markets are being developed in the Middle and Near East, Africa and the Far East, he said, and a team of technicians currently is working on the identification of components to be sourced in Ireland for use in the company's other manufacturing operations.

Steggles said the Irish buses have gained respect as world-class competitors and have a considerable export sales potential.

"The company has and will continue to work closely with the C.I.E., the Irish Export Board (Coras Trachtala), and other Irish agencies to develop

Nov. 29-Dec. 3—21st annual show, Recreation Vehicle Industry Assn., Kentucky Fair & Exposition Center, Louisville.

July total hits 205,923, a gain of 31.4 pct. over '82

Big 3 seven-month sales up 12 pct.

A hefty increase in July retail sales by Big Three dealers, especially compact trucks, boosted the seven-month total to 1,423,142 units, a gain of 12 percent over the previous year's 1,270,762.

During the month, the dealers retailed 205,923 new vehicles of all types, up 31.4 percent over the 156,673 units sold in the same month a year ago. Significant advances were reported for all four Big Three markets.

July sales of new compact trucks, both imported and domestic, soared 61 percent to an alltime high of 95,462 units, compared with 59,282 last year, the previous high for the month.

The seven-month total for the small trucks was up 39.6 percent, from 435,20₁ units last year to 607,752.

Sales during the month by the non-captive import dealers totaled 39,250 units, an increase of 44.2 percent over a year ago. The January-July count was up 40.1 percent, from 162,457 units in 1982 to 227,644.

Dealers franchised by domestic manufacturers retailed 56,-212 small trucks in July, including the captive imports, an increase of 75.3 percent over last year's 32,059.

Through July, the total was 380,108 vehicles, a gain of 39.4 percent over the 272,744 retailed in the comparable period in 1982.

Sales of the domestic small trucks during the month accounted for 55.3 percent of the total, while they took 58.3 percent of the seven-month count. A year ago, the imports had 56.9 percent of the July total and 51.1 percent of the January-July count.

No. 1 Ford increased its sales lead over Chevrolet by slightly more than 1,000 units in July and boosted its seven-month total to 556,304, about 4,500 higher than Chevrolet's.

During the month, Ford dealers retailed 80,781 new vehicles, an increase of 37.4 percent over last year's 58,810. The total through July was 16.5 percent higher than the year-earlier 477,659.

Chevrolet reported that its dealers sold 79,546 units in July, a gain of 41.7 percent over the year-ago 56,141. The seven-month total was up 11.3 percent to 551,820 units, compared

NHTSA moves to ease truck brake-fluid rule

WASHINGTON. — NHTSA has proposed a rule to allow smaller brake-fluid reservoirs in trucks weighing more than 10,-000 pounds.

The smaller reservoirs would be permissible in trucks with hydraulic brakes, as long as they are equipped with self-adjusting brakes and brake-fluid level indicators, according to the notice published in the Federal Register.

NHTSA developed the proposed rule in response to a November, 1981, petition from International Harvester.

Current capacity requirements for brake-fluid reservoirs are too large when applied to the reservoirs for disc brakes and hamper the development of new brake systems for heavy vehicles, Harvester claimed.

The existing requirements are designed to provide sufficient brake fluid if all of a truck's drum-brake linings wear out simultaneously—something that seldom occurs, the truck builder said.

• NHTSA agreed tentatively with Harvester that "some reduction in reservoir size can be achieved while maintaining safe vehicle brake systems." It disagreed with several points the company made, however.

For instance, Harvester said that assuring partial brake operation was enough to meet the intent of the federal hydraulic brake standard.

NHTSA, however, said that a heavy truck's brakes are subject to heavy strain when the vehicle is fully loaded, and "it would not be in the interest of safety to have a portion of the brake system inoperable at these times."

Harvester also said trucks with smaller fluid reservoirs would not develop brake problems if normal maintenance procedures were observed.

"However, data generated by the Bureau of Motor Carrier Safety and state inspections indicate that maintenance of truck-brake systems is not good," NHTSA said.

Sept. 26 is the deadline for comments to the NHTSA docket.

White to produce axles upon reorganization

By Jack Walsh
Truck Editor

After White Motor Corp. emerges from Chapter 11 in U. S. Bankruptcy Court, hopefully in November, it will have a new name and will resume manufacturing operations in a narrower segment of the heavy-truck market.

The reorganized company will be known as Northeast Ohio Axle Co. and will manufacture front steering axles. White had produced these axles for years for White and Freightliner trucks. Production was discontinued in 1980 shortly before White filed for Chapter 11 protection.

Wallace Askins, White Motor chairman, said the firm will take the new name because under the truck-purchasing agreement with AB Volvo of Sweden, it no longer can use the White name in the firm or its products.

AB Volvo acquired the White truck-manufacturing rights and certain assets related to the manufacturing operations in 1981 and established Volvo White Corp., which currently produces both White and Volvo trucks in New River Valley, Va., and Autocar trucks in Ogden, Utah.

"AB Volvo had no interest in White's 79th St. plant in Cleveland, where the axles were produced," Askins said.

"We kept all the tooling and machinery to produce the axles," he said. "Under the bankruptcy code, a firm in Chapter 11 can't get a discharge of its liabilities unless it continues in business. So we're going to be in the axle business. We're already setting up operations."

The axle-manufacturing equipment was relocated in the former White engineering facilities on the east side of 79th

Truck center manager honored

Lew Rice, left, manager, Sport Chevrolet Truck Sales & Service Center, Silver Spring, Md., was recognized for "outstanding service" by George Fogarty, Sport president, at a recent celebration marking the opening of the new truck center.

Mack launches parts-service protection plan

ALLENTOWN, Pa. — Mack Trucks, Inc. has launched a nationwide program called Bulldog Parts and Service Protection, according to Donald F. Musfeldt, director of parts marketing.

The program, he said, involves an intensified commitment to parts and service assistance for all Mack customers and features in a new toll-free number which provides referral to the nearest Mack facility in the event of a special need or untimely breakdown: 1-800-262-MACK.

"Since the program's inception, hundreds of calls have been received and assistance provided by Mack distributors," Musfeldt said.

He added that virtually all Mack's distributors, branches, and service dealers are participating in the program—a number totaling more than 700 outlets across the U. S.

"Truckers wil notice special Bulldog Protection graphics on display in parts and service areas, and are also offered a new booklet containing a peel-off card imprinted with the toll-free service number," Musfeldt said. "It provides a quick reference in the event that a trucker needs service assistance.

"Trucking people are becoming increasingly aware that quality pays more dividends over the long haul than the lowest initial price and substitute parts," Musfeldt explained. "The Bulldog Protection program seeks to promote the fact that we are going allout in customer protection and service."

July total hits 205,923, a gain of 31.4 pct. over '82

Big 3 seven-month sales up 12 pct.

Continued from Page 16

with 495,649 in 1982.

GMC dealers retailed 23,459 vehicles during the month, which was the second highest July count ever and up 12.6 percent over the year-ago 20,836. The alltime high of 35,865 was hit in 1978. The January-July total was 155,472, up 7.2 percent over last year's 145,086.

• Dodge and Chrysler-Plymouth dealers retailed 22,137 new light trucks during the month, a gain of 59.9 percent from last year's 20,886. Through July, the total was 159,546 units, an increase of 4.7 percent over the year-earlier 152,368.

American Motors reported that sales of four-wheel-drive Jeep vehicles in July totaled 6,260 units, 12.1 percent higher than last year's 5,585. The seven-month count was up 11.8 percent, from 27,741 units in 1982 to 42,184.

Sales of the compact Volkswagen pickup were down dramatically for both the month and January-July period. Dealers retailed only 355 units in July, off 56 percent from the year-ago 807, while the seven-month count was down 51.1 percent to 3,633 units, compared with 7,436 a year ago.

Impressive gains for both July and the first seven months were reported by U. S. distributors of the Japanese-built compact pickups.

No. 1 Toyota said its dealers sold 13,702 units during the month, an increase of 12.7 percent over the previous year's 12,159. Through July, the total was 93,060, up 21.6 percent over the year-ago 76,503.

Nissan dealers retailed 16,158 units during the month, an increase of 76.4 percent over the year-earlier 9,162. The January-July count hit 76,858 units, a gain of 44 percent over last year's 53,359.

• July sales by Mazda dealers climbed 58.7 percent over the previous year, 6,691 versus 4,216. The seven-month total was up 79 percent to 39,936 vehicles, compared with 22,310 in the like period in 1982.

Isuzu said its dealers retailed 2,016 vehicles during the month, an increase of 19.6 percent over the year-earlier 1,686. Through July, the total was 13,141, a gain of 27.8 percent over the year-earlier 10,285.

Mitsubishi, which started U. S. distribution of its compact trucks only last fall, said dealers sold 683 vehicles during July, bringing the seven-month total to 4,649.

Mexican auto industry wants 50-pct. vehicle price hike

MEXICO CITY. — Mexico's automotive industry is none too happy with the official 11 percent authorization for car price increases.

Francisco Valenzuela, president of the Automotive Industry Coordinating Council of Canacintra (National Chamber of Manufacturing Industries), said that since there has been a 50 percent "correction" in sales, the low allowed price boost does not compensate for present production costs.

He said that for some time the automotive sector had been seeking official sanction for an approximate 50 percent increase in prices, due to escalating production costs, including prime materials and labor.

The Ministry of Commerce, which rules on price increases (and which has been unable to maintain low prices for basic foodstuffs) is not favorably inclined to a further price hike.

While no official statement has been made, an official source indicated that even the nominal allowed increase may have repercussions in causing a further slide in sales.

If auto industry demands for a 50 percent increase should be granted, it would put passenger cars outside the reach of most Mexicans, with even compacts rising to nearly 2 million pesos ($13,600) and soaring on up to approximately double this figure. The source refused to speculate that a "compromise" solution may be made.

Automotive Competitive Comparisons
and
Product Presentation Programs

SCOTTI SSDD SCHOOL OF DEFENSIVE DRIVING

These programs are designed to help those involved in the auto industry (such as advertising staff, salesmen, training managers) to better understand their vehicles or their competition vehicles.

These hands on seminars can take ride, handling, luxury, performance and other key features and translate them into first person experiences that won't be forgotten.

Programs can be conducted throughout the country.

Courses are flexible in nature and can be altered to handle small or large groups in a single day.

The Scotti School of Defensive Driving is an independent advanced driving school which has catered to the needs of business, industry, and law enforcement agencies for the past 9 years. SSDD is well known for its outstanding work in training drivers of executives and diplomats in the art of anti-terrorist/anti-kidnapping techniques.

Ford Orion, along with improved Fiesta and addition of diesel options, is crucial to the corporate plan to continue as top seller in the European market and increase its market share.

Can Ford hold sales lead in Europe?

Six leading makes running a tight race

By Richard Feast
European Editor

The question is: Can Ford hold on to its recently won lead in the European new-car market?

Unofficial industry returns for the first half of this year indicate that Ford is still in the lead. But Renault, the company it knocked from the No. 1 spot, has closed the gap.

The tight running order of Europe's Big Six auto makers has never been closer. In the first six months of this year they were separated by a mere 1.1 percentage points.

Never has the competition been so close — and in the main it is the two U. S.-owned companies, Ford and General Motors (Adam Opel), which are forcing the pace.

The preliminary figures, obtained from industry sources, show an overall 5-percent rise in new-car sales in the first half, compared with one year earlier.

They amounted to 5.755 million, most of the advance coming from just two countries. West Germany added some 148,000 sales (to nearly 1.4 million) and the UK put on an extra 139,700 units (to almost 922,000).

Most industry predictions for the year-end suggest a total of 10.2 million. Few believe sales will reach the record 10.33 million of 1979, though most companies believe that high-water mark will be beaten in 1984.

• The missing ingredient, though, is profit. The high level of selling is being achieved only as a result of tremendous sales-incentive campaigns which are costing makers and dealers dearly.

Ford sales rose 11.5 percent during the opening half-year to 726,000, a market share of 12.6 percent. Its strengths lay in continued good demand for Escort (Europe's best seller in the opening quarter) and notably greater sales for Sierra than for the old Taunus/Cortina.

According to Ford, the improvement is of the order of 70 percent, with Sierra taking around 4.2 percent of total European sales.

Renault's 12.3 percent was on the basis of 705,200 sales. Its strengths were in the R-9/11 category, which to some extent made up for weakening demand for the R-5. The R-5 is coming under increasing pressure from newcomers like the Peugeot 205, Fiat Uno and Opel Corsa in the key markets of Southern Europe. It seems unlikely the Renault model will repeat last year's individual best-seller status.

• Renault's sales accounted for a 9.3-percent fall over the same period one year earlier. It managed a slim advantage over the next two manufacturers, however.

The Volkswagen group's sales improved by 2.5 percent to 699,200, a market share of 12.2 percent. Fiat Auto's slipped fractionally (0.7 percent) to 696,800, a slice of 12.1 percent.

But the VAG picture comprised two contrasting elements — a sales decline for VW and a vast increase for Audi. VW buyers are holding back for the fall arrival of Golf II, despite some spirited incentive campaigns to keep current Golf sales buoyant.

In Bavaria, though, Audi is building at record levels to meet orders for its trend-setting 100 sedan. Its 27-plus-percent improvement in European sales makes Audi's advance the most significant in the industry in the first half.

Fiat enjoyed a good reception for the crucial new Uno hatchback in Italy, but the company's overall European standing has been held back by a decline of more than 8 percent in the vital domestic market.

• Peugeot SA (PSA) registered a 3.6-percent fall in sales to 679,900, a market share of 11.8 percent. The Peugeot 205 bolstered sales improvement, but this was more than offset by losses at Citroen and Peugeot's Talbot Division.

At 24.7 percent, General Motors' improved standing took it to 11.5 percent and 662,500 units. A great deal of the reason was the introduction of the Corsa, a new model in a new category, but Kadett, Ascona and Rekord made gains as well.

There seems little doubt that by the end of the year GM's combined Opel and Vauxhall score will have moved it ahead of PSA — European market leaders as recently as 1979. It is a reflection of GM's determined fight to be among the European heavyweights and of PSA's fragmented and collapsed strategy.

Thus the Big Six are covered by only 1.1 percent in market share difference, or a mere 63,500 units in sales terms. No other auto maker is anywhere near; at 3.8 percent BL Cars is next in the rankings.

The position is in sharp contrast to recent placings. Even in the opening half of last year the difference between No. 1 and No. 6 was 4.5 percent. In 1981 it was 5.6 percent, in 1980, 6.2 percent.

• At the end of the 1970s, at a time when PSA had just acquired the ailing Chrysler-Europe conglomerate to make it European sales leader, its advantage over GM was of the order of 7.5 percent.

When PSA lost leadership in 1980 it did so to another French company, Renault, which held it until the end of last year.

At least, it did so by most companies' definition of what constitutes the European sales area. Fiat Auto, for instance, does not take Spanish sales into its calculations because it no longer sells seriously in what amounts to a closed market. The VW group, too, is a latecomer to Spain, where its products are handled now by Seat.

All eyes, then, will be on the leading six contenders as the monthly sales returns from around Europe trickle in.

Ford's European sales and marketing chief, Robert W. Currier, thinks the company can hang on to its advantage. He even admits that the year-end target is 12.9 percent, with better than 13 percent next year.

His hand has been strengthened by the addition of small, high-speed diesel engines, the Orion sedan and revised Fiesta hatchback in recent weeks. But new models mean disruption in production plants, and the object will be to keep volumes up as much as possible during the change-over periods.

Similarly, VW's Golf II introduction after the summer break at Wolfsburg will mean a slower production build-up. Once on stream, though, and with Audi still booming, VW will be a threat.

Renault has no major new-model introductions this year. Its R-1 is in place to complement the R-9, but Renault must be concerned about the hotter competition for its aging R-5.

Fiat Auto will add the Regatta sedan (a Ritmo with a trunk) this fall. That will give sales impetus to its medium-car segment, where the Mirafiori is looking long in the tooth. Ritmo has been substantially modified, and Uno is all-new. Fiat, too, will be much more competitive toward the end of the year.

For PSA the main concerns now center on Citroen and Talbot, each of which has seen

Ford of Europe plugs gaps in lineup

New Orion, improved Fiesta, small diesel add strength

Ford of Europe's winning hand has been strengthened still further.

It has added a new model line — the Orion sedan derived from the hatchback Escort — and it has made substantial improvements to its small hatchback Fiesta.

More importantly, it has at last plugged the serious gap in its powerplant program by offering a small, high-speed diesel for the first time.

The diesel will go into Escort and Fiesta initially. And in Fiesta the diesel produces what Ford believes is Europe's most economical car which should easily average the equivalent of 50-MPG (U. S.).

The goal, says Robert W. Currier, Ford of Europe's sales and marketing vice president, is to increase the company's share of the European new-car market.

"At the moment we are No. 1. It's going to be tough to hang on to that. We've got one key competitor out there called Renault," he admits.

Robert W. Currier

Currier notes that since the first - quarter returns, Ford's advantage over Renault has slipped a little. According to statistics from one of Ford's competitors, Ford held 12.6 percent of total European sales in the first half of this year, compared with Renault's 12.3 percent.

"Our target is 12.9 percent this year," said Currier. "For 1984 it's something better than 13 percent," he explains.

Orion, Fiesta and the diesels will be crucial to the plan. So, too, will other product extensions, including the introduction of a lower range three-door Sierra (as opposed to the sporty XR4i version) and the convertible Escort, each of which will go on sale this fall.

Saarlouis and Halewood are already building Orions. The Valencia plant is expected to build the model from early next year. Cologne, Dagenham and Valencia begin making Fiestas this month (August).

However, diesels will not be available until October or November, so for most of this year Ford will be without a true contender in the one area where the bulk of Europe's diesel sales are made — the C-segment.

VW Golf, Opel Kadett, Fiat Ritmo, Renault 9/11, all have the diesel engine options which make them attractive to customers in Italy, France, West Germany, Belgium and so on. Despite this, though, Ford estimates its C-segment Escort is Europe's best-seller.

In the Fiesta segment—known by Ford as B—there is less diesel opposition. Fiat has the Uno and Peugeot will shortly bring out a diesel 205 which is reputed to be in a similar league to the Fiesta diesel as far as economy is concerned.

But the compression ignition Fiesta does return some remarkable figures on the ECE test cycle — the equivalent of 61.9-MPG at 56-MPH, 42-MPG at 75-MPH and 47-MPG on the urban cycle.

Courier concedes that Ford is late into the small diesel segment. But he adds, "I wish we'd been there earlier, but here we are and we've a hell of a good diesel.

"And I'd rather be selling something that's very good. If it's taken this long to get the kind of fuel economy numbers we're getting, I'm delighted we did it."

He traces the diesel lateness to the intensity of Ford's recent model program, including Escort, Sierra and Orion. It also included the (comparatively late) introduction of five-speed gearboxes on most models.

In sales terms he believes diesels will be most popular in Italy, France and Belgium. In Belgium, for instance, practically half of Sierras sold are diesels.

But Currier thinks the diesels will have another effect. Its economy and quietness will have a major impact on Ford's total credibility.

• He believes the key markets for the Orion sedan will be in Northern Europe, particularly the UK and West Germany.

However, he has watched with interest the widespread acceptance of the Renault 9 — an Orion competitor — in what he calls the Latin markets. Italy and France, for instance, have been traditional hatchback markets. R-9 has changed that.

"Our first conception (with Orion) was in strengthening the Northern European markets, excluding France. But the R-9 lifted our sights in France and gave us more encouragement," explains Currier.

He says the moving forces be-

Booming Saab adds more capacity

Car-sales revenue tops truck figure for first time

The prospect of adding an additional 25,000 capacity would not cause too much concern for most of today's successful auto makers.

For Sweden's Saab Car Division, already building at record levels, it means putting a further 25 percent on to its volume.

It needs the extra capacity because it plans to build an additional model (probably from 1985) and because, in the words of chief executive Sten Wennlo, "There is tremendous potential for our special cars across a broad front."

Saab is one of Europe's handful of auto makers which has emerged practically unscathed from fearful sales declines across the world. The club includes the prestige houses of Daimler-Benz, BMW, Volvo and Jaguar. Membership for VW's Audi Division, now enjoying a revival, is a mere formality.

Saab has been consistently upping volume since the late '70s. In May it moved to an annualized rate of 102,000. In February it will probably move to 105,000.

Furthermore, its interim report for the first four months of this year showed a significant change. Saab passenger-car sales revenue moved ahead of that for the group's Scania Truck and Bus Division for the first time.

At $343 million, Saab sales were up 44 percent. At $287 million, Scania sales were 11 percent down. The group does not believe Saab will retain such a growth rate in the remaining eight months, and the Scania decline is part of a worldwide commercial vehicle slump that is affecting other makers just as much.

• However, Saab contributing 40 percent of group income and Scania producing 33 percent is a role reversal. The pity is that the group does not break down profits by division, but there seems little doubt that even on its very limited volumes Saab is a prosperous auto maker.

A central part of Saab's development has been the United States. Sales in the first four months were up 60 percent at 8,687. Full year expectations are for 24,000 cars, up 30 percent and amounting to a quarter of the company's output.

Wennlo declares that the aim in the U. S. is to sell more cars per dealer.

"If our approximately 300 dealers sell 10 more cars per year each it is 3,000 cars," he said. "If they sell 20 the total is 6,000."

To Saab these are substantial numbers. Wennlo believes it takes a long time to reach annual sales of 15,000. The next 10,000 are added comparatively quickly, and the next 10,000 very quickly.

Saab is still in the second stage — and believes there is yet more potential when a number of dealer open points in the Sun Belt and on the West Coast have been filled.

Wennlo admits, "There is a limitation on our segment, but within that segment we have the possibilities to take shares from our competitors. It is what is happening today, in all markets except, I think, Switzerland."

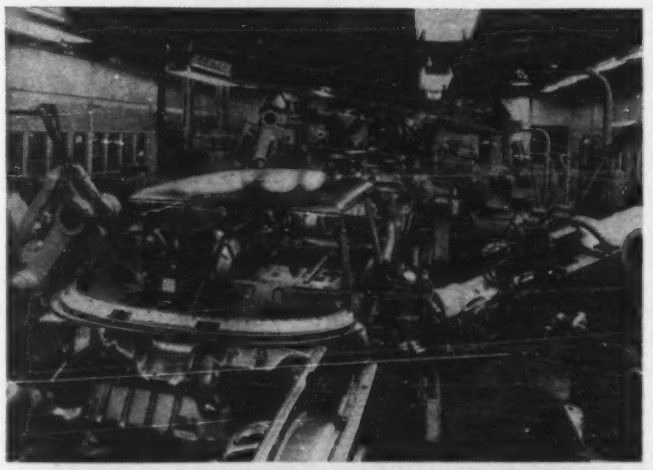
The company is making a more determined effort in Europe, too. Wennlo thinks there is room for another 5,000 sales in the UK, where Saab already sells 10,000. Italian sales — around 2,300 — are good, but they are concentrated in the North. There are a few around Rome, but none in the South.

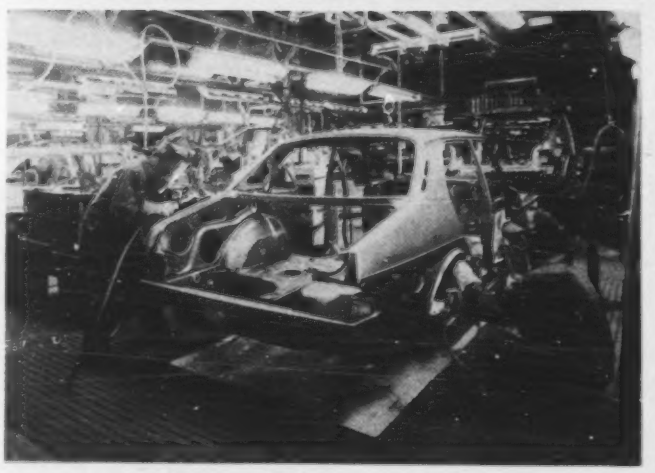
But Saab's big push is being saved for the continent's two largest markets, West Germany and France.

Last year, it sold just over 3,000 cars in Germany, where total sales amounted to more than 2.155 million. Furthermore, it has the highest percentage of luxury car sales of anywhere in Europe. But, says Wennlo, Saab is still making money there.

"We have a very small, very

Continued on Page 28, Col. 1





Photos top to bottom: Robots apply spotwelds to Saab body shells; bodies are moved between work places via driverless trolleys; body shop finishing work is done by autonomous groups at three work stations; two workers at each station do the full sequence of body finishing work in about 45 minutes.

Swedish market wide open to competition

Exports take lion's share of domestic output

Sweden's vehicle market is wide open to competition. For a country which exports so much of its production, it has to be.

In 1981, its foreign trade surplus was nearly SEK 8 billion—or more than $1 billion at today's exchange rates. Ninety percent of truck and bus production was exported, and three out of four passenger cars.

The country's domestic markets are so small that it needs to export to survive. Car sales last year were the highest for five years at 218,400. Truck sales declined for the third year at 17,400, but at nearly 1,400, bus sales were as high as at any time in the previous eight years.

Sales of Swedish-made Volvo and Saab passenger cars accounted for only 38 percent of total. The leading importer is the VW group—models imported by Saab-Scania—with around 13 percent. Ford and General Motors (Opel) have around 9 percent each.

Thus, Swedes prefer the quality small cars of West Germany to those of Japan, whose total import penetration amounts to around 15 percent.

While Volvo and Scania trucks dominate their sectors of the truck market, there is a big market for imported vans and light trucks. Volvo's trucks begin at around 7 tonnes, and Scania's at 16 tonnes. And all are concentrated at the heavy end of the market — where numbers are small and potential profits greatest.

In the first half of this year the new-car market was down slightly at 105,300. Truck sales slipped a little to 8,300 but bus registrations were down nearly a fifth at 1,050.

Recent changes in the value of the Swedish crown, particularly last October's hefty 16-percent devaluation, have helped the country's exporters. But as large purchasers of foreign components, Volvo and Saab-Scania are having to pay more for those parts.

One effect of the devaluations is to make Swedish labor rates —once the highest in the business—look less dramatic. They are still high, and the employe has to hand over a higher proportion in taxes than anywhere else in the world.

Recruiting skilled labor, a real handicap in the mid-'70s, is no longer the problem it was. A crisis in the shipbuilding industry, for instance, has provided more welders and tool makers.

Unemployment at nearly 4 percent (the total population is 8.3 million) seems low by comparison with other developed nations, but is considered very high in Sweden. Disposable incomes are slowing and the economic outlook is not so good, so the Swedish Automobile Manufacturers' Assn. does not envisage any sudden increases in demand.

Can Ford hold sales lead?

Six makes run tight race in Europe

Continued from Page 25

sales fall against a background of increased business. To a large extent much of this can be traced back to industrial disputes earlier this year — and there are prospects of more to come.

PSA wants to reduce its labor force at Talbot (part of Automobiles Peugeot) by 10 percent, or 9,000 people. Rumors suggest Citroen is also looking for similar cuts. They will be vigorously resisted by unions and sporadic or protracted disputes cannot be ruled out.

• While Peugeot's new 205 has been extremely well received, there are few other notable sales successes across the group, and suggestions are that the new Citroen BX mid-range car is proving hard to shift.

On the other hand, GM's Opel (and Vauxhall) model range is the youngest in the business. It has achieved wonders in recent months, and while there will be some slowdown in growth because the Corsa is now in place, it is expected to continue making gains.

GM's model line is now complete — and it is not due to be disturbed in any major way until the introduction next fall of a replacement for the lower-medium Kadett/Astra.

As far as national markets are concerned, in addition to the sales gains in West Germany and the UK there have been rises in Denmark, Finland, France, Holland, Portugal and Spain.

The declines have been in Australia, Belgium/Luxembourg, Greece, Ireland, Italy, Norway, Sweden and Switzerland.

The big number gains in Germany (148,200), the UK (139,700), Holland (42,000), Austria (26,200) and Denmark (13,600) were offset by unit declines of the order of 80,900 in Italy, 10,500 in Belgium/Luxembourg, 10,100 in Greece and 7,700 in Ireland.

As percentages, the most notable improvements was recorded by Denmark.

Ford broadens its lineup

New Orion, improved Fiesta, small diesel

Continued from Page 25

hind the decision to go ahead with Orion were cars like the VW Jetta, Mazda 323 and the expectation of hatchback and sedan versions of the Opel Ascona.

"We knew there was a big market walking around there — for mid-size, conservative family cars. And the market was not going away. It was growing."

Ford talks of building 130,000 Orions a year. Will it take sales away from Escort and Sierra?

Currier is remarkably frank. "It has to, clearly. There's no car that's totally incremental.

"Our task is to make sure there's enough incremental increase that it's still a good business proposition for us. If you get too worried about substitution you never do anything," he maintains.

Ford's only real concern centers on a possible large swing of buyers from Sierra to Orion. That could upset work patterns at Genk in Belgium, a dedicated plant.

The company believes the revised Fiesta will sell well across the board. The model has been changed remarkably little since its 1976 introduction — a move which was largely responsible for Ford's market share moving from 9.8 percent in 1975 to 12.2 percent in 1977.

It put Ford among the leading contenders in Europe, just as the recent introduction of the Corsa has helped transform Opel's market share this year.

Ford insiders trace the company's current strength back to that Fiesta introduction, followed shortly afterward by Escort (1980) and Sierra (1982). But had Currier expected the changes to result in European market leadership this year?

"No, frankly — though it's always been our goal," he admits.

"I don't know what market leadership means to the consumer, but if we don't have this kind of goal we will not bring the kind of products to the market that the consumers like. So, it's a worthy goal.

"Also, it's a tremendous motivation inside the company, to do better, to achieve. It gives people something to strive for and a pride in their company."

Ford acknowledges that Sierra has been the main catalyst. It is taking over 4 percent of the market, compared with around 1½ percent for the old Cortina/Taunus.

But it is not the only piece of the jigsaw, and Escort goes from strength to strength.

Currier believes the total European market will be a little more than 10 million this year — "and that may be a little conservative," he adds.

"Next year could be as high as 10.5 million, although our forecasts now run in the 10.3 million range."

Thus, either this year or more likely next year total European sales will top the record 10.33 million of 1979.

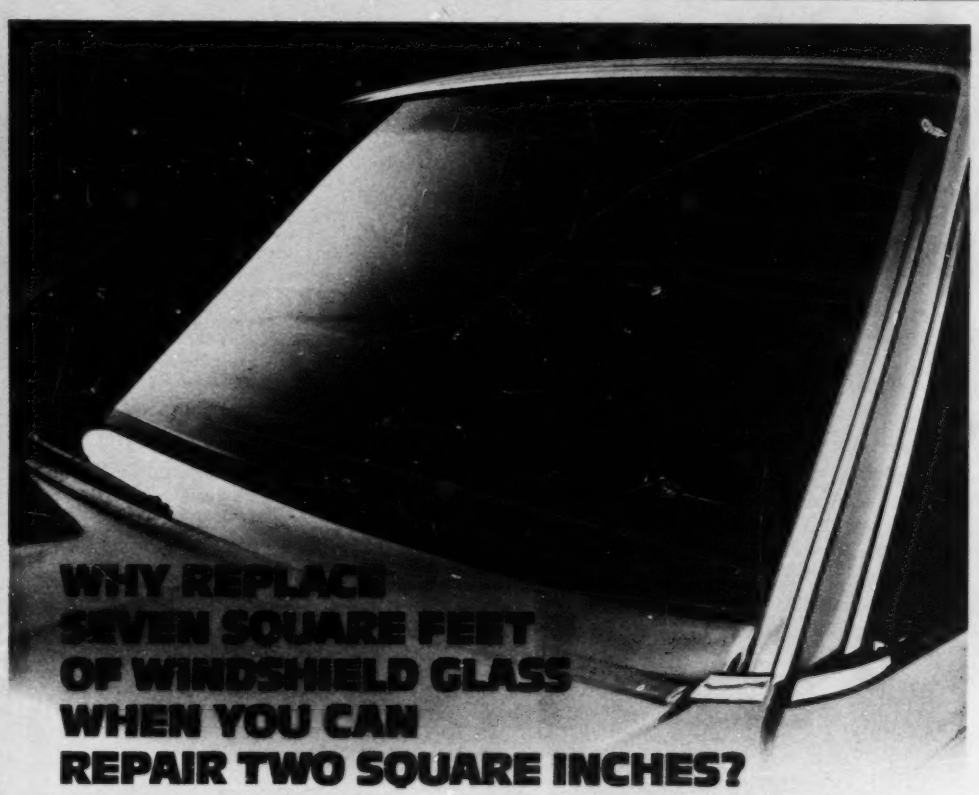
Wheels for Toyota

A Rockwell International high-low operator prepares a load of styled aluminum wheels for shipment to Toyota Motor Corp. in Japan. Toyota purchases 4,000 to 5,000 wheels per month from Rockwell for use as original equipment on 1983 Cressida models.

Gengras won't seek reelection to council

WEST HARTFORD, Conn. — E. Clayton Gengras Jr., a Dodge-Volvo dealer, announced that he will not seek reelection to the West Hartford Town Council.

Gengras, 39, said that family business commitments due to the recent death of his father, E. Clayton Gengras Sr., have made it necessary to curtail elective office activity.



It's a frequent problem when you take in used cars and trucks: stone-damaged windshields. The usual solution? Windshield replacement. But now there's a smart alternative: Novus windshield repair.

The Novus Method is a revolutionary, patented and low cost method of windshield repair. It's also a great way to boost your profits.

The procedure is simple. Just have a Novus representative repair the damaged windshields right on the premises. We have over 1,000 factory trained personnel in the U.S. and Canada, so we probably have someone in your area. Call or write us for the Novus windshield repair service nearest you.

We probably do 90% of the windshield repairs performed in North America. No one else repairs windshields like Novus. Our repair process is exclusive and patented. Incidentally, we are committed to windshield *repair*. We don't use windshield repair as a draw and then push *replacement* glass.

The benefits are clear. Your customers get a vehicle with a like-new windshield. You save the cost of a new windshield. And with insurance deductibles increasing the way they are, your trade-in customers will be less and less likely to replace a cracked windshield themselves. That means you will probably be seeing more and more of a need for Novus.

Give yourself a big break on little windshield breaks. Try Novus.

O'Keefe named director of GM facilities

DETROIT. — William J. O'Keefe has been appointed director of General Motors Facilities. He succeeds Albert T. Hastings, who retired after 43 years with GM.

O'Keefe formerly was director of Argonaut Realty, one of the GM Facilities operations. Replacing him in that post is George G. Fox, previously manager of real estate for GM Facilities.

Honda Accord restyled in Japan

Honda has restyled its Accord line for the home market. The hood line is lower, an anti-lock braking system is an option and a 12-valve engine has been adopted.

Honda boosts Accord power with 12-valve engine in Japan

TOKYO.—To upgrade the performance of the Accords sold in Japan, Honda has adopted 12-valve engines.

They are based on the unit introduced last year in the Prelude coupe, but there is a 1.6-liter as well as a 1.8-liter version, and a single carburetor replaces the twin carburetors of the Prelude.

At the same time, some changes have been mad' to the body and the ALB anti-lock braking system is now an option.

Because the new engine is lower than the old one, Honda has lowered the hoodline of the Accord, giving the three-door hatchback a sporty sloping nose. The sedans retain a low, upright grille. Some models have electronic instruments.

Apart from the use of a single carburetor, the 1.8-liter engine is almost the same as the one in the Prelude, with bore and stroke of 80x91mm. Power output is quoted as 110 HP (JIS, at 5,800 RPM — up from 97 HP at 5,300 RPM—with 110 pounds-feet of torque at 3,500 RPM.

The 1.6-liter unit has a bore and stroke of 80x79.5mm and output has been increased from 90 HP at 5,300 RPM to 94 HP at 5,800 RPM. Gas mileage is also improved slightly.

Denver firm named to handle Peugeot

DENVER. — Royal Carriage Works at D.T.C. has been awarded a Peugeot dealership. It has been owned and operated by William F. Stewart since 1974.

Judge rules against Volvo in flame-trap case

AVALON, N. J. — Working without benefit of an attorney, local resident Anthony Vinci took Volvo of America Corp. to court and won.

The case centered on Volvo's alleged failure to warn motorists properly about servicing their vehicle's flame trap to prevent a carburetor backfire from getting to the rest of the engine and possibly starting a fire.

Vinci argued that although Volvo warned its dealerships through service bulletins that the flame trap needed to be serviced every 15,000 miles, that warning was not listed in the car's service manual for consumers.

Vinci noticed there were oil leaks from his daughter's Volvo, and mechanics determined the problem stemmed from the flame trap, he said.

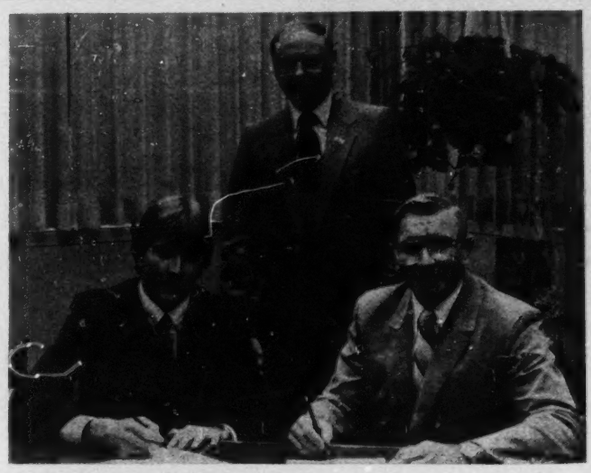
Vinci called his Volvo dealership in neighboring Egg Harbor, N. J., and told the service manager what happened. The manager knew immediately what was wrong, Vinci said, and said Volvo sent out service bulletins about the problem.

Vinci wrote Volvo and explained the problem. He also asked to be reimbursed for the repair bills. He received a letter which was not to his liking, so he filed a complaint in Small Claims Court in New Jersey's Bergen County, where Volvo of America Corp. is headquartered.

After the judge ruled in his favor, Vinci received a check from the dealership for $181.36.

Ochs signs Chevy, Olds

NEWTON, Ill. — Louis Ochs Chevrolet - Oldsmobile - Buick Inc., has been franchised here. Louis Ochs is the operator.



All in the family

A father and son signed Chevrolet franchise agreements for two separate Minnesota locations. John L. Steffens, left, will operate Steffens, Inc., Windom, Minn., while LaVerne J. Steffens, right, will run Steffens Chevrolet-Buick, Inc., Faribault, Minn. Standing is R. W. Kruse, Chevrolet's Minneapolis zone manager. LaVerne Steffens had headed the Windom dealership since 1960.

White to build steering axles after OK on reorganization

Continued from Page 16

St. after the antiquated complex on the west side was sold some time ago to a group of investors. The firm also is headquartered in the former engineering building.

Of the axle-manufacturing operations, Askins said only that "we'll keep it as lean as possible, and let it grow naturally. The staff will be very lean. We already have an agreement with the UAW."

The market for the axles will be the OEMs, Askins said. "We're looking to Volvo White, Freightliner, Nova/Bow Valley, the Canadian firm which bought Western Star, and some others," he added.

"It's a proven axle in thousands of trucks which have run millions of miles," Askins said. "It's had a long history of no problems; in fact, I can't recall even one warranty problem."

Current holders of White common shares will receive one share in Northeast Ohio for each 10 White shares, Askins said, and will have about 10 percent of the total.

The largest single shareholder in the reorganized firm will be WM Financial Corp., a holding company created in New York by a group of investors during the Chapter 11 proceedings.

White Motor creditors will get 64 percent of the firm's stock, Askins said, but will have no participation in management of Northeast Ohio.

White has reported that it owes its creditors about $300 million. White said it expects to pay about 50 cents for every $1 of allowed claims.

"That's more than most people thought they'd get when we started these proceedings three years ago," Askins said.

The lawyer for the creditors committee also noted that the proceedings have been "extremely successful in terms of payouts."

Otto Oldsmobile-Cadillac to open new facility

ALBANY. — Otto Oldsmobile-Cadillac, Inc., will open a new "state-of-the-art" $2.5 million facility here in August.

Some 18 months of research and design effort went into the 40,000-square-foot building, and the dealership will have an 800-car inventory, said Walter Otto II, president.

Irish bus firm is acquired by U.S. company

Continued from Page 16

the international market potential for products from Ireland," he added.

Cruse W. Moss, GAC chairman, said, "buses built in the Shannon plant to C.I.E. specifications are setting new industry standards for performance, reliability and quality, and we are confident of continued success in both Ireland and international markets in the months ahead."

GAC, a privately-owned company, recently purchased the Grumman Flxible bus subsidiary from Grumman Corp.

Moss noted that the Flxible transit bus averaged 4.28 MPG, the highest in a controlled fuel-economy test against five participating manufacturers.

The test, he said, was conducted by a nationally renowned laboratory in conjunction with the Transportation Research Center of Ohio under a contract from the Urban Mass Transportation Administration's office of Bus and Paratransit Systems.

Purpose of the test was to provide transit authorities with fuel-economy data for use in life-cycle cost analysis currently being used in bus procurement.

All test vehicles were standard-sized 40-foot transit buses, and included Flxible, General Motors RTS-II, Flyer Industries, GM of Canada, Neoplan USA and Gillig, as well as Flxible and GM control buses.

But 11 lines count record numbers

Import dealer total drops 2.3 pct.

Continued from Page 1

exclusives, representing 59 percent of its network; then Honda, 420 exclusives, for 52 percent; Subaru, 301 exclusives, 38 percent, and Mazda, 113 exclusives, 15 percent.

BMW has 102 exclusives, representing 25 percent of its network; Volvo, 94 exclusives, for 23 percent; Mercedes-Benz, 92 exclusives, for 22 percent; Mitsubishi, 75 exclusives, representing its entire dealer network, and Saab, 57 exclusives, for 18 percent.

Chrysler Corp.'s expanding dealer network pushed the number of captive-import duals to the highest level since Ford Motor Co. stopped importing the German-made Fiesta two years ago. Captive duals stood at 3,699 at midyear, up 62, or 2 percent, from 3,637 at the start of the year.

Gains made by imports from both Japan and Europe in dualing with domestic-car makers were offset by the loss of DeLorean during the first half of 1983.

The DeLorean network was heavily dependent upon General Motors dealers. Now that it is out of production and Consolidated International is selling off the inventory, the number of domestic dealers dualed with non-captive imports stands at 2,307, a decline of 137, or 6 percent, from the revised figure of 2,444 on Jan. 1.

The 9,785 dealerships carrying import lines on July 1 was the lowest since July, 1970, when the Japanese makes were just beginning to establish themselves as major forces in the U.S. market. This was the fourth consecutive period of declines in the import-dealer total.

The declines are deceiving, however, because Volkswagen and Renault are now making most of their sales from U.S.-made products and are therefore counted as domestic makes. If they were still counted as imports, they would boost the import dealer total by more than 2,000

The number of import-car franchises (as distinct from outlets or dealerships, which may handle more than one car line/franchise) declined 71 to 13,181 at midyear. Like the number of import outlets, the most recent franchise number is the lowest since 1970.

Losses were recorded by DeLorean, down 250; Jaguar and Alfa Romeo, down 10 apiece; Peugeot, Audi and Toyota, down 5 apiece; Mazda, down 4, and Ferrari, down 2.

Audi's dealer count has been dropping for seven consecutive reporting periods; Alfa Romeo's for 11.

The gainers during the first half of 1983 were Dodge Colt/Challenger, up 85; Plymouth Colt/Sapporo, up 70; Lotus, up 18 (under the new importer Lotus Performance Cars); Subaru, up 9; Mitsubishi, up 8; Isuzu, up 7, and TVR, up 5 (under the new importer, TVR North America).

Others to register gains were BMW, up 4; Saab, up 3; Honda, Porsche, Maserati and Rolls-Royce, each up 2, and Datsun/Nissan and Aston Martin Lagonda, each up 1. Incidentally, this marks the eighth consecutive reporting period in which Rolls-Royce either maintained or increased the size of its dealer network.

Volvo was the only maker to report no change in its dealer population this census.

The total franchise loss of 71 for the first half was one-half of one percent. Last year at this time, the loss was 1,359, or 9 percent, as Fiat, Lancia and Lotus left the market — at least temporarily.

• The import makes that registered record numbers of dealers at midyear were Dodge Colt/Challenger, 2,577, up 85 from January's record of 2,492, and the third consecutive period in which a new record has been set; Subaru, 793, up 9 from the January record of 784 and continuing a string of records that has been unbroken since July, 1973.

Also, Honda, 808, up 2 from January's record of 806 and continuing an unbroken string of records since July, 1973; Mercedes-Benz, 414, up 1 from January's 413 for the sixth consecutive record-breaking period; Porsche, 330, up 2 from the 328 of the previous two reporting periods.

Other records were set by BMW, up 4 from January's record of 403 and the 13th consecutive period in which a record was set; Rolls-Royce, 71, which matched the record set one year earlier; Maserati, 36, which tied records of July, 1981, and July, 1982.

Also, Plymouth Colt/Sapporo, 2,657, up 70 from January's record of 2,587 and the fifth consecutive period in which a gain was recorded; Mitsubishi (which makes the Chrysler Corp. captives, too), 75, up 8 from the only other census in which it distributed its own products.

Isuzu also set a record of 213, up 7 from its January total of 206 car outlets. Isuzu also has truck-only points in 20 states.

Small Mercedes, due Oct. 17, to help on CAFE

Continued from Page 2

introduction and 16,000 to 17,000 of the smaller units next year. Jordan expects the 190 to account for a little less than 25 percent of total Mercedes sales and anticipates that more gasoline than diesel 190s will be sold.

At about $23,800 apiece, that's a lot of small cars.

Mercedes will offer an optional Supplemental Restraint System (SRS) on the new 190 and 500 models, which includes an air bag mounted in the steering wheel hub and a tension-loaded belt on the passenger side.

Jordan said 10 percent of the cars will be equipped with the package, which will cost $800 to $900. Asked why MBNA is offering the package when there is so much opposition to such safety equipment, he said "we are, in effect, running a market test. It is a positive response to a sensible government approach."

In a question-and-answer session, Jordan said that for every owner Mercedes loses to another make, it gains three.

Masked psychic

Capitol Lincoln-Mercury and Richmond Honda, Richmond, Va., had a blindfolded psychic named Manlow drive a car around an obstacle course of cars at the Virginia State Fairgrounds. He covered his head with a steel blindfold, four-foot Ace bandages and a black hood for the stunt.

Second shift scheduled for Laser/Daytona

ST. LOUIS. — Orders from dealers for the Chrysler Laser and Dodge Daytona have poured in and the Chrysler Corp. Fenton plant here has announced that a second shift will be added Sept. 12, meaning work for more than 1,500 persons.

Orders have jumped to 130 percent of early production plans, and this does not include fleet and Canadian business.

Larry Schaefer, St. Louis zone distribution manager, said that "dealers are showing considerable interest and have placed their orders accordingly."

He added that the plant in Fenton, the corporation's "high-tech showcase," will build 4,000 to 5,000 sports cars per month before the second shift begins.

The Laser and Daytona will be launched officially today (Aug. 15), in ceremonies at St. Louis Assembly Plant No. 1.

On hand for the occasion will be Chrysler Chairman Lee Iacocca and Missouri Gov. Christopher (Kit) Bond.

Chrysler has invested $96 million to convert the plant for the assembly of the cars, previously coded G-24. Presently, 2,900 employes are on the payroll and the second shift will boost the number to about 4,500. Plant No. 2 will add 1,500 in September.

Extensive retooling was necessary to accommodate the production line switch for FWD vehicles. Plant conversion was completed July 18.

Manaker appointed

HARTFORD. — Barton L. Manaker, owner of Rte. 44 Volkswagen, Inc., has been named to the Connecticut State University board of trustees.

$200 million to be spent on more aggressive approach

Chrysler outlines '84 ad campaign

Continued from Page 8

front-drive, turbocharging, high technology and fun-to-drive appeal.

It shows the '84 lineup on the road. After reciting various innovations, it calls attention to Dodge introducing seven new models in the last six years, two this year and three in the next two years, claiming the nation's largest turbocharged and largest front-wheel-drive fleets.

Daytona ads use a three-page spread to talk about the "turbo charge revolution," with shots of the cockpit and the Daytona Turbo Z the lead car.

"The American sports car has just grown up," continues the ad, after pointing out electronic fuel injection, front-drive and 5/50 warranty protection.

Dodge ads for other models are "heavily deviced," for strong resemblance, according to Joseph Cronin, ad manager.

The Aries K is called "the best six-passenger car you can buy." The four-door Aries is featured in print, the wagon version in TV commercials.

Ads call attention to "great traction, room for six, solid resale, 5/50 warranty protection" and a quarter-million families who have bought it.

"The world still hasn't beaten this car," claims the headline to an Omni spread. It's "logged over 13 billion miles," has solid resale value and is backed by 5/50 warranty, continues the ad.

The 600 Series has replaced, or absorbed, the Dodge 400. Ads feature the convertibles as "the most affordable convertible" and the 600 ES is still the touring car, recalling "forgotten pleasures of the American road" and competing against imports.

Charger and Shelby are "the first front-wheel-drive American sports coupes" with the "2.2-liter destined to become a legend," according to Car and Driver, which ads quote.

• While regular product ads break Sept. 25, Iacocca's corporate campaign runs from Sept. 9-29. He thanks the public for "help(ing) us stand on our own two feet" and predicts America will regain leadership in technology "by regaining the courage to invest in brains, plants, products that represent the future, not the past."

Iacocca also previews the Chrysler Laser, Dodge Daytona, Dodge Caravan and Plymouth Voyager.

"To turn a company around, you don't just need a lot up here," says Iacocca, pointing to his head. "You need a little something in here," pointing to his gut.

"The new Chrysler Technology" commercials run on all three networks through Sept. 29. Chrysler estimates it will reach 80 percent of adult viewers through network news, NFL and NCAA football and prime-time TV spots. Kenyon & Eckhardt handles corporate and Chrysler-Plymouth spots.

Dodge media strategy will use high-impact techniques in national TV, cable TV and magazines to gain attention.

Joseph Cadell, general marketing manager - Dodge, noted that 25-to-44-year-olds were the target.

Dodge will use "roadblocks" (scheduling spots at the same time on all networks), "single network nights" (clusters of spots during prime time on a network's strongest night), "billboard programs" (identifying Dodge as host) and "showcasing" (exclusive auto sponsor for network special, mini-series or major movie) to get attention.

• The national print schedule has 54 publications and a total of 117 insertions during the quarter. Publications include news weeklies, general interest, special interest, business and finance, car enthusiast, mechanics, outdoor, women's, regional and miscellaneous.

BBD&O handles Dodge car and truck.

Chrysler media starts with a "buyout" of the "60 Minutes" premier show Sept. 25. Chrysler ads also use regionalization and demographic customization with national publications and to a lesser degree with network TV to tailor ads to specific markets.

Laser announcement runs on "60 Minutes," NFL football, Johnny Carson Anniversary special et. al, plus a new Johnny Miller PGA event on USA Cable.

New Yorker runs on these shows, plus print in news weeklies and upscale business and leisure interest publications.

LeBaron run in demo editions of news weeklies, while Fifth Avenue gets broader print.

Plymouth uses network and cable TV, plus 51 national or regional magazines. NFL Football, Johnny Carson Special and other TV buys are on the list.

Reliant and Horizon use broad print in weeklies and monthlies, like Life, Reader's Digest, Car and Driver.

Turismo 2.2 runs in life-style and special-interest books, like People, Rolling Stones, Cosmopolitan.

Commission formed to offset pressure for protectionism

WASHINGTON. — President Reagan, in an attempt to counter pressure for protectionist laws such as the domestic-content bill for autos now before Congress, has established a 21-member Presidential Commission on Industrial Competitiveness.

John A. Young, president of Hewlett-Packard Co., is chairman of the new commission.

Members with ties to the auto industry include John D. Ong, chairman and president of B. F. Goodrich Co.; Robert Anderson, chief executive officer of Rockwell International Corp., and Stephen L. Schlossberg, former director of government and public affairs with the UAW, and now a partner with the Washington law firm of Zwerdling, Schlossberg, Liebig & Kahn.

The commission, which appears to be the Administration's answer to numerous Democratic calls for a national economic policy, will concentrate on two specific goals, according to the President:

1. Identifying opportunities for private industry to transform new technological information and innovations into saleable goods and services.

2. Recommending policy changes at all levels of government to improve private industry's ability to compete in the U. S. marketplace and to maintain and create opportunities for U. S. workers.

May total is 772,842

Registrations best since early 1980

Continued from Page 7

Chrysler was up 2.20 percentage points, to 10.53 percent from 8.33 percent, and the imports climbed 1.13 percentage points, to 27.85 percent from 26.72 percent.

GM was off 2.86 percentage points, AMC dropped 0.41 percentage points and Ford was off 0.01 percentage points compared with market shares in May, 1982. Miscellaneous domestics all but disappeared, fading to 0.01 percent of the market from 0.06 percent.

(In the Polk tabulation, Renault Alliance is counted as an import; it is not included in the AMC total. Volkswagen Rabbit i. also counted as an import.)

Of the domestics alone, GM products accounted for 61.64 percent this May compared with 64.59 percent a year earlier. Ford claimed 22.80 percent, up from 22.46 percent. Chrysler climbed to 14.60 percent from 11.37 percent. AMC slipped to 0.95 percent from 1.50 percent and miscellaneous domestics held the remaining 0.01 percent compared with 0.08 percent in 1982.

The market class breakdown in May showed imports having the largest single piece of the total, at 27.85 percent (215,278 units), followed by U. S. intermediates at 26.01 percent (201,039 units), compacts at 16.38 percent (126,558 units), standards at 13.83 percent (106,848 units), subcompacts at 10.54 percent (81,427 units) and luxury models at 5.39 percent (41,692 units).

A year earlier, imports had 26.72 percent of the market, followed by intermediates at 23.18 percent, compacts at 18.10 percent, subcompacts at 14.44 percent, standards at 11.74 percent and luxuries at 5.82 percent.

Of the domestics-only market in May, 1983, intermediates claimed 36.06 percent, compacts had 22.70 percent, standards had 19.16 percent, subcompacts had 14.60 percent and luxury models claimed 7.48 percent.

New-car registrations for the first five months of 1983 numbered 3,390,119, up 10.76 percent from 3,060,751 in 1982. The total, however, was 6.95 percent behind the five-month count of 3,643,403 in 1981.

Domestic registrations of 2,375,569 were up 8.62 percent from 2,187,094 in 1982. Imports were up 16.13 percent, to 1,014,550 from 873,657.

For the first five months, Chrysler Corp. and the imports enjoyed market-share increases of 1.15 percentage points and 1.39 percentage points, respectively. Chrysler edged up to 9.85 percent from 8.70 percent and the imports claimed 29.93 percent, up from 28.54 percent.

GM dropped 1.76 percentage points, Ford was off 0.28 percentage points, AMC was down 0.47 percentage points and miscellaneous domestics were down 0.03 percentage points.

In the domestics-only market, GM had 61.27 percent, Ford claimed 23.54 percent, Chrysler had 14.06 percent, AMC had 1.12 percent and miscellaneous makes had 0.01 percent for the first five months of this year.

Alfa Romeo offers no-interest loans on GTV-6 coupes

ENGLEWOOD CLIFFS, N. J. — Thirty - six - month interest-free loans are being offered by participating Alfa Romeo dealers and the importer of GTV-6 sports cars.

The program — pitched at dealerships with the tag line, "We have absolutely no interest" —is aimed at clearing out 1982 models in time for an early launch of 1983 models. Alfa Romeo usually gets its new-model cars to U. S. dealers around the beginning of the calendar year; this time, it will be Oct. 1.

There aren't many GTVs left to clear out, however. Dealer stocks are estimated at fewer than 200.

Qualifying customers may finance up to $13,000 for 36 months on the $18,000 sports coupes through Borg - Warner Acceptance Corp.

Borg-Warner signed with the importer last year to provide financial services for Alfa Romeo dealers. Even non-participating dealers, however, are eligible to sign up for this promotion. A majority of dealers have signed on, Alfa Romeo said.

Dealers and Alfa Romeo split the prepaid interest fee. The program runs through Sept. 30.

Alfa 6 in three versions

Alfa Romeo's flagship, the Alfa 6, will be offered in three new versions: The fuel-injected, 158-HP, V-6, 2.5-liter Gold Cloverleaf; the 2.5-liter, five-cylinder, 105-HP turbocharged diesel, and the carburetted, 135-HP, 2.0-liter V-6. Basically the bodywork of the Alfa 6 has not been changed except for the bumpers and the headlights.

104,249 cars built; all makers report gains

Auto production climbs for week

U. S. auto production rose 12.74 percent last week, boosted by week-to-week increases in output by all major domestic auto makers.

The manufacturers scheduled production of 104,249 cars last week, up from 92,468 the previous week. The total was up 60.50 percent from the 64,954 built during the comparable week in 1982.

Chrysler production trebled last week as the maker had all plants operating.

Ford Motor's Atlanta assembly plant closed last week for inventory adjustment and was scheduled to reopen today (Aug. 15). Ford Dearborn cut back to one-shift operations last week to trim inventories.

Ford's Kansas City (Tempo/Topaz) and Metuchen (Escort/Lynx) plants both worked daily overtime last week. Kansas City is scheduled to work 10-hour daily shifts this week and two overtime shifts this Saturday.

GM scheduled two shifts of Saturday overtime last week at the Flint Plant 40, which assembles the G-body line (Buick Regal).

Down for model changeover last week were GM's Van Nuys (Calif.), Willow Run (Mich.) and Detroit plants. Van Nuys is slated to re-open August 19, while Willow Run and Detroit are scheduled to resume operations on August 22.

GM last week said that it would close its Baltimore assembly plant next March for 20 weeks for renovation and changeover to production of a new vehicle.

Percentage breakdown for last week's production was: GM, 52.11 percent; Ford, 28.04 percent; Chrysler, 11.99 percent; American Motors Corp., 4.17 percent; Volkswagen of America, 2.25 percent, and Honda, 1.44 percent.

Cumulative production was edging toward the four-million mark late last week. Year-to-date, the makers have built 3,951,158 cars, up 21.25 percent from the 3,258,538 built during the equivalent period in 1982.

Four assembly plants win tariff relief on auto parts

WASHINGTON. — The Commerce Department has approved foreign-trade subzone status for four U. S. auto plants.

The plants are Toyota's truck-bed assembly facility in Long Beach, Calif., General Motors' Lakewood and Doraville plants, and a Ford auto plant in Kansas City. Each will qualify for tariff relief on certain imported parts.

The Toyota facility will qualify for deferred duty payments on imported parts and will be charged the same rate as that applied to importers of finished cargo bodies. This duty is lower than that charged for the total of Toyota's imported truck materials. These parts include steel coil, fasteners and decals.

The Ford plant, which produces the new Tempo and Topaz, imports 5 percent of its components including engines, transaxles and radios. The Ford facility will no longer pay duties on its foreign parts when they are used to build export-market autos. On domestic sales, the company will be able to defer duties and pay the same rate available to importers of finished autos.

The average duty rate for Ford's non-U. S. components is 4.6 percent, while the rate for finished autos is 2.8 percent.

GM's two plants will receive relief similar to that enjoyed by Ford. GM's Lakewood plant produces Chevette, while the Doraville facility makes Buick Century and Olds Cutlass Ciera. Foreign content at the Doraville plant is less than 2 percent and includes brake hoses, radios and optional engines. The Chevette plant utilizes 5 percent foreign-sourced parts. These include automatic transmissions, optional diesel engines, solenoids, wiring harnesses, and seat covers.

Exports account for 7.5 percent of Doraville's output, while Lakewood is slated for possible export production. The average duty rate on the foreign parts used at Doraville and Lakewood is 4.4 percent and 3.8 percent, respectively. Both plants will now pay 2.8 percent for finished automobiles.

Seminar planned on CAD/CAM

TROY, Mich. — A seminar on the Medusa CAD/CAM system is planned for Sept. 21 with a repeat on Sept. 22, by Prime Computer, Inc.

Medusa is a computer-aided design package providing two and three-dimensional mechanical design, drafting and documentation. It allows the user to produce drawings for annotation, dimensioning and sectioning. Data can be used to generate parts lists and bills of material, or to interface with programs for analysis and numerical control.

The seminars will be held at Prime's Troy office. Information is available from Prime at (313) 362-0050.

Cook, Pontiac sign

HUTCHINSON, Kans. — J. H. Cook has signed with Pontiac to open Cook Motor Co., Inc.

Truck production dips 3 pct. to 40,013 for week

Production decreases by both GMC and Ford Motor Co. helped pare 3.55 percent from last week's scheduled domestic truck output.

Makers planned assembly of 40,013 trucks, down from the previous week's 41,486 units but a 21.17-percent increase from the 33,022 built during the comparable 1982 week.

All plants were reported open last week except General Motors' Lordstown (O.) van plant, which will be closed until Aug. 16 for model changeover.

No overtime was reported.

Year-to-date, the truck manufacturers have built 1,378,254 trucks, an 8.87-percent hike from the 1,265,897 units assembled during the equivalent period last year.

Canadian output plunges as Ford, GM close plants

Canadian car production plunged 34.73 percent last week as both Ford Motor and General Motors closed assembly plants.

Scheduled output last week was 8,360 cars, down from the 12,809 built the previous week and a 35.66-percent drop from the 12,994 built during the comparable year-ago week.

GM's Oshawa Plant No. 1 closed last week for two weeks; at the same time, Oshawa Plant No. 2 reopened after one week of vacation downtime.

Ford's St. Thomas assembly point closed last week for tooling changes to add production of full-size cars to the Escort/Lynx subcompact cars already built there.

St. Thomas will remain down through August 19, then reopen for three weeks. Final changeover will be completed when St. Thomas closes again from Sept. 12 to Oct. 10.

Year-to-date, the Canadian makers have assembled 608,229 cars, up 19.69 percent from the 550,658 built during the equivalent period last year.

Canadian production of trucks last week increased 12.13 percent on boosts by Ford and GM.

Makers scheduled production of 7,551 trucks, up from 6,734 built the previous week but down 6.66 percent from the 8,090 assemblies of the equivalent 1982 week.

Premiere performance

Renault Encore waiting in wings

The 1984 Renault Encore 5-door and 3-door hatchbacks share the basic platform of the Alliance, as well as its wide range of comfort and luxury options. On three of the Encore's six models, the aerodynamic rear hatch and wraparound glass are accompanied by a spoiler. Story on Page 30.

Chrysler hikes October production schedule

LAS VEGAS.—Responding to complaints of car shortages for the fall, Bennett E. Bidwell, Chrysler executive vice president, told dealers at their national new-car announcement that 50,000 cars are being added to Chrysler's October schedule, with 48,000 going to dealers.

Radio standard on many '84 AMC-Renault models

SOUTHFIELD, Mich. — Radios will be standard equipment on many '84 American Motors-Renault models. All Alliance models except the base two-door, will have an AM radio as standard as will the Jeep Cherokee Pioneer and Chief, the base Wagoneer and all Encore models except the base three-door hatchback. The Jeep Wagoneer Limited will have an AM/FM/stereo radio as standard. An AM/FM/stereo elec-

Japanese makes dominate sales-per-outlet rankings

By Jenny L. King
Staff Writer

The domestic makers were pushed even farther down in the lineup of sales per outlet for the first half of 1983 as four imports—all Japanese—took the top spots.

Toyota, followed by Nissan, Honda and newcomer Mitsubishi, claimed substantially higher sales per franchised outlet than any of the U. S. makes, according to figures compiled by AUTOMOTIVE NEWS.

Oldsmobile stayed in first place among the domestics, where it has been since snatching the crown from Chevrolet in 1981. This year, Chevrolet fell below Buick in average sales per outlet, January through June.

The top 10 makes included only four domestics: Oldsmobile, Buick, Chevrolet and Ford.

Average sales of domestic units per new-car dealer climbed to 162 from 139 in the first half of 1982. Two years ago, the domestic average was 149 sales per outlet.

The imported-car average for the first half of 1983 was 119 sales per outlet. For domestic and import outlets combined, the first half average was 185. Many dealerships handle both imported and domestic cars.

With the dealer population continuing to decline, but at a slower pace, and domestic new-car sales climbing steadily, sales per outlet improved for all five major U. S. auto makers in the first half of 1983. General Motors grew to 196 from 171 last year. Ford Motor Co. dealers improved their average to 140 from 124.

Chrysler Corp. outlets showed a similar gain, climbing to an average of 118 from the year-ago 95 for the first half of the calendar year. Two years ago its dealers averaged 105 sales per outlet.

American Motors' corporate sales per outlet now include all Renault products—both U. S.-built Alliances and imported Fuego, R-18i and LeCar models—along with AMC Spirit, Concord and Eagle units. AMC dealers averaged 75 sales per outlet for the first half of 1983, up from 30 a year earlier when there were no Alliances on the market and Renault imports were not a factor.

Volkswagen's sales per outlet likewise include all VW imports with its U. S.-built products, Rabbits. VW sales per dealer averaged 87 this year compared with 80 a year earlier.

Although Honda now assembles some Accords in this country, the vast majority of its products are imported from Japan and it therefore remains among the imports for the purposes of this survey.

Among the U. S. makes, Oldsmobile pulled farther in front of its competition, its average expanding to 161 from 129 and securing a comfortable lead over second-place Buick's 142-per-outlet average.

A year ago Buick and Chevrolet shared second place among the domestics. This time around, Chevrolet wasn't a contender, its dealers averaging 129 sales per outlet, up slightly from 123 in 1982.

Fourth-place Ford was up to

Diesel problems to the fore

FTC turmoil: GM vs. millions of angry car owners

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — When the five FTC commissioners return from their annual summer recess Sept. 1, they must face a decision involving General Motors and millions of angry car owners.

They must decide whether to accept a consent decree on alleged defects in GM engines and transmissions, or whether to proceed to court.

The FTC voted last April, 3 to 2, to accept the proposed settlement, but it retains the right to change its mind in the wake of the public comment period, which has now ended.

Much of the controversy involves diesel engines.

The case has stirred an extraordinary amount of discussion, dissatisfaction and bitterness. It goes back to 1980, when the FTC Cleveland office filed a complaint against GM, alleging engine and transmission defects which GM failed to disclose to all owners—although it was making fixes for some customers.

Dissatisfaction with the proposal has risen to such great heights as to almost demand a second look—even though final approval of a consent agreement after a public comment period is usually a mere rubber-stamping.

- FTC has several options other than merely accepting the current proposed settlement or dropping the case.
